GRADUATE MEDICAL EDUCATION IN THE UNITED STATES

ANNUAL REPORT AND DIRECTORY OF APPROVED INTERNSHIPS AND RESIDENCIES, AND RÉSUMÉ
OF THE REQUIREMENTS OF EXAMINING BOARDS IN THE MEDICAL SPECIALTIES
PREPARED BY THE COUNCIL ON MEDICAL EDUCATION AND HOSPITALS
OF THE AMERICAN MEDICAL ASSOCIATION

Arthur N. Springall, M.D., John Hinman, M.D., and Willard V. Thompson, M.D.

ANNUAL REPORT

The 31st Annual Report on Internships and Residencies consists of detailed information and statistical data on all intern and resident training programs approved by the Council. Approval is limited to programs in hospitals located in the continental United States, the Canal Zone, Hawaii, and Puerto Rico. The report is composed of statistical tables on internships and residencies with detailed explanations and interpretations; a statement regarding the National Intern Matching Program; a brief description of the Internship Review Committee and the various residency review committees and their activities; a brief paragraph on foreign medical graduates; a statement of policy regarding straight internships; and a résumé.

The Directory of Approved Internships and Residencies is published immediately following the report. The hospitals which offer approved intern training programs are listed according to geographical location. Information given consists of the hospital control, number of hospital beds, number of annual admissions, autopsy rate, length of internship, stipend, and number and types of internships offered. Hospitals are also listed according to types of internships offered. A list of internships in Canada approved by the Canadian Medical Association is included.

The residency section lists the hospitals approved for residency training according to specialties. In addition to the statistical data presented, the names of the chiefs of services are listed, and additional information is included similar to that given in the internship section. A subsequent listing by state and city indicates the specialties for which each hospital is approved.

The entire report is based on detailed information furnished by each hospital approved for intern and/or resident training. The statistical data in the tables represent the intern and resident situations as of Sept. 1, 1956. These figures, therefore, may be in some instances at variance with those presented in the Directory of Approved Internships and Residencies, as the latter refer to appointments beginning July 1, 1958.

The Council acknowledges with gratitude the cooperation and assistance of the medical staffs and the administrators of hospitals listed. The publication of this report was made possible by their furnishing the

Miss Mary A. McGovern and Mrs. Helen Neitzel were responsible for much of the detail work in the preparation of the lists of approved internships and residencies, and the staff of the Machine Records System was responsible for the IBM statistical tabulations.

statistical data requested. The following organizations collaborated with the Council in approving residency programs:

- Advisory Board for Medical Specialties
- American Academy of General Practice
- American Board of Anesthesiology
- American Board of Dermatology
- American Board of Internal Medicine
 - Subspecialty Board on Allergy
 - Subspecialty Board on Cardiovascular Disease
 - Subspecialty Board on Gastroenterology
 - Subspecialty Board on Pulmonary Diseases
- American Board of Neurological Surgery
- American Board of Obstetrics and Gynecology
- American Board of Ophthalmology
- American Board of Orthopedic Surgery
- American Board of Otolaryngology
- American Board of Pathology
- American Board of Pediatrics
 - Subspecialty Board on Allergy
- American Board of Physical Medicine and Rehabilitation
- American Board of Plastic Surgery
- American Board of Preventive Medicine
- American Board of Proctology
- American Board of Psychiatry and Neurology
- American Board of Radiology
- American Board of Surgery
- American Board of Urology
- Board of Thoracic Surgery
- American College of Physicians
- American College of Surgeons

The Annual Report and the lists of approved internships and residencies are reprinted as the Directory of Approved Internships and Residencies. Copies of the reprint will be furnished upon request to the Council.

The Annual Report furnishes information on graduate medical education (internships and residencies) to those interested, including medical students, hospital administrators, medical educators, and other individuals and organizations. The primary purpose of the report is to provide necessary information to young physicians beginning their professional careers who desire to undertake further medical education and training.

INTERNSHIPS

In table 1 there are listed the number of hospitals offering approved internships and the number of internships offered for the past 10-year period. For the intern year beginning July 1, 1956, 852 hospitals offered a total of 11,895 intern positions. These figures represent a decrease of 15 (2%) in the number of hospitals and an increase of 279 (2%) in the number of positions over the preceding year. This number of internships available is the largest number ever offered.

Represented in these figures are the approved internships in hospitals in the continental United States and in its territories and possessions, including one hospital in the Canal Zone, four in Hawaii, and eight in Puerto Rico.

The disparity between the number of American medical school graduates and the number of internships available is increasing. In 1956, there were 6,845 gradu-

TABLE 1.—Approved Hospitals and Internships, 1948-1957

Year of Publication	No. of Hospitals	No. of Internships
1948	807	9,118
1949	807	9,124
1950	799	9,398
1951	828	10,044
1952	865	11,467
1953	856	11,006
1954	844	10,624
1955	850	11,048
1956	867	11,616
1957	852	11,895

ates of approved American medical schools. Therefore, there were approximately 5,000 positions available during the year 1956-1957 which could not be filled by American graduates. An estimated 2,500 of this number were filled by graduates of foreign medical schools. During the past 10 years, the number of hospitals offering approved intern training programs has increased about 6%, while the number of internships offered has increased 31%. During the same period, the number of interns per hospital has increased from 11.3 to 13.9.

Internships, by Type of Service

A breakdown of approved internships according to type of service is given in table 2. Rotating general and rotating with emphasis on a particular service are

TABLE 2.—Number of Internships, by Type of Service, 1956-1957

Type of Internship	No. of Approved Programs	No. of Internships		
		Filled Sept. 1, 1956	Vacant Sept. 1, 1956	Per-centage Filled
Rotating general	809	8,598	1,780	83

* Number of intern training programs in 852 approved hospitals.

included in the category of rotating services. Straight internships include straight service assignments to medicine, surgery, pediatrics, pathology, and obstetrics-gynecology. Mixed internships include those where assignments are made to two or three of the four major services (medicine, surgery, obstetrics, and pediatrics).

For the intern year beginning July 1, 1956, 852 hospitals offered 1,101 approved intern training programs, involving 11,895 intern positions. While the number of internships has increased slightly during the past year, the relative percentage of the three types of internship remains approximately the same. Table 3 represents these percentages for the types of internships for the past five years. Variation during this period has been slight.

On Sept. 1, 1956, 83% of the rotating internships were filled. Mixed internship occupancy increased from 84% in 1955 to 91% in 1956. There was also a

TABLE 3.—Relative Percentage of Types of Internships, 1953-1957

Type of Internship	1953	1954	1955	1956	1957
Rotating	90.0%	88.9%	88.8%	87.9%	87.9%

	100.0%	100.0%	100.0%	100.0%	100.0%

slight increase in the occupancy of the straight internships from 83 to 85%. The over-all occupancy rate for internships on Sept. 1, 1956—83%—was the same as for 1955.

Internships, by Type of Hospital Control

The distribution of internships by type of hospital control is shown in table 4. Forty-two federal hospitals offered 643 positions, or 5.4% of the total number of

TABLE 4.—Number of Internships, by Type of Hospital Control, 1956-1957

* Includes 60 positions assigned to the U. S. Air Force.

internships. Intern positions offered by the 131 non-federal governmental institutions totaled 3,800 (32%). The 670 nongovernmental hospitals accounted for 7,393 positions (62%). The nine proprietary hospitals offered 59 positions (less than 1%).

As in previous years, the highest occupancy rate occurred in the federal hospitals, with an average of 88% positions filled on Sept. 1, 1956; individual federal service figures varied from a low of 58% occupancy in the Veterans Administration hospitals to 100% occupancy in the Army hospitals. The Army figure of 211 positions filled includes 60 internships filled by interns assigned to the Air Force; no Air Force Hospitals conducted intern training programs during the year, Army hospitals being used for training Air Force interns. Occupancy rate for the nonfederal governmental hospitals was 89%, a decrease of 2% from last year's figure; county hospitals had the highest rate (91%) in this group. For the nongovernmental hospitals, the rate was 79%; and that for proprietary institutions was 83%. The over-all occupancy rate for all hospitals offering approved internships was 83%.

Totals	69	694	230	75
Grand totals	852	9,893	2,002	83

The federal hospitals averaged 14.0 interns on duty per hospital; the nonfederal governmental figure was 25.7; for nongovernmental hospitals, 8.8; and for proprietary hospitals, 5.5. The average number of interns on duty per hospital was 11.6, as compared with 11.1 in 1955.

In 1954, 9,066 positions were filled (82%); in 1955, 9,603 positions were filled (83%); and in 1956, 9,893 positions were filled (83%). Internships have increased numerically during the past three years, while the occupancy rate has remained stable.

Internships, by Medical School Affiliation and Bed Capacity

In table 5, hospitals are classified into three categories, based on the degree to which medical schools utilize these hospitals for undergraduate medical education. A "major teaching hospital" is one that is considered by the medical school as being a major unit in its undergraduate clinical clerkship program. The term "minor teaching hospital" refers to a hospital

used to a limited extent for undergraduate training. "Nonaffiliated hospitals" are those which are not designated by a medical school as participating in such a program. This classification is used in this report and in the list of approved internships.

Major teaching hospitals (147) constituted 17% of those approved for internships, offered 4,335 internships, and showed an occupancy rate of 89% on Sept. 1, 1956. The 69 minor teaching hospitals were 8% of the total number of hospitals and were 75% filled on the same date. Nonaffiliated hospitals (636), 75% of the approved hospitals, filled 81% of their positions on Sept. 1, 1956.

The major teaching hospital group had the highest occupancy rate (89%), which was the same as the rate for 1955. Nonaffiliated hospitals increased the rate from 79% in 1955 to 81% in 1956.

As was pointed out in the Annual Report for 1955, there was evidenced a definite trend for the larger hospitals to have a higher percentage of internships

Monthly internship stipends, with federal hospitals excluded. Solid line indicates nonaffiliated hospitals (606), dashed line affiliated hospitals (204). Abscissa gives upper level of stipend range.

filled. This observation is again borne out by the figures shown in table 5. For hospitals of 200 beds or less in all three groups, the combined occupancy rate was 77%; for hospitals having 200 to 299 beds, the rate was the same, 77%; hospitals having 300 to 499 beds indicated that 81% of their positions were filled; and hospitals having more than 500 beds showed a 90% occupancy rate.

Internships, by Census Region and State

Table 6 shows a breakdown by states and regions of the internships on Sept. 1, 1956, with numbers of positions filled and vacant, and the percentage of internships filled quoted in each instance.

Hospitals in United States territories and possessions again showed the highest percentage of filled positions—97%. The New England region had the highest occupancy rate for the continental United States, 89%, which was an increase of 3% over last year's figure. The rate of 72% in the East South Central region was the lowest recorded this year. Individual states having 90% occupancy or higher were New Hampshire (100%), Rhode Island, New Jersey, New York, Kansas, District of Columbia, Louisiana, New Mexico (100%), Oregon, Canal Zone (100%), Hawaii (100%), and Puerto Rico. Lowest rates were those for Montana and North Dakota.

New Mexico offered an approved internship for the first time. Those states which do not have approved intern training programs at the present time are Idaho, Nevada, and Wyoming.

Internship Stipends

Stipends for interns have increased appreciably during the past several years. The average cash stipend paid the intern in affiliated hospitals during 1954 was \$87; in 1955 this figure increased to \$121; the stipend for 1956 increased still further to reach a figure of \$141, an increase of \$20 over 1955. The nonaffiliated hospitals showed a similar increase. Figures for the past three years for non-affiliated hospitals are 1954, \$136; 1955, \$169; and 1956, \$177.

In the figure, the graph portrays the internship stipends for 1956, comparison being made between the affiliated and the nonaffiliated institutions. Federal hospitals are excluded from this graph. The curve shown for each type of hospital is not unlike that for the previous year. Only one hospital reported "No stipend paid"—an affiliated hospital.

Seventy-three per cent of the affiliated hospitals furnished full maintenance, 18% furnished partial maintenance, and 9% furnished no maintenance. Eighty-five per cent of the nonaffiliated hospitals offered full maintenance in addition to the stipend; 12% gave partial maintenance; and 3% indicated no maintenance furnished.

The stipend paid by the nonaffiliated hospital averaged \$36 per month more than was paid by the affiliated hospital. The occupancy rate (Sept. 1, 1956) for the internships offered by nonaffiliated hospitals was 81% compared with a rate of 86% for the affiliated hospitals. These data might be interpreted to mean that the average intern is more interested in other aspects of the internships than he is in the financial return.

In the list of approved internships, under the column headed "Beginning stipend," the letters FM and PM refer respectively to "full maintenance" and "partial maintenance."

Autopsy Rates

The autopsy rate on hospital deaths is regarded by the Council as an index of the scientific interest of the medical staff in medical education and in the progress of medicine. In table 7 the 20 federal hospitals and the 20 nonfederal hospitals reporting the highest rates for the past year are listed. These hospitals are to be commended for maintaining these rates at a high level.

It is of interest to compare this listing with that of previous years and to note that certain institutions have consistently maintained a high rate. Of the federal hos-

18. Virginia Mason Hospital, Seattle.....		77
19. Barnes Hospital, St. Louis.....		76
20. Evanston Hospital, Evanston, Ill.....		76

pitals listed, seven are listed for the sixth consecutive year; of the nonfederal hospitals, six have maintained a place on the list for the past six years.

Of the 852 hospitals reporting, only 5 (less than 1%) failed to meet the minimum autopsy requirements of 25%. These institutions are being urged to increase the rate, as a subminimal rate for two consecutive years may be the basis for withdrawal of approval.

Internship Review Committee

Membership on the Internship Review Committee is composed of representatives from the Council on Medical Education and Hospitals, the Association of

American Medical Colleges, the American Hospital Association, the Federation of State Medical Boards of the United States, and the American Academy of General Practice.

The Committee was formed in 1954 to review reports of surveys of intern training programs and make recommendation to the Council for appropriate action. The Committee also may make recommendations to the Council for changes in the requirements for approval of an internship and for changes in policy concerning the education of interns.

Since the Committee was established, it has advocated that the Essentials of an Approved Internship be interpreted with reasonable flexibility. It has followed the policy of giving a hospital an opportunity to correct deficiencies found on survey before approval is actually withdrawn; the hospital is advised concerning the nature of the deficiencies and is encouraged to correct them as quickly as possible.

The objective toward which the Committee is working is to maintain and improve the standards of medical education at the internship level.

National Intern Matching Program

The National Intern Matching Program continues to serve as the central clearing agency for hospitals seeking interns and for medical students desiring internships. For the past six years, hospitals approved for intern training by the Council on Medical Education and Hospitals and medical students seeking first year internships have used the NIMP as the official agency for intern procurement. The plan gives complete freedom of choice to both hospitals and students and has received continued support from both groups.

Hospitals approved by the Council submit a Hospital Agreement to the Program in which they agree to interview only students who participate in the program and to accept all interns matched to them. Students submit similar agreements, stating they will apply only to participating hospitals and will accept the hospital to which they are matched. Hospitals and students make contact with each other by means of the NIMP Directory. Hospitals receive a Directory of all participating students, and students receive a hospital Directory in which are listed all participating hospitals and the type and number of internships each offers. Hospitals are free to interview as many applicants as possible, using any means of evaluation they desire.

The Matching Program has matched more than 35,000 students with no reported error to date. The policies and general management of the program are governed by the organizations most interested in medical education at the intern level. These organizations include, in addition to the Council on Medical Education and Hospitals, the American Hospital Association, the Association of American Medical Col-

leges, the Catholic Hospital Association, the American Protestant Hospital Association, and the Student American Medical Association. Further assistance is given by liaison representatives from the Army, Navy, Air Force, and the Public Health Service.

The Program covers internships beginning between April 1 and Dec. 31. In Program VI for 1957 internships, 822 hospitals offered 11,804 positions, while 6,923 students participated in the program. Of this number, 6,539 (94%) were matched. 89% of the matched students went to hospitals of their first or second choice. Conversely, 90% of the hospitals received medical students whom they had selected as first or second choice. Hospital and student participation set a new high in Program VI. With continued cooperation and support, the Matching Program will have even greater participation during the coming year.

Straight Internships

According to a resolution introduced by the Reference Committee on Medical Education and Hospitals and adopted by the House of Delegates in June, 1956, the Council was requested to encourage rotating internships rather than straight internships, and was instructed to report to the House on this subject at the next annual session.

In line with these instructions, the Council deferred action on new applications for straight internships until it could make a study of the situation and the status could be clarified. In January, 1957, a letter was sent to the administrator of each hospital offering approved straight internships requesting a statement regarding its attitude toward straight internships and an opinion as to whether they should be discontinued in favor of rotating services. Ninety-two letters were sent out—to 63 hospitals affiliated with medical schools and to 29 nonaffiliated hospitals. Sixty-three replies were received from 46 affiliated hospitals offering 880 straight internships; and from 17 nonaffiliated hospitals offering 71 straight internships. Affiliated hospitals were unanimous in stating that straight internships should not be discontinued. Six of the 17 (35%) non-affiliated hospitals favored elimination of the straight internships. Eighty-five per cent of the replies from affiliated institutions indicated that there is a place for both straight and rotating services, while 59% of the opinions expressed by the nonaffiliated hospitals were indicative of the same attitude. Opinions varied in almost every possible manner. There was even disagreement within individual hospitals. Vehement statements were received from numerous hospitals and individuals protesting the dictatorial attitude of the American Medical Association in attempting to regiment the type of internship.

The complete report of the survey was published in *THE JOURNAL* (164:64 [May 4], 1957). At its meeting in June, 1957, the Council studied this report carefully

and reaffirmed its previous opinion: While it is the opinion of the Council that the best basic education is provided by a well organized and conducted rotating internship, it also believed that straight internships may be justified in the fields of medicine, surgery, pediatrics, and pathology for those medical school graduates who have definitely determined to follow a specialized or academic career. Therefore, the Council recommended that straight internships in medicine, surgery, pediatrics, and pathology be continued. This recommendation was concurred in by the Reference Committee on Medical Education and Hospitals. The Reference Committee also considered a resolution regarding straight internships in obstetrics-gynecology. Previous action taken discontinued straight internships in this field June 30, 1957. The Committee further recommended that consideration be given by the Council to applications for approval of straight internships in obstetrics-gynecology when such programs are of superior educational content and of comprehensive scope. The recommendations of the Reference Committee on Medical Education and Hospitals were adopted by the House of Delegates. The Council was authorized to accept new applications for approval of straight internships in medicine, surgery, pediatrics, pathology, and obstetrics-gynecology. A hospital requesting approval for straight internships in these fields must be approved for resident training in the specialty in which the straight internship is desired. A survey of the proposed program of training will be made by a representative of the Council. The program and the report of survey will then be considered by the Internship Review Committee at its next meeting, and the Council can act upon the recommendation of this Committee.

Foreign Medical School Graduates

According to a survey conducted by the Institute of International Education (*Open Doors, 1957*, New York, The Institute of International Education, 1957) there were 6,741 physicians from 88 countries receiving graduate medical training in approved American hospitals during the year 1956-1957. Of this number, 1,988 were interns, and 4,753 were residents. These figures represent a 12% increase in the number of foreign medical school graduates training in United States Hospitals when compared with last year's figure of 6,033.

The six countries having the largest representation were the Philippines, 1,332; Canada 576; Mexico 556; Turkey 427; Germany 324; and Greece 305.

It is anticipated that the Educational Council for Foreign Medical Graduates will begin full operations shortly. This Council plans to test the knowledge of foreign medical school graduates before they come to the United States for further medical training. Dr. Dean F. Smiley, Secretary of the Association of

American Medical Colleges, has recently been appointed Executive Director of the Educational Council for Foreign Medical Graduates. An announcement concerning the Educational Council and its permanent address will be made soon.

RESIDENCIES

Although the number of approved programs and the number of positions offered increased slightly, the number of hospitals offering approved residencies remained practically constant; it decreased from 1,202 last year to 1,199 this year.

During the past year a Residency Review Committee for Anesthesiology, composed of representatives of the American Board of Anesthesiology and of the Council, was organized. This, with the committees in dermatology, neurological surgery, ophthalmology, orthopedic surgery, pediatrics, physical medicine, preventive medicine, proctology, psychiatry and neurology, radiology, and urology, makes a total of 12 committees representing the appropriate American Boards and the Council; committees in surgery, plastic surgery, and otolaryngology include representatives of the American College of Surgeons, and the Committee for internal medicine includes representatives of the American College of Physicians. The Committee for General Practice is made up of representatives of the American Academy of General Practice and of the Council. Three specialties—obstetrics-gynecology, pathology, and thoracic surgery—remain in which the Council approves programs in concurrence with the board concerned, each organization taking unilateral action.

The following section of the report presents data on the number of residencies by type of hospital control and by bed capacity of the hospital in which the training is conducted. The numbers of residencies filled and vacant represent the situation as of Sept. 1, 1956. The total number of residency appointments available increased from 26,516 reported last year, to 28,528 this year, an increase of 8%. The percentage of residencies filled was 81%, or almost exactly the same as it had been for the two years immediately preceding.

Number of Residencies, by Specialties

Table 8 presents a breakdown by specialties of the number of approved programs, the number of first-year appointments filled and vacant as of Sept. 1, 1956, and the total number of appointments filled and vacant as of the same date. There were 5,134 separate programs, offering 28,528 appointments, of which 11,950 were at the first-year level.

The number of hospitals approved for training varied from one in aviation medicine to 661 offering training in general surgery. Seven specialties—surgery, internal medicine, pathology, obstetrics-gynecology, radiology, psychiatry, and pediatrics—accounted for

more than three-fourths of all residencies offered, with 21,715 positions out of a total of 28,528. There were less than 100 appointments in each of the following fields: allergy, aviation medicine, cardiovascular disease, contagious disease, gastroenterology, malignant disease, plastic surgery, proctology and public health.

The percentage of first-year residencies filled varied from 25% in public health to 100% in aviation medicine. Similarly, for appointments at all levels, the percentage filled in public health was the lowest, 25%, while those in aviation medicine had the highest occupancy rate, 100%.

TABLE 8.—Number of Residencies, by Specialty, 1956-1957

Specialty	No. of Approved Programs	No. of Residencies							
		1st Yr. Appointments				Total Appointments (All Yr.)			
		Filled Sept. 1, 1956	Vacant Sept. 1, 1956	Percentage Filled		Filled Sept. 1, 1956	Vacant Sept. 1, 1956	Percentage Filled

Radiology	394	445	196	69	1,259	434	74		
Surgery	661	1,828	247	88	5,156	604	89		
Thoracic surgery	87	74	13	85	167	24	82		
Urology	218	158	60	60	502	144	79		
Totals	5,134	9,458	2,492	79	23,012	5,516	81		

Of those specialties constituting the majority of residencies offered, pathology, as last year, showed the lowest occupancy rate, 64%, while obstetrics-gynecology showed the highest, 90%. Fields in which less than three-fourths of the appointments offered were filled, included allergy, general practice, neurology, otolaryngology, pathology, physical medicine, proctology, psychiatry, public health, pulmonary disease, and radiology.

In summary, the increase of residency appointments, both absolute and percentage-wise, was greater in 1956-1957 than in 1955-1956, and the percentages of occupancy at all levels remained approximately the same.

Residencies, by Type of Hospital Control

A breakdown of residency appointment by type of hospital control is presented in table 9. Residency programs were offered in 119 federal hospitals, 314 other

TABLE 9.—Number of Residencies, by Type of Hospital Control, 1956-1957

Other	5	40	87	71	55	222	138	62
Grand totals	1,199	5,134	9,458	2,492	79	23,012	5,516	81

with the former having a total of 14,264 appointments, and the latter 14,177. The Veterans Administration offered 3,150 of the 4,249 appointments in federal hospitals.

Number of Residencies, by Hospital Bed Capacities

Excluding hospitals of less than 200 beds the hospitals offering residency training are, roughly speaking, divided into three categories 200-299 bed capacity, 300-499, and over 500 beds (table 10), with about 300 hospitals in each group. Seventy-five hospitals with less than 100 bed capacity and 205 with capacities of 100-199 beds offer approved programs. Approximately 92% of the positions offered are in hospitals of 200 or more bed capacity, and approximately 52% are in hospitals with 500 or more beds.

On the basis of such data as are available, it appears that the number of residencies is generally proportionate to the size of the hospital. However, these data do not eliminate the possibility that an individual hospital or individual service may have a disproportionately large resident staff.

RÉSUMÉ

This 31st Annual Report presents factual data on approved internships and residencies, primarily to assist medical students, interns, and residents in determining where they wish to continue their medical education. The report includes an analysis of statistical tables and graphs, in addition to information regarding the National Intern Matching Program, the Internship and Residency Review Committees, and a discussion of the straight internship. Following the report, complete lists of approved intern and residency training programs are published.

A total of 6,635 training programs at the graduate level (internships and residencies) were offered in 1,372 hospitals on Sept. 1, 1956. Of this number of hospitals, 156 offered approved intern training only; 513 offered approved resident training only; and 703 gave both intern and resident training. The number of approved intern positions has increased from 11,616 to 11,895 (2%) during the past year. Residency positions increased from 26,516 to 28,528 (8%) during the same period.

There was no appreciable change in the percentage of internships filled—83% for this year and also for the previous year. The occupancy rate for residency positions on Sept. 1, 1956, was 81%, as compared with the same figure of 81% for the previous year.

The status of straight internships has been clarified. The Council will continue to approve straight internships in medicine, surgery, pediatrics, and pathology. It will also approve straight internships in obstetrics-gynecology when these programs are of superior educational content and comprehensive scope.

Residency Review Committees are functioning effectively in 16 specialty fields and in General Practice. There are no Residency Review Committees in three specialties. Graduate training has been offered in 29 fields.

The Council has presented this Annual Report in the hope that it will be of assistance to all individuals and organizations interested in medical education at the graduate level.

APPROVED INTERNSHIPS

Council on Medical Education and Hospitals of the American Medical Association
535 North Dearborn Street, Chicago 10

Revised to September 1, 1957

HOSPITALS, 854, INTERNSHIPS, 12,404.

The following general hospitals, investigated and approved by the Council on Medical Education and Hospitals, are considered in position to furnish acceptable intern training in accordance with standards adopted by the American Medical Association. Three types of internships are approved by the Council—rotating, mixed, and straight:

1. A rotating internship is defined as one that provides supervised experience in internal medicine, surgery, pediatrics, obstetrics, and their related subspecialties, together with experience in laboratory and radiologic diagnosis.
2. A mixed internship is defined as one that provides supervised experience in two or more, but not in all, of the clinical divisions named.
3. A straight internship is defined as one that provides supervised experience in a single department, although it may include limited opportunity for work in a related subspecialty. Straight internships are now approved in internal medicine, surgery, pediatrics, pathology, and obstetrics-gynecology.

Hospitals approved for internships that are used by medical schools for undergraduate clinical clerkships on inpatient services have been identified in the following lists by the symbols X and x. Hospitals have been identified with symbol X when a medical school has indicated that the hospital is a major unit in the school's teaching program. Hospitals have been identified with the symbol x when a medical school has indicated that the hospital is used to a limited extent in the school's teaching program. Certain internships in hospitals designated as teaching hospitals may not provide for assignments to teaching services. Other internships may provide for only a portion of the internship period being spent on teaching services. Prospective interns desiring specific information concerning internship assignments to teaching services in a hospital are advised to communicate with the dean of the medical school with which the hospital is affiliated. Medical school affiliations are indicated by footnotes 10 to 89 placed immediately after the symbol X or x. The list of medical schools appears on page 482. The plus (+) sign indicates additional approval for residencies in specialties, as shown in the Council's list of Approved Residencies and Fellowships. The beginning stipends for Federal hospitals have not been listed; they are established in accordance with government pay tables. When applying for internships in Air Force, Army, Navy or Public Health Service hospitals, applications should be directed to the medical departments of the Air Force, Army, Navy, or the United States Public Health Service and not to the individual hospitals. Although applications are made to the service rather than to the individual hospitals, all of the services ask students to list three hospitals in order of preference. Every possible effort is made to place successful candidates in accordance with their desires. Because of the needs of the service it should be understood that students may, in some instances, be assigned to other hospitals than those for which they have indicated a preference.

Hospitals listed below (pages 461 to 481) make first year internship appointments through the National Intern Matching Program, Inc. The number and type of internships as listed represent appointments for the intern year 1958-1959.

Name of Hospital and Location	Control	Total Beds	FEDERAL						Number and Type of Internships	Code Number

Hospitals designated with an asterisk (*) in this listing do not participate in the National Intern Matching Program, sponsored by the American Medical Association, the American Hospital Association, the Association of American Medical Colleges, and other cooperating organizations. Abbreviations and other references will be found on pages 482 and 483.

• HOSPITALS APPROVED FOR INTERNSHIPS IN THE DOMINION OF CANADA

The following list of hospitals that conform to the standards of the Canadian Medical Association is published for the information of graduates interested in an internship appointment in a Canadian hospital. Hospitals that are unqualifiedly approved as conforming to the standards of the Canadian Medical Association may be considered as offering internships equivalent in educational value to those in hospitals approved for intern training by the Council.

This list, revised to Sept. 1, 1956, was furnished by the Canadian Medical Association.

Name of Hospital	Location	Name of Hospital	Location	Name of Hospital	Location
Royal Columbian Hosp.	New Westminster, B. C.	McKeller General Hospital	Fort William, Ont.	Women's College Hospital	Toronto, Ont.
Trail-Tadanac Hospital	Trail, B. C.	Hamilton General Hospital	Hamilton, Ont.	Grace Hospital	Windsor, Ont.
St. Paul's Hospital	Vancouver, B. C.	St. Joseph's Hospital	Hamilton, Ont.	Metropolitan General Hospital	Windsor, Ont.
Vancouver General Hospital	Vancouver, B. C.	Kingston General Hospital	Kingston, Ont.	Hospital St. Luc	Montreal, Que.
Royal Jubilee Hospital	Victoria, B. C.	Kitchener-Waterloo Hospital	Kitchener, Ont.	Jewish General Hospital	Montreal, Que.

APPROVED RESIDENCIES AND FELLOWSHIPS

Council on Medical Education and Hospitals of the American Medical Association

535 North Dearborn Street, Chicago 10

Revised to September 1, 1957

Hospitals, 1,259; Assistant Residencies and Fellowships, 31,252

The following services are approved by the Council on Medical Education and Hospitals as meeting the requirements of the Essentials of Approved Residencies and Fellowships. In those specialties in which certifying boards have been established approval is extended in concurrence with the Board concerned as indicated. The number of years of training for which approval has been granted is indicated in the column, "Length of Approved Program (years)." Residencies in which this designation does not appear have been approved without specifying the number of years for which they are accredited. The beginning stipends for Federal hospitals have not been listed; they are established in accordance with government pay tables.

INDEX TO LIST

1. Allergy	490	10. Neurological Surgery	504	20. Plastic Surgery	583

15. ORTHOPEDIC SURGERY

Type of training acceptable to Board: A—Adult Orthopedics; C—Children's Orthopedics; F—Fractures. Residency programs in the following hospitals have been approved by the Council and the American Board of Orthopedic Surgery, through the Residency Review Committee for Orthopedic Surgery, as offering acceptable training in adult orthopedics, children's orthopedics, and fractures. Training in the basic sciences is given either as an integral part of these services or as a separate course. Services collaborating in an integral plan of training are designated by a program number, a list of which is found on pages 519 and 529.

Residents completing their training in these hospitals are eligible for full certification by the American Board of Orthopedic Surgery, including children's orthopedic surgery.

Residency programs in the following hospitals have been approved by the Council and the American Board of Orthopedic Surgery, through the Residency Review Committee for Orthopedic Surgery, as offering acceptable training in adult orthopedics and fractures. Training in the basic sciences is given as an integral part of these services or as a separate course. Services collaborating in an integral plan of training are designated by a program number, a list of which is found on pages 519 and 520.

Residents completing three years of training in Adult Orthopedics and Fractures at these hospitals are eligible for limited certification by the American Board of Orthopedic Surgery, not to include children's orthopedic surgery.

15. Three months service at Pacific Colony Hospital, Pomona, and three months service in child psychiatry at Camerillo State Hospital.
16. Affiliate services at Colorado General and Denver General Hospitals.
17. Affiliate service at Veterans Administration Hospital, West Haven, Connecticut State Hospital, Fairfield State Hospital, Norwich State Hospital and service in child psychiatry.
18. Twelve months service at Grace-New Haven Community Hospital, New Haven, Connecticut.
19. Six months service at Governor Bacon Health Center, Delaware City.
20. Two months service at George Washington University Hospital, Washington, D. C.
21. Affiliate service at University Hospital, Augusta, Georgia.
22. Twelve month service at the Neuropsychiatric Institute of the University of Illinois including service in child psychiatry.
23. Eighteen months affiliate service including service at the Neuropsychiatric Institute of the University of Illinois and three months in child psychiatry.
24. Affiliate service at Neuropsychiatric Institute of the University of Illinois and service in child psychiatry.
25. Three months service at Veterans Administration Hospital, Downey, Illinois, and service in child psychiatry.
26. Six months service at Veterans Administration Hospital, Hlms, Illinois. May include service in child psychiatry.
27. Six months service in child psychiatry.
28. Integrated program including service at Veterans Administration Hospital, Indianapolis General Hospital and Indiana University Medical Center and Affiliated Hospitals, Indianapolis.
29. Integrated program including service at Veterans Administration Hospital, Menninger Sanitarium and Topeka State Hospital, Topeka, Kansas.
30. Four months service at University of Louisville Services, Louisville, Kentucky, and four months service at Cincinnati General Hospital, Cincinnati, Ohio.
31. Three months service at University of Louisville Services, Louisville, Kentucky.
32. Twelve months service at University of Louisville Services. May include four months service at Central State Hospital; four months service at Louisville General Hospital.
33. Four months service at Central State Hospital and service in child psychiatry.
34. Integrated program including service at Tulane University Unit, Charity Hospital, New Orleans, and Veterans Administration Hospitals, New Orleans, and Biloxi, Mississippi.
35. Six months service in child psychiatry and twelve months service at South Louisiana State Hospital.
36. Service in child psychiatry.
37. Three months service in child psychiatry at Johns Hopkins Hospital (Harriet Lane House), Baltimore, Maryland.
38. Twelve months service at Boston State Hospital and service in child psychiatry.
39. Twelve-eighteen months service at Veterans Administration Hospital, Boston (Jamaica Plain), Massachusetts, and six months service in child psychiatry.
40. Integrated program including service at Massachusetts General Hospital and McLean Hospital, Waverly; may include 1 year training in child psychiatry at James Jackson Putnam Children's Center.
41. Twelve months service at University Hospital, Ann Arbor, Michigan.
42. University Hospital, Ann Arbor, Michigan.
43. Three months service at Coldwater State Home and Training School, Caro State and Ionia State Hospitals and service in child psychiatry.
44. Six months service in child psychiatry at Children's Hospital, Detroit.
45. Six months service at Receiving Hospital, Children's Hospital, Detroit, and Wayne County General Hospital and Infirmary, Eloise, Michigan.
46. University of Minnesota Hospitals, Minneapolis, Minnesota.
47. Three months service at Rochester State Hospital, Rochester, Minn.
48. Affiliate service at Barnes Hospital, St. Louis and three months at St. Louis State Hospital.
49. Six months service at Barnes Hospital, St. Louis, Missouri.
50. Service at St. Louis State Hospital and St. Louis City Hospital.
51. Service at Lutheran Hospital, Omaha.
52. Service at University of Nebraska Hospital.
53. Affiliate service at University of Nebraska Hospital and Creighton Memorial-St. Joseph Hospital, Omaha, Nebraska.
54. Six months service at Newark City Hospital: three months at New Jersey State Hospital and three months in child psychiatry.
55. Three months service at Albany Hospital, Albany, New York.
56. Affiliate services at Edward J. Meyer Memorial Hospital and Buffalo State Hospital.
57. Six Months service at King's County Hospital, Brooklyn, New York.
58. Integrated program with service at Bellevue Hospital Center and University Hospital.
59. Six months service at Mount Sinai Hospital, New York City.
60. Service in child psychiatry. May include six months service at Mount Sinai Hospital and three months at Manhattan State Hospital.
61. Twelve months service at New York Hospital and four months at Veterans Administration Hospital, New York City (Bronx), New York.
62. Three months service at Grasslands, Rockland State, Albany Hospitals and Letchworth Village.
63. Six months service at Rochester State Hospital, Rochester, New York.
64. Six months service at Strong Memorial-Rochester Municipal Hospitals, Rochester.
65. Affiliate service at Strong Memorial-Rochester Municipal Hospitals.
66. Three months service at Syracuse Memorial, Binghamton, Syracuse and Willard State Hospitals, service at Craig Colony and service in child psychiatry.
67. Affiliate service at State Hospitals at Raleigh and Butner, North Carolina.
68. Eighteen months service at Duke Hospital, Durham, North Carolina.
69. Three months service at Longview State and Jewish Hospitals, Cincinnati.
70. Integrated program including service at Cleveland Clinic and Windsor Hospital.
71. Integrated program including service at University Hospital and Veterans Administration Hospital, Cleveland, Ohio.
72. Integrated program with service at Institute of the Pennsylvania Hospital and Pennsylvania Hospital Department for Mental and Nervous Diseases.
73. Affiliate service at Temple University Hospital, Institute of Pennsylvania, Hospital of the Woman's Medical College of Pennsylvania.
74. Six months service at Philadelphia General Hospital and service in child psychiatry.
75. Two months affiliate service for institutional care.
76. Integrated program including service at Vanderbilt University Hospital, Veterans Administration Hospital, Nashville, Veterans Administration Hospital, Murfreesboro, and Central State Hospital, Nashville.
77. Four months affiliate service at St. Mary's Infirmary, Galveston, Texas.
78. Service in child psychiatry at Jefferson Davis Hospital, Houston, Texas.
79. Six months affiliate service at Veterans Administration Hospital, Salt Lake City, Utah, and affiliate services at State Hospital, Provo, Utah.
80. Integrated program including service at University of Virginia Hospital, Charlottesville and Veterans Administration Hospital, Roanoke, Va.

25. RADIOLOGY

Residency programs in the following hospitals have been approved by the Council and the American Board of Radiology, through the Residency Review Committee for Radiology. These programs are approved for THREE years of training in all phases of Radiology. All programs listed offer three years of training intramurally, or on an integrated basis, or through affiliation with another approved institution. Hospitals listed with the following symbol (#) are approved and offer training of three years intramurally, in addition to participating in an integrated residency program.

Veterans Admin. Hospital 1-3	Pittsburgh	F. C. Jackson	1,784	60	7	19	...
Western Pennsylvania Hospital 1-3	Pittsburgh	G. V. Foster	9,591	92	3	11	225
Robert Packer Hospital 1-3	Sayre, Pa.	D. Guthrie	3,755	38	2	6	200
York Hospital 1-3	York, Pa.	F. M. Weaver	6,233	50	1	4	225
Rhode Island Hospital 1-3	Providence, R. I.	J. M. Beardsley	4,748	68	2	8	100
Veterans Admin. Hospital 1-3-343	Providence, R. I.	H. W. Harrower	2,332	31	4	12	...
Medical College of South Carolina Teaching Hospitals 1-3	Charleston, S. C.						
Greenville General Hospital 1-3	Greenville, S. C.	F. E. Kredel	2,435	86	4	14	137
Baptist Memorial Hospital 1-3-344	Memphis, Tenn.	R. Thomason	5,797	75	1	4	250
City of Memphis Hospitals 1-3	Memphis, Tenn.	R. M. Miles	9,510	59	2	7	260
Veterans Admin. Hospital 1-3	Memphis, Tenn.	H. Wilson	2,221	42	3	13	125
George W. Hubbard Hospital 1-3	Memphis, Tenn.	R. F. Bowers	3,264	49	11	23	...
Nashville General Hospital 1-3	Nashville, Tenn.	M. Walker	1,797	30	3	13	125
Vanderbilt University Hospital 1-3	Nashville, Tenn.	O. F. Noel	1,584	27	3	9	200
Veterans Admin. Hospital 1-3	Nashville, Tenn.	H. W. Scott, Jr.	2,921	31	4	14	50
Baylor University Hospital 1-3	Nashville, Tenn.	R. I. Carlson	2,823	44	3	19	...
Parkland Memorial Hospital 1-3	Dallas, Texas	J. W. Duckett	3,496	24	3	9	160
Veterans Admin. Hospital 1-3-350	Dallas, Texas	B. Wilson	2,330	65	9	25	125
University of Texas Medical Branch Hospitals 1-3	Dallas, Texas	J. P. North	1,360	22	5	14	...
Baylor University College of Medicine Affiliated Hospitals	Galveston, Texas	R. M. Moore	1,445	16	6	18	160
Jefferson Davis Hospital 1-3	Houston, Texas	M. E. DeBakey	1,903	49	6	20	75
Methodist Hospital 1-3	Houston, Texas	L. L. D. Tuttle	2,045	49	1	4	100
Veterans Admin. Hospital 1-3	Houston, Texas	G. L. Jordan, Jr.	1,213	63	6	15	...
Hermann Hospital 1-3	Houston, Texas	G. W. Waldron	5,549	53	2	8	100
Veterans Admin. Hospital 1-3	McKinney, Texas	J. P. North	1,184	18	3
Dr. W. H. Groves Latter-Day Saints Hospital 1-3	Salt Lake City	V. L. Rees	5,665	37	2	8	225
Salt Lake County General Hospital 1-3	Salt Lake City	R. C. Richards	1,068	16	3	12	150
Veterans Admin. Hospital 1-3-359	Salt Lake City	J. A. Gubler	376	14	2	9	...
University of Vermont Affiliated Hospitals							
De Goesbriand Memorial Hospital 1-3	Burlington, Vt.	A. A. Gladstone	959	17	1	3	180
Mary Fletcher Hospital 1-3	Burlington, Vt.	A. G. Mackay	2,219	37	2	8	167
University of Virginia Hospital 1-3	Charlottesville, Va.	W. H. Muller, Jr.	2,116	33	7	17	50
Chesapeake and Ohio Hospital 1-3	Clifton Forge, Va.	J. M. Emmett	3,030	24	4	10	200
Norfolk General Hospital 1-3	Norfolk, Va.	R. L. Payne, Jr.	2,855	29	4	8	125
Medical College of Virginia—Hospital Division 1-3-373	Richmond, Va.	D. M. Hume	4,901	76	7	23	...
Veterans Admin. Hospital 1-3	Richmond, Va.	R. F. MacDonald	2,067	31	2	8	...
King County Hospital Unit No. 1 (Harborview) 1-3	Seattle	H. N. Harkins	1,750	33	4	12	125
Veterans Admin. Hospital 1-3	Seattle	J. W. Bell	1,311	66	4	13	...
Virginia Mason Hospital 1-3	Seattle	J. W. Baker	4,833	60	3	11	150
University Hospitals 1-3	Madison, Wis.	E. R. Schmidt	2,434	94	4	16	100
Milwaukee County Hospital 1-3	Milwaukee	J. M. King	2,564	93	8	20	207
Milwaukee Hospital 1-3-375-379	Milwaukee	I. Schulz	4,293	37	1	6	245
Veterans Admin. Hospital 1-3	Milwaukee (Wood), Wis.	M. B. Smith	2,594	36	3	15	...
San Juan City Hospital 1-3	San Juan, P. R.	J. N. Benitez	2,371	37	2	8	300

Residency programs in the following hospitals have been approved by the Council, the American Board of Surgery and the American College of Surgeons, through the Conference Committee on Graduate Training in Surgery, for THREE years of training, designed to qualify the trainees for examination by the American Board of Surgery as a Group II candidate.

Hospitals, 202; Assistant Residencies and Residencies, 1219

UNITED STATES ARMY							
William Beaumont Army Hospital	El Paso, Texas	R. T. Gants	2,192	10	2	6	...
UNITED STATES NAVY							
U. S. Naval Hospital 1-3	Great Lakes, Ill.	H. H. Eighthy	2,025	3	1	3	...
UNITED STATES PUBLIC HEALTH SERVICE							
U. S. Public Health Service Hospital 1-3	New Orleans	J. L. Elliott	3,412	15	1	3	...
U. S. Public Health Service Hospital 1-3	Baltimore	H. D. Fishburn	2,929	55	2	6	...

26. SURGERY—Continued

Name of Hospital	Location	Chief of Service	Inpatients Treated	Autopsies	First Year Residents Offered ^s	Total Residents Offered ^s	Beginning Stipend (Month)
Flushing Hospital and Dispensary 1-3-258	Flushing, N. Y.	C. N. Baker	4,689	22	1	4	175
Jamaica Hospital 1-3-258	Jamaica, N. Y.	E. J. Patterson	2,073	13	4	10	200
Mary Immaculate Hospital 1-3-258	Jamaica, N. Y.	V. Juster	2,715	25	3	9	160
Charles S. Wilson Memorial Hospital 1-3	Johnson City, N. Y.	D. D. Smith	3,715	19	1	3	225
Mount Vernon Hospital 1-3	Mount Vernon, N. Y.	J. Bagg	2,162	23	1	3	125
New Rochelle Hospital 1-3	New Rochelle, N. Y.	G. C. Adie	6,835	45	2	6	225
Fordham Hospital 1-3	New York City	H. H. Jones	2,467	20	1	3	104
42nd Street Beth David Hospital	New York City	L. Breidenbach	2,654	32	1	4	125
French Hospital 1-3	New York City	H. B. Keyes	2,041	25	2	6	50
Morrisania City Hospital 1-3	New York City	R. J. Azzari	1,191	14	2	4	104
St. Francis Hospital 1-3	New York City	C. R. Ackerman-T. McCarthy	2,173	2	3	4	125
Sydenham Hospital 1-3	New York City	S. Standard	1,749	31	2	5	105
Highland Hospital	Rochester, N. Y.	T. B. Garlick	4,443	89	3	7	225
Ellis Hospital 1-3	Schenectady, N. Y.	S. F. MacMillan	6,068	42	1	3	150
White Plains Hospital 1-3	White Plains, N. Y.	E. G. Ramsdell	3,501	14	1	4	250
Charlotte Memorial Hospital 1	Charlotte, N. C.	A. G. Brenizer, Jr.	2,041	8	1	2	200
Lincoln Hospital 1-3	Durham, N. C.	H. M. Schiebel	738	21	1	3	350
Rex Hospital 1	Raleigh, N. C.	J. Rhodes	2,421	22	1	3	300
City Memorial Hospital 1-3	Winston-Salem, N. C.	H. M. Starling	4,049	53	6	12	275
Aultman Hospital 1-3	Canton, Ohio	W. R. Farrar	6,343	51	4	16	200
Mercy Hospital 1-3	Canton, Ohio	L. B. Schumaker	3,733	27	2	5	200
Christ Hospital 1	Cincinnati	E. A. Kindel	2,470	13	3	9	250
Good Samaritan Hospital 1-3-308	Cincinnati	E. J. Bender	2,210	56	5	12	145
Jewish Hospital 1-3-308	Cincinnati	A. Grollman	6,154	5	1	3	150
Evangelical Deaconess Hospital 1-3	Cleveland	J. H. Lazzari	2,888	38	2	6	250
Lutheran Hospital 1-3	Cleveland	M. M. Driver	3,927	5	2	6	170
St. John's Hospital	Cleveland	J. E. Hannibal	1,646	48	1	3	275
Mount Carmel Hospital 1	Columbus, Ohio	W. H. Teachnor	5,919	25	2	6	200
Miami Valley Hospital 1-3	Dayton, Ohio	M. T. Hoerner	3,522	7	3	6	200
Marymount Hospital 1-3	Garfield Heights, Ohio	W. E. Mishler	2,680	28	4	9	200
Lakewood Hospital 1-3	Lakewood, Ohio	N. W. Thiessen	4,495	30	1	4	325
St. Rita's Hospital 1-3	Lima, Ohio	C. H. Leech	5,574	31	2	4	210
Maumee Valley Hospital 1-3	Toledo, Ohio	R. Hotz	655	46	1	3	275
Mercy Hospital 1-3	Toledo, Ohio	H. L. Hauman	5,443	54	2	5	275
St. Vincent's Hospital 1-3	Toledo, Ohio	B. G. Shaffer	5,789	34	1	3	250

University Hospitals 1-3	Madison, Wis.	J. B. Wear	572	8	1	4	100
Milwaukee County Hospital 1-3	Milwaukee	R. S. Irwin	588	18	..	2	207
Veterans Adm'n. Hospital 1-3	Milwaukee (Wood), Wis.	R. S. Irwin	907	25	1	4	..
San Juan City Hospital 1-3	San Juan, P. R.	L. A. Sanjurjo	331	..	1	2	300

NUMERICAL AND OTHER REFERENCES

- Appointments available to women applicants.
- Appointments available to women applicants only.
- Appointments available to graduates of foreign medical schools.
- Includes fellowships.
- Training at the third year level only.
- May include one year fellowships in the Department of Cardiology.
- May include one year of training at Cook County Hospital, Chicago, by special arrangement.
- May include one year of surgical research at Louisiana State University School of Medicine.
- Training limited to Contagious Diseases.
- Approved for affiliate training only.
- Formerly New York City Hospital, New York, N. Y.
- Combined integrated program—Bellevue, Div. II (Cornell and Memorial Cancer Center)
- Training in pediatric psychiatry (third year level)
- To include one year of affiliate training at the second year level at the University Hospitals (Lakeside) Cleveland.
- This one year of training is equivalent to one year of basic science as a part of an approved three year program.
- University of Texas coordinates program of three years' duration.
- An additional one year of fellowship training in cardio-pulmonary laboratory is available.
- Includes one year of training at Veterans Administration Hospital, Iowa City
- Provides training at the third year level, affiliate training with University of Minnesota Hospitals, Minneapolis, Minn.
- Approved for affiliate training only.
- Obstetrical and Gynecological pathology only.
- Special pathology as a part of pathologic anatomy. See Board requirements.
- Category P. Am. Bd. of Pathology. See Page 584.
- LaRabida Sanitarium, Lewis Memorial Maternity Hospital, Municipal Contagious Disease Hospital, St. Joseph Hospital, St. Vincent's Hospital, Chicago.
- Methodist Hospital and St. Francis Hospital Divisions.
- Approved for one year of training in Hematology as a part of or addition to the residency training program in Internal Medicine.
- Affiliate rotation at Yale-New Haven Medical Center, Grace-New Haven Community Hospital.
- Six months of training is afforded at University Hospitals, Iowa City, Iowa.
- Offer training at the third year level only.
- Provides training at the 3rd year level, affiliated with University of Minnesota Hospital, Minneapolis, Minn.
- Includes one year of training at Parkland Memorial Hospital, Dallas, Texas.
- Approved for training at the first year level.
- One year affiliation available at Veterans Adm'n. Hospital, Iowa City, Iowa.
- Approved for one year of training equivalent to one year of basic science as a part of an approved three year program.
- Approved Category P. Residents interested should consult Page 584.
- Approved Category M. Residents interested should consult Page 584.
- Approved Category H. Residents interested should consult Page 584.
- Approved Category N-1. Residents interested should consult Page 584.
- Includes one year fellowship in the cardiopulmonary laboratory.
- Provides one year of training at third year level as part of three year program at City of Memphis Hospitals.
- Includes one year of training at State University of Iowa Hospitals, Iowa City, Iowa.

REQUIREMENTS FOR CERTIFICATION

AMERICAN SPECIALTY BOARDS

Examining and certifying boards in 19 specialties have been approved by the Council on Medical Education and Hospitals of the American Medical Association and the Advisory Board for Medical Specialties on the basis of minimal standards governing accreditation of specialty boards as formulated by the Council.

The primary purposes of the boards are (1) to conduct investigations and examinations to determine the competence of voluntary candidates for certificates issued by the respective boards, (2) to grant and issue certificates of qualification to candidates successful in demonstrating their proficiency, (3) to stimulate the development of adequate training facilities, (4) to aid in evaluating residencies and fellowships under consideration by the Council on Medical Education and Hospitals of the American Medical Association, and (5) to advise physicians desiring certification as to the course of study and training to be pursued.

The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, or a license to practice medicine or a specialty. The boards do not purport in any way to interfere with or limit the professional activities of any licensed physician, nor do they desire to interfere with any practitioners of medicine in any of their regular or legitimate duties.

Two boards certify candidates in subspecialties. The American Board of Internal Medicine certifies in allergy, cardiovascular disease, gastroenterology, and pulmonary diseases. The American Board of Pediatrics certifies in allergy. Certification in the primary field is a requirement for certification in the subspecialties. The Board of Thoracic Surgery, which is organized as an affiliate board of the American Board of Surgery, requires certification in surgery as a prerequisite to certification in thoracic surgery.

Certificates in special divisions of their specialty are conferred by six boards. The American Board of Obstetrics and Gynecology will issue certificates in obstetrics or gynecology only. The American Board of Otolaryngology grants a limited certificate in endoscopy. The American Board of Pathology issues certificates in pathological anatomy, clinical pathology, a combination of these two fields, pathological anatomy and clinical microbiology, clinical microbiology and clinical chemistry, clinical bacteriology, neuropathology, clinical microbiology, hematology, and clinical chemistry. The American Board of Preventive Medicine issues certificates in public health, aviation medicine, and occupational medicine. The American Board of Psychiatry and Neurology issues separate certificates in psychiatry and in neurology, or a combined certificate for those qualified in both fields. This board also issues supplementary certificates in psychiatry and in neurology. The American Board of Radiology issues certificates in radiology, roentgenology, therapeutic radiology, diagnostic roentgenology, therapeutic roentgenology, radium therapy, radiological physics, x-ray and radium physics, and medical nuclear physics.

The majority of the American specialty boards have published booklets containing a list of their officers together with statements regarding organization, purposes, and qualifications that determine eligibility for certification. In this issue of THE JOURNAL, there are published, with the consent of each board concerned, the requirements for certification in specialties. This information is published for the convenience of those physicians who are planning to seek board certification. Any specific inquiry concerning certification by a specialty board should be addressed to the board secretary, whose name and address will be found in this issue of THE JOURNAL.

Table I contains a list of the approved specialty boards, the year of activation, and the total number of candidates certified through June 30, 1957. Data are also presented regarding the number of physicians certified in the subspecialties and those granted special certification by the boards in obstetrics and gynecology, otolaryngology, pathology, preventive medicine, psychiatry and neurology, and radiology.

TABLE I.—Approved Examining Boards in Medical Specialties

Name of Board	Year of Activation	Total Certificates Awarded to June 30, 1957
American Board of Anesthesiology	1937	1,698
American Board of Dermatology	1932	1,806
American Board of Internal Medicine	1936	11,336
American Board of Neurological Surgery	1940	715
American Board of Obstetrics and Gynecology	1930	5,258
American Board of Ophthalmology	1915	4,642
American Board of Orthopaedic Surgery	1934	2,876
American Board of Otolaryngology	1924	5,250
American Board of Pathology	1936	3,283
American Board of Pediatrics	1933	6,089
American Board of Physical Medicine and Rehabilitation	1947	322
American Board of Plastic Surgery	1937	386
American Board of Preventive Medicine	1948	1,915
American Board of Proctology	1949	259
American Board of Psychiatry and Neurology	1934	5,885
American Board of Radiology	1934	5,654
American Board of Surgery	1937	8,790
Board of Thoracic Surgery (Affiliate of the American Board of Surgery)	1949	677
American Board of Urology	1935	2,310
Totals		69,151
Certification in Subspecialties		
American Board of Internal Medicine

X-ray and Radium Physics		16
Medical Nuclear Physics		6
Totals		5,654

* Independent board established in 1949.

A total of 63,727 physicians were reported certified by the 19 specialty boards on July 1, 1956. From this date through June 30, 1957, 5,424 physicians were certified, bringing the total to 69,151 certifications on June 30, 1957. Eighty-six physicians were certified in the subspecialties, bringing that total to 1,509 on the same date.

Table 2 indicates the total number of physicians certified each year for the past 15 years by all specialty boards. The total number certified on June 30, 1957, was 69,151.

The eighth edition of the "Directory of Medical Specialists," compiled by the Advisory Board for Medical Specialties and published in 1957 by the A. N. Marquis Company, Chicago, contains biographic information on the educational background of each living specialist, including those retired from practice, certified by an American board.

AMERICAN BOARD OF ANESTHESIOLOGY

DONALD L. BURDICK, President
New York

FREDERICK P. HAUGEN, Vice President
Portland, Ore.

STUART C. CULLEN, Iowa City

ROBERT B. DRIPPS, Philadelphia

ALBERT FAULCONER, Rochester, Minn.

FORREST E. LEFFINGELL, Pasadena, Calif.

E. M. PAPPER, New York

MILTON C. PETERSON, Kansas City, Mo.

HARVEY C. SLOCUM, Washington, D. C.

SCOTT M. SMITH, Salt Lake City

CURTISS B. HICKCOX, Secretary-Treasurer, 80 Seymour St.,
Hartford, Conn.

The regulations of this specialty board are undergoing revision at this time. For current requirements for certification, communications should be addressed to the Secretary of the American Board of Anesthesiology.

TABLE 2.—Annual Specialty Board Certification, 1942-1957

Year (Ended March)	No. of Boards in Existence	No. Certified	Cumulative Totals
1942	15	1,756	19,694
1943	15	2,172	21,866
1944	15	1,578	23,444
1945	15	1,308	24,752
1946	15	1,320	26,072
1947	15	2,424	28,496
1948	16	3,002	31,498
1949 (June 30)	19*	4,479	35,977
1950 (June 30)	19	3,827	39,804
1951 (June 30)	19	4,552	44,356
1952 (June 30)	19	4,118	48,474
1953 (June 30)	19	4,022	52,496
1954 (June 30)	19	4,183	56,679
1955 (June 30)	19	3,843	60,522
1956 (June 30)	19	3,083	63,605
1957 (June 30)	19	5,424	69,151

* One board, the American Board of Proctology, did not certify any candidates during this period.

AMERICAN BOARD OF DERMATOLOGY

JOHN H. LAMB, President
Oklahoma City

J. LAMAR CALLAWAY, Vice President
Durham, N. C.

MARCUS R. CARO, Chicago

ARTHUR C. CURTIS, Ann Arbor, Mich.

CLINTON W. LANE, St. Louis

FRANCES W. LYNCH, St. Paul

J. WALTER WILSON, Los Angeles

BEATRICE MAHER KESTEN, Secretary, 1 Haven Ave., New York
32, N. Y.

WALTER C. LOBITZ JR., Assistant Secretary, Hanover, N. H.

For current requirements for certification, communications should be addressed to the Secretary of the American Board of Dermatology.

AMERICAN BOARD OF INTERNAL MEDICINE

THOMAS M. DURANT, Chairman, Philadelphia

HOWARD P. LEWIS, Vice-Chairman, Portland, Ore.

WRIGHT R. ADAMS, Chicago

THOMAS H. BREM, Los Angeles

GEORGE E. BURCH, New Orleans

HUGH R. BUTT, Rochester, Minn.

FRANKLIN M. HANGER, New York

CHESTER M. JONES, Boston

JOHN MINOR, Washington, D. C.

GEORGE A. PERERA, New York

ALBERT M. SNELL, Palo Alto, Calif.

VICTOR W. LOGAN, Rochester, N. Y.

THOMAS FINDLEY, Secretary-Treasurer, Augusta, Ga.

WILLIAM A. WERRELL, Executive Secretary-Treasurer,
1 W. Main St., Madison, Wis.

Sub-Specialty Boards

ALLERGY

VINCENT J. DERBES, New Orleans

SAMUEL M. FEINBERG, Chicago

STANLEY F. HAMPTON, St. Louis

FRANCIS C. LOWELL, Boston

WILLIAM B. SHERMAN, New York

CARDIOVASCULAR DISEASE

CHARLES A. R. CONNOR, New York

A. CARLTON ERNSTENE, Cleveland

FRANK B. KELLY SR., Chicago

J. MURRAY KINSMAN, Louisville, Ky.

BRUCE LOGUE, Atlanta, Ga.

RICHARD H. LYONS, Syracuse, N. Y.

RAYMOND D. PRUITT, Rochester, Minn.

GASTRO-ENTEROLOGY

LEON SCHIFF, Cincinnati

LOWELL D. SNORF, Evanston, Ill.

HENRY J. TUMEN, Philadelphia

C. WILMER WIRTS, Philadelphia

ERIC E. WOLLAEGER, Rochester, Minn.

PULMONARY DISEASES

ALVIS E. GREER, Houston, Texas

ROGER S. MITCHELL JR., Denver

EDWARD S. RAY, Richmond, Va.

DAVID T. SMITH, Durham, N. C.

JULIUS L. WILSON, Philadelphia

GENERAL QUALIFICATIONS

1. All candidates must be citizens of the United States or Canada.

2. All candidates must be licensed to practice medicine in a state, territory, or possession of the United States or Canada.

3. All candidates must present evidence of satisfactory moral and ethical standing in the medical profession.

PROFESSIONAL QUALIFICATIONS

1. Graduation from a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association at the date of graduation.

2. Satisfactory completion of an approved internship of not less than twelve months.*

3. Residency or fellowship approved by the Council on Medical Education and Hospitals of the American Medical Association in internal medicine according to the following plan (Plan A) or one of the alternate plans described under paragraph 4.

*During the period in which the 9-9-9 program was in effect an approved internship of nine months will satisfy the requirement of twelve months. A residency of nine months is considered as nine months only.

(Plan A) A residency or fellowship in internal medicine for a period of not less than three years in a hospital or other institution approved by the Council on Medical Education and Hospitals of the American Medical Association for residency or fellowship in internal medicine. In such instances in which a resident's nominal status differs from that of the other hospital residents, he must furnish the Board with certification by the Chief of the Medical Service and the Medical Director of the Hospital that he actually performed the full duties of a resident as a bonafide member of the residency program. In addition, two years of adequate clinical experience in the practice of internal medicine following graduate training will be required. The Board will accept the following equivalents as satisfying one year only, of the three years of residency or fellowship to which this paragraph refers. (Two years must be in the field of general internal medicine.)

(a) If twelve months of a two year approved internship in a hospital approved for residency training in internal medicine is limited to the medical service and the medical specialties, credit will be granted for a first year of assistant residency. The remaining two years of residency training must be in the general field of internal medicine. Certification by the Chief of the Medical Service as to compliance with this requirement must accompany application.

(b) One year of approved residency in one of the medical specialties: Allergy, Cardiovascular Disease, Gastro-Enterology, Hematology, Pathology, Pulmonary Diseases, Neurology, Pediatrics, Psychiatry, Dermatology and Syphilology, or one year of an approved General Practice residency provided the candidate completes in addition, two full years of approved residency in the general field of internal medicine.

(c) One year as a graduate student or as an instructor in an approved medical school on a full time basis in Bacteriology, Biochemistry, Pathology, Pharmacology, Physiology, or Internal Medicine.

(d) An advanced degree in the Medical Sciences, provided the work has been done and the degree obtained after graduation from medical school.

NOTE: Graduate training credit for the time involved will be allowed candidates who take and satisfactorily complete post-graduate courses in internal medicine or the basic medical sciences provided by accredited medical schools on a full time basis. This ruling shall not apply to courses of less than three months or more than twelve months duration. A certification of credit performance, based in part, at least, on a formal examination upon completion of the course, will be required.

NOTE: Fellowship or Research assignments not approved by the Council on Medical Education and Hospitals will require certification by the Chief of Service that such assignment was equivalent in graduate training opportunities and patient responsibilities to that of an approved residency in internal medicine or the sub-specialties recognized by this Board. This certification must be presented before application is filed.

4. Alternate Training Plans: The Board firmly believes that the plan of intensive training prescribed above offers the best opportunity for a young physician to prepare himself to meet his responsibilities as a specialist in internal medicine. It is recognized, however, that capable individuals may accomplish the same result in a longer period of time during which the training is less intensive. The Board realizes that a number of medical graduates cannot follow the shorter and more desirable plan either because suitable residencies are not available, or in some instances because of personal and economic reasons. Accordingly the Board has modified its previous regulations governing eligibility for admission to examination. In doing so the Board has not modified its standards of examination. It has liberalized its eligibility requirements for admission to examination by accepting half-time formal training, and the practice of internal medicine under circumstances favorable as to professional and hospital contacts, in lieu of part of the full-time requirements. It is hoped that by this means exceptional individuals may acquire a knowledge of medicine and experience in its application sufficient to qualify for examination.

The program previously described (Plan A), which consists of three years of formal training in an approved residency or its equivalent, following internship, and followed by two addi-

tional years in the practice of internal medicine, is recommended by the Board. Variations in this program are now subject to the following regulations.

(a) In all instances, one year of approved internship and one year of approved residency will be required, except as indicated under Plan "G." The graduate training credit of one year heretofore granted as a result of active duty as a commissioned officer in the Armed Forces during the period beginning December 7, 1941, and ending January 1, 1947, and during the Korean emergency beginning June 1, 1950, and ending July 1, 1954, may not be applied in satisfaction of the one year of approved residency referred to in Plans D, E, F, unless the candidate's assignment is considered by the Board to have been equivalent to an approved residency.

(b) Following one year of internship and two years of approved residency, the remaining requirements may be satisfied by:

(Plan B) That is, by two years of half-time formal training followed by two years of practice limited to internal medicine, or by

(Plan C) That is, by five years of practice limited to internal medicine.

(c) Following one year of internship and one year of approved residency, the remaining requirements may be satisfied by:

(Plan D)* That is, by four years of half-time formal training followed by two years of practice limited to internal medicine, or by,

(Plan E)* That is, by two years of half-time formal training followed by five years of practice limited to internal medicine, or by

(Plan F) That is, by eight years of practice limited to internal medicine.

(d) (Plan G) Physicians who have practiced internal medicine for twelve years following an approved internship may qualify for the examinations without further training.

(e) (Plan H) In order to liberalize the opportunity for adequate training in terms of the requirements of this Board, a special plan (Plan H) has been designed for those men who have been specially selected for a career in academic medicine. This plan is as follows:

"Admission to the written examination will be granted to a candidate affiliated with a Class A medical school in the United States or Canada who is recommended by the Head of the Department of Medicine of the Medical School as being adequately trained in Internal Medicine, provided the candidate has had at least five years of training following an approved internship. This training must have included direct responsibility for patient care in the broad field of internal medicine. This plan is designed for men who contemplate a career in academic medicine."

It will be the responsibility of Heads of Departments of Medicine to affirm to the American Board of Internal Medicine that the candidate is qualified for admission to examination after a minimum of five years of training. It may well be that the Head of the Department will require additional years of training beyond the minimum before stating the qualifications of the candidate to the Board. A candidate thus recommended under the foregoing provisions will be examined by the Board in the broad field of internal medicine.

If, during the period of training under Plan H, the candidate decides to qualify under one of the other plans of the Board (A to G) credit will be granted on the basis of the requirements of Plans A to G.

Half-time formal training under expanded plans B, D and E is defined as follows:

1. Half-time* as an instructor in clinical medicine in a recognized medical school in the United States or Canada.

2. Half-time* in a research fellowship sponsored by a recognized medical school in the United States or Canada.

3. Half-time* as a graduate student in an approved medical school in the United States or Canada.

5. Practice Requirements: A period of not less than two years (to be completed by the time of the first written examination) of adequate clinical experience in the practice of internal medicine. This requirement may be satisfied by inde-

pendent practice or in association with a recognized internist following completion of formal training. If teaching or research assignments are broad enough to merit practice credit, please ask Chief of Service or Chairman of the Department of Medicine to certify that assignments are equivalent to the practice of medicine as it is commonly known. Adequate experience in the care of clinical patients would include full responsibility for in-patients as well as out-patients. The certification referred to should accompany application.

6. Graduates of Foreign Medical Schools: All candidates who are graduates of foreign medical schools must meet the following requirements as a minimum:

(a) The physician must be a citizen of the United States.

(b) The physician must furnish proof in the form, and to the extent deemed adequate by the Board that he (or she) has graduated from a medical school after completing a four year full time course in medicine.

(c) The physician must have a license to practice in one or more states of the United States, and have been in active practice confined to Internal Medicine within the state of legal residence for at least two years.

(d) Graduates of foreign medical schools, prior to 1930 may qualify under the alternate plans of the Board the same as graduates of approved medical schools in the United States.

(e) Graduates of foreign schools in 1930 and thereafter must, in addition to all other requirements, satisfy the requirements of one year of approved internship, and three years of approved residency or fellowship in the United States, followed by at least two years of practice limited to the field of Internal Medicine in the United States. If, however, their school of graduation is "recognized" by the Council on Medical Education and Hospitals of the American Medical Association, graduates of Foreign Schools may qualify under the various plans of the Board the same as graduates of approved Medical Schools in the United States.

7. Candidates Graduating Prior to 1937: Candidates graduating from approved medical schools in the United States or Canada prior to 1937 may qualify for admission to examination provided their practice has been limited to internal medicine for at least two years prior to application and provided they are identified as internists by their colleagues in their community.

8. Preceptor Training: Preceptor type training is not recognized in satisfaction of any part of the three year requirement of formal graduate training.

9. Credit For Service In The Medical Corps of the Armed Forces Of The United States and Canada.

(a) Active duty as a commissioned officer in the Medical Corps prior to January 1, 1947, may be applied as one year of residency credit or one year of practice credit, regardless of assignment. Service beyond one year may only be applied as practice credit on Certification of former Chiefs of Service that assignments were in the field of Internal Medicine on a full time basis in the care of clinical patients largely on one's own responsibility.

(b) Active duty as a commissioned officer in the Medical Corps from January 1, 1947, to June 1, 1950, may be applied as practice only. Certification of former Chiefs of Service (as referred to in Paragraph A) should accompany application.

(c) Active duty as a commissioned officer in the Medical Corps for period June 1, 1950, to July 1, 1954, may be applied as one year of residency credit or one year of practice credit regardless of assignment. Service beyond one year may be applied as practice credit only on the Certification of former Chiefs of Service as referred to in Paragraph A.

(d) Active duty as a commissioned officer in the Medical Corps after July 1, 1954, may be applied as practice credit only. Certification of Chiefs of Service as referred to in Paragraph (a) should accompany application.

(e) Residency credit automatically granted for active service in the Medical Corps of the Armed Forces was discontinued as of July 1, 1954.

*Half-time formal training is regarded as four hours per day for six days per week. It is required that half-time formal training be verified by the head of the department. Verification must accompany application.

10. Graduates of The Chicago Medical School, prior to approval by the Council on Medical Education and Hospitals of the American Medical Association, and graduates of the Middlesex School of Medicine, who received their degree in medicine prior to January 1, 1951, and who have fulfilled all of the requirements set forth in Section 2 (Requirements for admission to Examination and Certification), and an approved residency or fellowship of three years duration (Plan A) and followed by two years of practice in Internal Medicine may apply, and at the discretion of the Executive Committee or of the Board may be admitted to examination.

PRINCIPLES OF TRAINING

The American Board of Internal Medicine is interested in the fact that the candidate has embarked on a career of study voluntarily and has thereby expressed the desire to excel and to participate personally in the world's progress in Medicine.

Preparation must be based on years of continuous thoughtful study. Therefore, in suggesting a program for those who wish advice, the Board hopes to assist the candidates to avoid inferior and superficial programs which may lead to failure and disappointment in later years.

The Board believes that all internists should have a sound fundamental knowledge of Anatomy, Bacteriology, Biochemistry, Pathology, Pharmacology, and Physiology. Such knowledge is essential to the continued progress of any internist. The Board anticipates that adequate training will be obtained in the basic sciences as applied to internal medicine during a formal three year residency program.

The Board wishes to emphasize that time and training are but a means to the end of acquiring a broad knowledge of internal medicine which the candidate must demonstrate to the Board in order to justify it in certifying that he is competent to practice internal medicine as a specialty. The responsibility of acquiring the knowledge rests with the candidate. The responsibility of maintaining the standards of knowledge required for certification rests with the Board.

APPLICATION

Candidates for examination must make their application on a prescribed form which may be obtained from the office of the Executive Secretary-Treasurer.

The application must contain a record of the candidate's premedical and medical training as well as of internships, residencies, graduate study, hospital or dispensary staff appointments, teaching positions, service in the armed forces, membership in medical societies, medical papers published, and the names of four well known internists to whom the Board may write for professional and character reference.

The application must be accompanied by one recent, signed photograph of the candidate mounted on the application, and the registration and examination fee of Forty (\$40.00) Dollars to cover the written examination, of which Twenty-five (\$25.00) Dollars will be refunded if the application is disapproved. Upon application for admission to the oral examination, an additional fee of Fifty (\$50.00) Dollars will be required. Upon notification of certification by the Board, a further fee of Ten (\$10.00) Dollars to cover cost of certification, will be required.

Applications must be filed by May 1st of the year concerned and all requirements must be satisfied by October 1st of the year concerned.

The requirements of graduate training followed by two years of practice in the field of internal medicine must be satisfied before a candidate is eligible for admission to examination.

If three or more years elapse before a candidate completes his certification, the Board will require the candidate to file a new application.

METHOD OF EXAMINATION—WRITTEN AND ORAL

1. The examinations for certification by the Board comprise two parts: Part I is written; Part II is clinical and is an oral examination. The written examination is held simultaneously in different sections of the United States, Canada, and outside continental limits of the United States wherever eligible candidates are located. Only one written examination will be given each year. This examination will be held on the third Monday

in October. This examination is divided into a morning and afternoon period for each of which three hours are allowed. The questions are of the multiple choice type, framed in such manner as the Board elects, and designed to test the candidate's basic clinical acumen and his knowledge of applied physiology, anatomy, physiological chemistry, pathology, bacteriology, and pharmacology as related to internal medicine.

2. Candidates must pass the written examination before admission to the oral examination will be authorized. Oral examinations are held near the time and place of the annual meetings of the American Medical Association and the American College of Physicians and at such other times and places as the Board may designate. Announcements of all oral examinations will appear in the *Annals of Internal Medicine* and *THE JOURNAL* of the American Medical Association. Applications cannot be accepted until the schedule is announced in the publications referred to and cannot be accepted after the closing date as announced.

3. The oral examination will be conducted under the direct supervision of the Board. It will be given by members of the Board of Internal Medicine with the assistance of such Guest Examiners as may be selected. Oral examinations are conducted at the bedside of each of two patients previously assigned to each candidate. Forty-five minutes will be allowed for the examination of each of the patients before the candidate is examined orally. Candidates will be expected to present in a concise, orderly fashion pertinent facts in history and diagnosis. Demonstration of important physical findings will be requested by the examiner. During the oral examination, questions will be asked concerning diagnostic and therapeutic procedures related to the problems under discussion and to any other aspects of Internal Medicine. Conciseness and clarity of statements as well as evidence of clinical maturity will be searched for, in addition to factual knowledge. Furthermore, the candidate should be prepared to demonstrate his ability to interpret objective demonstrations of roentgenologic, pathologic, hematologic, electrocardiographic and other abnormalities.

AMERICAN BOARD OF NEUROLOGICAL SURGERY

A. EARL WALKER, Chairman, Baltimore
 EDGAR F. FINCHER, Vice-Chairman, Atlanta, Ga.
 GEORGE S. BAKER, Rochester, Minn.
 E. JEFFERSON BROWDER, Brooklyn, N. Y.
 WILLIAM V. CONE, Montreal, Canada
 DEAN H. ECHOLS, New Orleans
 FRANC INCRAHAM, Boston
 EDGAR A. KAHN, Ann Arbor, Mich.
 FRANK MAYFIELD, Cincinnati
 WILLIAM T. PEYTON, Minneapolis
 JOHN RAAF, Portland, Ore.
 LEONARD T. FURLOW, Secretary-Treasurer, 600 S. Kingshighway, St. Louis 10, Mo.

GENERAL QUALIFICATIONS

1. Moral and ethical standing in the profession satisfactory to the board of directors.
2. It shall be discretionary with the board to accept for examination candidates who have been in practice more than six years but whose formal training fails to meet the full requirements.
3. Properly qualified candidates who are permanent residents in and citizens of other countries and are legally qualified to practice medicine there, and who have received their training in neurological surgery in the United States of America or Canada may apply for certification by the American Board of Neurological Surgery.
4. A special certificate may be issued to foreign (not United States of America or Canadian citizens) candidates who have received their training in neurological surgery in the United States of America or Canada and who are returning to their own country at the end of their training period, upon passing successfully the regular examinations of this board, without completion of the requirement of two years in the practice of neurological surgery. This special certificate shall be appropriately identified to distinguish it from the regular certificate of this board.

PRELIMINARY PROFESSIONAL STANDING

1. Graduation from a medical school that is acceptable to the American Board of Neurological Surgery.
2. Completion of a surgical internship of not less than one year in a hospital acceptable to the board, or its equivalent in the opinion of the board. (A one year rotating internship does not satisfy this requirement.)

SPECIAL TRAINING

A period of graduate study of not less than four years beyond the year of general surgical training in an approved hospital, or in a recognized graduate school of medicine acceptable to the American Board of Neurological Surgery. Of this training period, at least 30 months must be devoted to clinical neurological surgery. The training in clinical neurological surgery must be progressive and not obtained during repeated short periods in a number of institutions. It is preferable that at least two years of this training be had in one institution, and the board will not ordinarily approve periods of training in clinical neurological surgery of less than one year.

Furthermore the candidate must prepare himself to pass a board examination in general surgery, organic neurology, neuropathology, neuro-anatomy, neuro-physiology, neuro-ophthalmology, and neuro-radiology.

An additional period of not less than two years of satisfactory independent practice of neurological surgery.

The above represent only the minimum requirements of eligibility for examination for certification by the board.

APPLICATIONS

An application on the official application blank in order to be considered at any meeting, must be in the hands of the secretary-treasurer of the board not less than six months before the date of such meeting.

PAYMENT OF FEES

The fee for certification shall be \$100.

The candidate for examination on filing his application shall accompany it with an application fee of \$25. When notified by the secretary-treasurer that he is eligible for examination he shall send the examination fee of \$75 to the secretary-treasurer at least two weeks before the date of the examination.

AMERICAN BOARD OF OBSTETRICS AND GYNECOLOGY

F. BAYARD CARTER, President, Durham, N. C.
 ROBERT A. KIMBROUGH JR., Vice-President, Philadelphia
 HERBERT E. SCHMITZ, Vice-President, Chicago
 WALTER T. DANNREUTHER, New York
 DANIEL G. MORTON, Los Angeles
 JOHN L. PARKS, Washington, D. C.
 CONRAD G. COLLINS, New Orleans
 R. GORDON DOUGLAS, New York
 CARL P. HUBER, Indianapolis
 CURTIS J. LUND, Rochester, N. Y.
 ROBERT L. FAULKNER, Secretary-Treasurer,
 2105 Adelbert Rd., Cleveland 6, Ohio
 LAWRENCE M. RANDALL, Assistant Secretary,
 Rochester, Minn.

REQUIREMENTS

Each applicant, before he may become eligible to apply for examination, must establish the following facts:

1. The possession of the degree of Doctor of Medicine from an institution of learning approved by the Council on Medical Education and Hospitals of the American Medical Association.
2. That he is a physician of high ethical and professional standing duly licensed to practice medicine in the United States or Canada and is a member of a County or District Medical Society.
3. The completion of at least one year of intern service in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association. The Board

accepts the fifth or "intern" medical year required by some schools in lieu of the usual fifth or intern year of clinical training following graduation.

4. The completion of seven years of training and practice after the first intern year to include at least three years of residency training in clinical obstetrics-gynecology in approved institutions. Approved preceptorship training may be substituted in part for residency training.

5. Following completion of acceptable training, two years of post-training practice, limited to the specialty, are required before application for examination can be made. Post-training practice may include practice within the specialty as an assistant or associate or independent practice. Periods of residency in obstetrics-gynecology in excess of the required three years will not be accepted as a substitute for any part of the two required years of post-training practice except in the cases of men advancing from the residency training into and planning to remain in full time faculty positions in medical schools and their affiliated hospitals.

6. That he is limiting his practice to obstetrics and/or gynecology and intends to continue to do so, except for possible military duty.

7. The Board conformed with the general acceleration in programs in medical education in that it will accept a period of nine "accelerated" months as an academic year in satisfying our requirements for each of three years of residency training. Such allowances can be made only for services during the war-time period of the official "accelerated program" and are not made for services before 1943 or after the discontinuance of this acceleration in 1946.

8. Applicants who have been certified by one of the other American specialty examining boards will not be eligible for certification by this Board until they have relinquished the certificate previously conferred, except upon special action to the contrary taken by the American Board of Obstetrics and Gynecology.

9. The Board has ruled that physicians who accept male patients in their private or other practice, for operative or other care, cannot be regarded as specialists in obstetrics and gynecology, except by special ruling when this is related to active military duty.

10. This Board deprecates engagement in fields of practice other than that in which candidates profess to be specialists. The sole exception to this provision is that it is permissible for candidates and diplomates of the American Board of Obstetrics and Gynecology to participate in emergency care.

11. This Board will not accept applicants for examination who are not full citizens of the United States or of Canada. Foreign born applicants must have been certified by either the National Board of Medical Examiners or licensed to practice medicine in the United States or Canada by a State or Provincial Board of Licensure. Notarized statements, not original citizenship papers, must be furnished when the application is filed attesting to the fact of full citizenship in the United States or Canada, if the applicant is foreign born. Further, there will be required a probationary period of at least three (3) years from the date of licensure in the practice of medicine in these countries before such a candidate may be admitted to examination.

SPECIAL CREDITS AND RULINGS

1. Physicians otherwise qualified, who are graduated before January 1, 1939, and whose required training was in obstetrics or gynecology alone, and who have confined their practice to obstetrics or gynecology for at least five (5) years immediately prior to application may be accepted for examination as candidates for certification in either obstetrics or gynecology. In all other respects requirements for eligibility remain the same as for those physicians graduated since 1939. At least a fundamental knowledge of both obstetrics and gynecology is essential regardless of whether a candidate's practice is limited to one or the other branch.

2. Basic science training should emphasize the relation of anatomy, pathology, physiology, biochemistry, and bacteriology, to the application of surgical principles which are fundamental in all branches of surgery. More especially for this specialty there should be training in infertility, endocrinology, oncology, irradiation therapy, electrotherapy, psychosomatic medicine

and other nonoperative methods of diagnosis and treatment. In addition, the candidate must understand and be trained in the care of emergencies, shock, hemorrhage, blood replacement, electrolyte and fluid balance, protein and nitrogen balance, choice of anesthetics, chemotherapy, acidosis and alkalosis, narcotics and hypnotics, wound healing, etc.

3. After July 1, 1958, this Board will not allow credit within the three years required training period for separately organized basic science courses which remove the candidate from clinical training in obstetrics and/or gynecology.

4. Training in abdominal surgery, in addition to the required three (3) years of training in clinical obstetrics and gynecology, is desirable and may be included in the total minimal seven (7) years required after the intern year.

5. Applicants on service in obstetrics-gynecology under orders in hospitals of the Army, Navy, Air Force and Public Health Service will receive residency training credit if such hospitals are officially approved for training in this specialty.

When the hospital is not approved, preceptorship training credit may be allowed if the service is supervised by a Diplomate of this Board or an otherwise qualified obstetrician and gynecologist. If such training credit is desired, candidates must comply with the regulation governing preceptorships. In addition, the Medical Officers Professional Training Record should be completed and attested while in military service.

Credit toward the required two years of post-training practice, limited to this specialty, will not be allowed for service in the Armed Forces except in the case of regular medical officers who have completed the training requirements.

APPLICATION AND FEES

Application must be made on a special blank which will be furnished by the Secretary's Office and must be forwarded with the other required credentials and the application fee to the Secretary's Office not later than September 1, of each year.

All candidates must comply with Board regulations in effect for the year in which the examination is taken, regardless of when the original application was filed.

Candidates applying for admission to the examinations for certification are required to submit with their application, an unbound typewritten list on 8½ by 11 paper of all patients admitted to the hospitals where they practice, for the year preceding their application or the year prior to their request for reopening of their application, with the age, parity, diagnosis, pathological diagnosis, nature of treatment, and end result.

The list should be certified by the hospital librarian, administrator or superintendent.

The application fee is \$25.00 and is not returnable.

The examination fee is \$100.00 and is payable when the candidate is notified of acceptance for examination. This fee is not returnable after the candidate has been officially accepted by the Credentials Committee and notified to report for examination.

EXAMINATIONS

Part I examinations are scheduled annually for early in January. Arrangements will be made for candidates to report in any convenient city where there may be a Diplomate of this Board to conduct or to supervise the written examination which will be sent out from the Board's office under sealed cover.

Special arrangement will be made through senior officers for conducting the written portion of the Part I examination for men in military service. Such candidates are requested to keep the Secretary's office informed at all times of changes in their mailing addresses.

All applicants accepted for examination will be required to obtain a passing grade in both the written examination and a review of case reports (Part I), before becoming eligible for the oral-clinical and pathology examinations (Part II). The passing grade for the written examination and case reports is 75 per cent. A candidate whose grade in either or both falls below 75 per cent is conditioned. Reexamination for the removal of conditions in Part I may be taken after one year but within three years after the first failure, without payment of an additional fee.

Candidates who successfully complete the Part I examination proceed automatically to the Part II examination held later in the year.

Part I

Examination consists of:

1. A comprehensive written examination, conducted annually, including questions on both obstetrics and gynecology and related basic sciences. The written examination will be limited to a maximum period of three hours.

2. The evaluation of twenty (20) important obstetrical and gynecological case reports in condensed form. Five (5) of the twenty (20) cases may concern major illnesses not necessarily operative. These reports must include a variety of material rather than a number of reports of one type. Case reports from one's residency service shall not be more than five (5) in number.

CASE REPORTS

In the case of candidates applying for unilateral certification, case reports must pertain to the branch for which application is made.

Men holding full-time medical school faculty appointments may submit the remainder of their case records from this full-time, non-private practice, but post-training service. The candidate should prepare and maintain in his possession a carbon copy of his case records in case of possible loss in shipping.

Evidence of adequate follow-up examination pertinent to each individual case must be submitted.

The candidate should submit separate verified index lists, in duplicate, for each individual hospital at which operations were performed. All of these must be formally signed by the responsible hospital official (preferably the hospital superintendent), attesting in each instance that the candidate was the operator.

Part II

The oral-clinical and pathology examinations given all candidates are conducted by the entire Board and the associate examiners. Advance announcements of examination dates and place will be made in medical journals throughout the country.

Examination consists of:

1. Oral examination before three or more examiners. An endeavor is made to adapt the details of the oral examination to each candidate's experience and practice. The examination is particularly directed to ascertain his familiarity with recent obstetrical and gynecological literature, the related basic sciences, the breadth of his clinical experience, and his general qualifications as a specialist in obstetrics and gynecology.

2. Pathology examination. The candidate is expected to identify and to discuss pathologic specimens and microscopic sections.

Examiners report orally upon each candidate to the assembled Board, after which the results of their investigations are considered jointly by the entire Board and associate examiners. After a general consideration of the details of the candidate's oral and pathology examinations, including a review of his capability and general adaptability, the candidate is passed or failed by the entire Board of Directors.

The final action of the Board is based upon the candidate's ethical and professional record, training and attainments, as well as on the results of his formal examination.

GRADUATE TRAINING RESIDENCIES

This Board, through the Council on Medical Education and Hospitals of the American Medical Association, has approved institutions providing acceptable residencies in obstetrics and gynecology.

The American Board of Obstetrics and Gynecology has established the following requirements for its approval of a residency in a hospital department or service:

1. It is most desirable that the Chief of Service of the Department be certified by the Board, in the interests of the proper teaching of the specialty of obstetrics and gynecology. In lieu of such certification the Board will approve of individuals of recognized high professional standing in the specialty. At least one additional senior member of the staff should be similarly qualified.

2. Exceptions to the foregoing, in respect to the certified status of Chiefs of Service and others as outlined above, can be made by assent of the Committee on Residency Training,

for adequate and justifiable reasons. As examples of the latter, the degree of F.A.C.S. in obstetrics-gynecology may be accepted in lieu of one of the two required certifications if the general reputation of the person concerned is known to the Committee as national or sectional in scope, or a professorial rank without certification might be acceptable.

3. In instances where the services of obstetrics-gynecology are not combined but are separate in any given hospital, the Chief of each such service seeking approval and at least one of his subordinates must be certified or otherwise qualified as outlined above. If obstetrics and gynecology are not combined in one department, approval can be granted only if arrangements are made for some degree of rotation of residents between both services, provided both services are separately approved.

4. If gynecology is classified in the given hospital as a subdivision or subservice of general surgery, approval cannot be granted for residency training in gynecology. Exceptions have been made if the subdivision of Gynecology is headed and staffed by a Chief and at least one other certified by this Board or otherwise qualified as specialists in obstetrics-gynecology, as specified above, thus ensuring an acceptable educational program in obstetrics-gynecology.

5. Departments holding official approvals for residency training are cautioned that their totals of residents appointed must be kept to the number specified in the American Medical Association-American Board approval notification. Dilution of training facilities by unauthorized appointment of residents in excess of these numbers may be cause for reinspection and changes in approval status of such hospitals and their special services.

6. For further details of requirements and qualifications for approval for residency training, hospital officials should refer to the latest special issues of THE JOURNAL of the American Medical Association as they appear during each year, dealing with these subjects, or should apply to the Council on Medical Education and Hospitals of the American Medical Association for bulletins entitled Essentials of Approved Residencies and Fellowships.

7. Application for residency approval must be made in triplicate on special forms provided for this purpose. These forms may be obtained from the Secretary of the Council on Medical Education and Hospitals of the American Medical Association. All statements amplifying an application should also be made in triplicate. The hospital should keep a duplicate of all papers.

8. The formal application, with all papers, for residency training approval should be submitted primarily to the Council on Medical Education and Hospitals of the American Medical Association, 535 North Dearborn Street, Chicago 10, Illinois. Action is taken jointly by the Council and this Board after survey by the Council.

9. Approvals are granted according to adequacy of the training program and teaching facilities of various institutions on the following several bases: (a) one-year approval in obstetrics and gynecology (combined) or one-year approval in obstetrics and/or in gynecology (separate), correlated basic science instruction being an essential part of the first year; (b) two-year approval in obstetrics and gynecology (combined) or two-year approval in obstetrics and/or in gynecology (separate), provided there is opportunity in the latter instances for some degree of rotation between the two services as well as laboratory instruction in basic sciences; (c) three-year approval in obstetrics and gynecology (combined) or in obstetrics or in gynecology, provided there is opportunity for one to one and one-half years' service in the branch of the specialty opposite to that in which the candidate holds appointment, as well as laboratory instruction in the basic sciences of both branches.

Exchange residencies within the specialty between approved institutions are acceptable and to be encouraged. Many authorities believe that training in more than one institution is broadening to the candidate. "Farming out" to unapproved institutions or services is not acceptable unless the work of such services is directly and carefully supervised by the Chiefs of the service in the approved hospital under which the man is actively appointed and working. This should be attested by such Chiefs.

Exchange residencies into other specialties cannot be permitted to subtract from the minimal required three (3) years of training divided between obstetrics-gynecology.

Two (2) years of post-training practice limited to the specialty is necessary before a candidate may apply for examination.

This Board has no objection to residency services being arranged by hospitals for periods longer than three (3) years, unless this dilutes the candidate's clinical training opportunities too much during the first three (3) years. However, the Board does not accept a fourth year, or more, of residency training as a substitute for any part of the required two (2) years of post-training practice.

The importance of post-training practice in the specialty is emphasized as an opportunity for maturing of the candidate and for colleague appraisal of a man's ability when working on his own responsibility in his chosen community.

Exception to this ruling may be made for men advancing from their training into and planning to remain in full-time teaching positions. These men then must complete at least two (2) years in such positions. Consequently the only institutions in which men may work as fourth and fifth-year residents and obtain credit for this time as "post-training practice" are those directly affiliated with approved schools of medicine as teaching hospitals for undergraduate instruction. These "full-time" men must hold faculty appointments, must have teaching duties with undergraduate students, must be given independent authority more than that of residents, and must make a declaration of intention to remain in full-time teaching work.

10. Any physician formally obligating himself to serve a residency in a Council on Medical Education and Hospitals of the American Medical Association-American Board of Obstetrics and Gynecology approved hospital and thereby eliminating other possible candidates from the position, who breaks his contract without justifiable cause, either before beginning his service or during his period of service, except by mutual consent and agreement between the candidate and the hospital, may be barred from the examinations for certification at the discretion of the Board.

11. It should be recalled by all concerned that credits for graduate training may be obtainable in certain instances for residency or assistantship service in hospitals not officially approved for residency training. Each such case must be individually considered, and credits will be largely dependent upon the teaching qualifications of those in charge of the service, and the clinical facilities of the hospital in question.

PRECEPTORSHIP TRAINING

After July 1, 1958, the initiation of Preceptorship Training must be preceded by two (2) years of formal training in an institution approved for residencies in obstetrics and/or gynecology. Candidates who propose Preceptorship Training must notify the Secretary of the Board of such intent and request an application form. When this has been completed, signed by the Preceptor and Preceptee and returned to the Secretary, it will be submitted (as has long been true of Residency Training Programs) to the Residency Training Committee of the Board for their decision.

If the program is approved the Preceptor must supervise closely the candidate's work and keep an informative record of the candidate's performance. The Preceptor and the Preceptee shall report in writing to the Secretary of the Board at the end of each six months of Preceptorship, outlining the progress of the training program. This information will be placed in the candidate's application for admission to examination in order that it may be evaluated by the Credentials Committee.

As a general rule each year of Preceptor Training will receive a six month's credit toward the total of three years of training necessary for admission to examination. As is the case with candidates whose training has been entirely by formal residency, each application will be evaluated finally by the Credentials Committee.

An acceptable Preceptor preferably shall be one certified by the American Board of Obstetrics and Gynecology and must have been certified for a minimum of five years. Fellowship in the American College of Surgeons or long experience

and established reputation as an obstetrician-gynecologist without either of the above qualifications may qualify the Preceptor.

Preceptor and Preceptee must work in a hospital approved by the Joint Commission on Accreditation of Hospitals.

The post-training practice requirement cannot be carried on concurrently with Preceptorship Training.

AMERICAN BOARD OF OPHTHALMOLOGY

F. BRUCE FRALICK, Chairman, Ann Arbor, Mich.
 GORDON M. BRUCE, Vice-Chairman, New York
 MERRILL J. KING, Secretary-Treasurer, Rockland, Maine
 FRANCIS H. ADLER, Philadelphia
 JAMES H. ALLEN, New Orleans
 ALSON E. BRALEY, Iowa City
 PAUL A. CHANDLER, Boston
 MICHAEL J. HOGAN, San Francisco
 HAROLD H. JOY, Syracuse, N. Y.
 JOHN S. MCGAVIC, Bryn Mawr, Pa.
 C. WILBUR RUCKER, Rochester, Minn.
 KENNETH C. SWAN, Portland, Ore.
 MISS LEA M. STELZER, Registrar, 56 Ivie Rd.,
 Cape Cottage, Maine

PREREQUISITES

1. High ethical and professional standing.
2. Full citizenship in the country where the candidate practices. (Limited to countries of North and South America, their possessions and territories, and the Philippine Republic.)
3. A degree from a medical school of high standing, satisfactory to the board and approved by the Council on Medical Education and Hospitals of the American Medical Association. An applicant whose training has been received outside of the United States and Canada must present credentials satisfactory to the board and is required to have the certificate of the National Board of Medical Examiners if he has been in practice less than 10 years.
4. Completion of an internship of not less than one year in a hospital approved by the same Council.
5. Completion, by the time of the written qualifying test, of not less than 36 months (a total of 60 months is required of candidates practicing both ophthalmology and otolaryngology) of combined study, training, and practice of ophthalmology in approved medical schools, hospitals, clinics, dispensaries, laboratories, preceptorships, and private practice.
6. Effective January 1, 1957:
 - (a) Licensure in the state, province, or country where the candidate practices.
 - (b) Individuals who have completed three years of formal ophthalmological training (residency and basic science courses) will be eligible to apply for the written qualifying test after completion of one year of practice or of one year of institutional work. All other individuals (with less formal training) will be eligible to apply for the written test after 60 months in ophthalmology or 72 months of combined ophthalmology and otolaryngology. A basic course is recognized as equivalent in time to residency training.

GENERAL REQUIREMENTS FOR ALL CANDIDATES

1. Application forms must be filled out completely and accurately. Letters of endorsement, together with any other required credentials, must be sent to the secretary's office before the deadline date.
2. Fee of \$100 remitted with application.
3. A list of papers or books published.
4. Written qualifying test.
5. Practical examination.
6. Special review of ophthalmic surgery.
7. Licensure in the State, Province or country where the candidate practices.

FEES

For original written test, \$100.00, payable with application.
 For original clinical examination, \$50.00, payable on successful completion of the written.

AMERICAN BOARD OF ORTHOPAEDIC SURGERY

GEORGE J. GARCEAU, President, Indianapolis
 CHARLES J. FRANKEL, Vice-President, Charlottesville, Va.
 MATHER CLEVELAND, New York
 EDWIN F. CAVE, Boston
 WILLIAM H. BICKEL, Rochester, Minn.
 S. BENJAMIN FOWLER, Nashville, Tenn.
 GEORGE W. N. EGGERS, Galveston, Texas
 J. VERNON LUCK, Los Angeles
 SAM W. BANKS, Secretary-Treasurer, 116 S. Michigan Ave.,
 Chicago 3, Ill.

GENERAL ELIGIBILITY REQUIREMENTS

1. Satisfactory moral and ethical standing in the profession.
 2. Graduation with a degree of doctor of medicine from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association, or graduation from a foreign school on the approved list of the aforementioned Council.
 3. Completion of an internship of not less than one year in a hospital approved at that time by the Council on Medical Education and Hospitals of the American Medical Association or, if trained in foreign countries, in institutions considered satisfactory by the American Board of Orthopaedic Surgery.
 4. Completion of one year of resident training in general surgery in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association or substitute training in general surgery considered satisfactory by the American Board of Orthopaedic Surgery. The minimum of one year of training in general surgery is in addition to the minimum of one year of internship. This requirement may be fulfilled by substituting a second year of internship, by time spent in research, by time spent on a service in which there is an overlap of interest with orthopaedic surgery, by a fourth year of approved orthopaedic resident training, or by surgical work in private or military life.
 5. Completion of formal requirements for part 1 or part 2 examinations. These formal requirements can be satisfied only by resident orthopaedic training.
- Applicants may not be admitted to examinations, or be certified, on the basis of extensive specialized practice and/or teaching appointments and/or many short unapproved courses.
6. Restriction of practice to orthopaedic surgery.

REQUIREMENTS FOR PART 1 EXAMINATIONS

1. Completion of and compliance with aforementioned general eligibility requirements.
2. Citizenship in the United States or Canada, or possession of citizenship papers showing intent to become a full citizen.
3. Following completion of a year of internship, satisfactory completion of a minimum of one year of general surgical training, or its substitute, plus (a) two years of approved training in orthopaedic surgery under a program of resident training.
4. Evidence of competence in training.
5. Approval for examination by the committee on eligibility of the American Board of Orthopaedic Surgery.

REQUIREMENTS FOR PART 2 EXAMINATIONS

1. Successful completion of part 1 examinations.
2. Full citizenship in the United States or Canada.
3. License to practice in the United States or Canada.
4. Satisfactory completion of a minimum of three years of approved resident training in orthopaedic surgery, plus a minimum of two subsequent years of practice period.
5. Evidence of competence in practice.
6. Approval for examination by the committee on eligibility of the American Board of Orthopaedic Surgery.

APPLICATION AND EXAMINATION FEE SCHEDULE

1. Application for part 1, fee \$15, not returnable.
2. Examination, part 1, fee \$35, payable only if approved for examination. Approved candidates failing to appear for scheduled examinations forfeit fees.
3. Application for part 2, fee \$15, not returnable.
4. Examination, part 2, fee \$50, payable only if approved for examination. Approved candidates failing to appear for scheduled examinations forfeit fees.

APPLICATIONS

1. Applications for part 1 examinations must be received in the office of the secretary of the board before November 30 of the year preceding the examinations.
2. Applications for part 2 examinations must be received in the office of the secretary of the board before August 15 of the year preceding the examinations.
3. Notices of acceptance for admission to the part 1 examinations are mailed to eligible candidates during the month of February in the year of the examinations.
4. Notices of acceptance for admission to part 2 examinations are mailed to eligible candidates during the month of November in the year preceding the examinations.
5. Questions of eligibility for examinations are decided by the committee on eligibility of the board. This committee meets twice yearly. The secretary is not empowered to rule on questions of eligibility.
6. The life of an application is three years. After this time a new application and application fee must be submitted.

EXAMINATIONS

1. Part 1 examinations are held once yearly, usually in April or May, in various centers in the United States.
2. Part 2 examinations are held once yearly, usually in one center, immediately preceding the meeting of the American Academy of Orthopaedic Surgeons.
3. The locations and dates of coming examinations are announced in *THE JOURNAL* of the American Medical Association and the *Journal of Bone and Joint Surgery*.

CERTIFICATION

1. Applicants who successfully pass part 1 examinations will receive no certificate but will be notified by letter by the secretary.
2. Applicants who successfully pass part 2 examinations receive a certificate of the board, which states that they have been found qualified to practice the specialty of orthopaedic surgery in those fields in which they have been trained and examined.
3. Candidates obtaining certification without training and examination in children's orthopaedic surgery may subsequently add certification in children's orthopaedic surgery by completing a minimum of one year of approved resident orthopaedic training in children's orthopaedic surgery and successfully passing examination in that field. A practice period of one year is required following completion of resident training, prior to examination for additional certification.

APPROVED RESIDENCIES

1. In the United States, resident training must be taken in institutions approved for resident training in orthopaedic surgery by the Council on Medical Education and Hospitals of the American Medical Association. All approved institutions are listed yearly in the Internship and Residency Number of *THE JOURNAL*. Lists may be obtained from the American Medical Association and are not obtainable from the board.
2. The integral parts of approved residencies are designated in lists by the following symbols: A—adult orthopaedic surgery; C—children's orthopaedic surgery; F—fracture surgery; and S—basic science training. Approved length of training in institutions is also designated.
3. Candidates electing an additional year of training in adult orthopaedic surgery and fracture surgery in lieu of a year in children's orthopaedic surgery may satisfy requirements by continuing their training beyond the designated approved length of time in institutions approved for adult orthopaedic surgery or adult orthopaedic surgery and fractures.
4. Credit for resident training is not retroactive. Candidates must receive resident training in institutions during periods that such institutions are on the approved list. If candidates are in training at institutions at the time that such institutions become approved, resident training credit may be granted from the start of the training period provided that the program is judged to have been satisfactory.

5. Candidates in resident training, or possessing signed contracts for future resident training in institutions which become disapproved, either in whole or part, receive resident training credit for the entire period during which their contracts are in force.

6. The term "fellow" is considered synonymous with "resident" when the position occupied and the work performed is equal in all functions. Fellowships in institutions having residents, in which training and responsibilities are not equal, are not credited as resident training.

7. Institutions approved for resident training in orthopaedic surgery by the Council on Medical Education and Hospitals of the American Medical Association may, with prior acceptance by the American Board of Orthopaedic Surgery and notification to the Council, utilize the training facilities of institutions not individually approved for resident training by the aforementioned Council, provided that: (a) the training supplements services in the same categories in which the institution responsible for training is approved by the Council, (b) the resident spends at least half of the minimum required time in each category of training in institutions approved by the Council.

8. Foreign residencies must satisfy the American Board of Orthopaedic Surgery.

9. Application for approval of the training facilities of any institution must be made to the Council on Medical Education and Hospitals of the American Medical Association, and inspection of such facilities is made by representatives of the Council. Final approval is a joint function of the Council and the American Board of Orthopaedic Surgery.

REQUIREMENTS OF RESIDENT ORTHOPAEDIC TRAINING

1. Institutions approved for full three year programs including all parts of the training requirements may integrate all parts so that they are given concurrently.

2. Institutions now approved for less than three years of orthopaedic resident training should arrange with other approved institutions to provide complete three year programs for all residents.

3. The minimum requirements of resident orthopaedic training are as follows: (a) one year of training in adult orthopaedic surgery, (b) six months of training in the basic sciences, (c) six months of training in fracture surgery, and (d) one year of training in children's orthopaedic surgery or, if elected, an additional year of training in adult orthopaedic surgery and fracture training in place of training in children's orthopaedic surgery.

4. Candidates who elect an additional year of training in adult orthopaedic and fracture surgery instead of a year in children's orthopaedic surgery may satisfy the requirements by taking the additional year of training in adult orthopaedic surgery or six months of adult orthopaedic surgery and six months of fracture surgery, but may not take the entire year of training in fracture surgery.

5. Training in adult and children's orthopaedic surgery must include observation and firsthand experience in diagnosis treatment, operative and postoperative care of orthopaedic problems.

6. Training in fracture surgery must include observation and firsthand experience in diagnosis, treatment, operative and postoperative care of recent and old fractures.

7. Training in the basic sciences must instill a sound knowledge of anatomy, pathology, physiology, bacteriology, and biochemistry as these basic sciences apply to orthopaedic surgery.

8. Candidates may complete the training requirements by training in several approved institutions provided that all the aforementioned minimum requirements are satisfied on approved services.

9. No training period of less than six consecutive months in one institution may be credited toward resident training requirements, except a few short courses on the board's approved list and recognized supplementary services of approved institutions.

10. Candidates in resident training may not engage in private practice.

11. Candidates in resident orthopaedic training must receive their training in institutions and may not receive credit for time spent assisting in private office practice.

SEQUENCE OF EXAMINATIONS AND PRACTICE REQUIREMENTS

1. No person may take part 2 examinations until after successful completion of part 1 examinations.

2. Successful completion of part 1 examinations in no way obligates the board to declare a candidate eligible for part 2 examinations.

3. Regardless of how extensive or prolonged a practice a candidate may have had prior to completing the training requirements, such time may not be credited toward practice requirements. All practice requirements must be satisfied subsequent to completion of training requirements.

4. Candidates may not be admitted to examinations on the basis of prolonged practice but must qualify on the basis of formal training.

PRACTICE REQUIREMENTS

1. Candidates must maintain high ethical and professional standards.

2. Candidates must strive to increase their scientific knowledge.

3. Candidates must limit their practice to orthopaedic surgery.

4. Candidates who have had no approved training in children's orthopaedic surgery must confine their practice to fracture and adult orthopaedic surgery.

5. Candidates trained in resident orthopaedic training are required to complete a minimum of two years of orthopaedic practice subsequent to the completion of their formal training before becoming eligible for part 2 examinations.

6. Candidates in private or institutional practice must spend a minimum of 14 months in one locality immediately prior to application in order that practice may be properly evaluated.

7. Candidates employed full time in institutions may satisfy practice requirements by serving a minimum of two years, but minimum requirements may not be satisfied by mixing full-time institutional work with preceding or subsequent time in private practice.

METHOD OF EXAMINATION

1. Part 1 examinations consist of a written examination and oral examinations. Material covered includes fundamental surgical principles, elementary fracture and orthopaedic procedures, history-taking, and physical examinations as well as those parts of anatomy, pathology, physiology, and biochemistry related to orthopaedic surgery. The oral examinations consist of five parts: (a) anatomy, (b) pathology, (c) physiology and biochemistry, (d) surgery, and (e) fractures and orthopaedic surgery.

2. Part 2 examinations consist of a written examination and oral examinations. Material covered includes advanced work in all phases of orthopaedic surgery. The oral examinations consists of five parts: (a) anatomy, (b) pathology, (c) children's orthopaedic surgery, (d) fractures, and (e) adult orthopaedic surgery.

3. Candidates who have not had approved training in children's orthopaedic surgery will not be examined in that branch of orthopaedic surgery.

4. Candidates are notified by letter as to whether they passed or failed in the examinations. No information regarding results is available until such letters are mailed.

5. Results of integral parts of examinations are not available to either candidates or diplomates of the board.

6. Candidates who have passed part 1 examinations are required to take part 2 examinations within a 10 year subsequent period. If there is a lapse of more than 10 years, candidates must repeat part 1 examinations and must then become eligible by the requirements then in force.

MILITARY SERVICE

1. Medical officers who have elected service in the military forces as their life careers compete for certification on the same basis as do physicians in civilian practice.

2. Physicians who served for a minimum of one year in the military forces during the war years, between Jan. 1, 1941, and July 1, 1946, are granted a bonus of one year of practice credit, provided that the same time is not used for resident training credit.

3. Applicants who served in military hospitals whose service is judged by the board to have been equal to that of approved resident orthopaedic training may be granted a maximum credit of one year of resident orthopaedic training. Applicants requesting such credit must submit completed "Professional Training Records."

4. No applicant may be granted more than one year of resident training credit and one year of practice credit for military service during the war years.

5. Medical officers assigned to civilian institutions on the approved list for resident orthopaedic training receive the same credit as do civilian candidates.

6. Medical officers who have elected service in the military forces as their life careers must satisfy the practice requirements by military assignments in which their duties are limited to the practice of orthopaedic surgery.

RECORDS OF SURGICAL CASES AND INSPECTIONS

1. Records of a specified number of consecutive surgical cases may be requested by the board in order to evaluate properly the work of an applicant.

2. A representative of the board may visit a community in order to evaluate properly the work of an applicant.

AMERICAN BOARD OF OTOLARYNGOLOGY

GORDON D. HOOPLE, President,
Syracuse, N. Y.

BERNARD J. McMAHON, Vice-President,
St. Louis

LAWRENCE R. BOIES, Minneapolis

LOUIS H. CLERF, Philadelphia

FREDERICK T. HILL, Waterville, Maine

PERCY E. IRELAND, Toronto, Canada

FRANCIS L. LEDERER, Chicago

FRANCIS E. LEJUENE, New Orleans

JOHN R. LINDSAY, Chicago

WILLIAM J. McNALLY, Montreal, Canada

JAMES H. MAXWELL, Ann Arbor, Mich.

PHILIP E. MELTZER, Boston

WERNER MUELLER, Boston

C. STEWART NASH, Rochester, N. Y.

ARTHUR W. PROETZ, St. Louis

GEORGE F. REED, Boston

LeROY A. SCHALL, Boston

HARRY P. SCHENCK, Philadelphia

O. E. VAN ALYEA, Chicago

DEAN M. LIERLE, Secretary-Treasurer, University Hospitals,
Iowa City, Iowa

GENERAL REQUIREMENTS

The following general qualifications of candidates for examination are required by the board:

1. A candidate must have been a graduate for five years or more of a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association.

2. A candidate must be of known good moral character and be ethical in his professional relationships.

3. A candidate trained in a foreign country must be able to give proof of medical and graduate training comparable to the requirements of the board.

4. A candidate from the United States or the Dominion of Canada must be a member of the American Medical Association or of the Canadian Medical Association respectively or other such medical societies of equal standing as are recognized by the Council on Medical Education and Hospitals of the American Medical Association.

5. Candidates from foreign countries who have received their training in otolaryngology in the United States and the Dominion of Canada are eligible for examination at the discretion of the American Board of Otolaryngology, provided they meet the general academic requirements of the Board.

SPECIAL REQUIREMENTS

1. A candidate must have had a general internship of at least one year in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association.

2. A candidate must be proficient in the applied basic sciences, fundamental to the intelligent practice of otolaryngology. These include anatomy of the ear, nose, and throat, neck, chest, esophagus and nervous system, gross pathology and histopathology, bacteriology, physiology, didactic otolaryngology and the general fundamentals of surgery. (This requirement may be fulfilled in a residency or fellowship service or in an approved organized post-graduate course.)

3. In addition to the general internship, the required clinical training in otolaryngology may have been acquired in any of the following ways:

(a) A three years' residency or fellowship in otolaryngology approved by the Council on Medical Education and Hospitals of the American Medical Association.

(b) A four years' approved residency or fellowship in otolaryngology and ophthalmology provided one half of the training has been in otolaryngology.

(c) A two years' approved residency or fellowship in otolaryngology or a three years' approved combined residency or fellowship in otolaryngology and ophthalmology, provided two years have been in otolaryngology and have been preceded by at least one year's approved residency training in surgery or medicine, or by an additional year in an approved internship.*

4. In exceptional circumstances certain candidates who do not meet all of the above requirements may be accepted for examination on recommendation of the credentials committee, substantiated by action of the board.

5. At least one year must be spent in private, group, or institutional practice of otolaryngology after the period of special training. This requirement may be waived in cases of candidates from foreign countries who are returning there for the practice of otolaryngology. Should such a candidate pass the examination the certificate of the board will be withheld until the board has been furnished evidence that the candidate has spent one year in the practice of otolaryngology. (When the requirement of an additional year referred to in No. 5 may impose handicaps as to rating, in the Military or Veterans Administration Services, the candidate may be considered under No. 4 above.)

6. A candidate may be qualified for examination, at the discretion of the American Board of Otolaryngology, if in addition to the General Requirements and Special Requirements, No. 1 and 2, he has limited his practice to otolaryngology for seven years in association with a hospital staff approved by the Council on Medical Education and Hospitals of the American Medical Association.

7. A physician who limits himself exclusively to the practice of peroral endoscopy may be granted limited certification in this field by the American Board of Otolaryngology irrespective of certification in any other specialty. Limited certification will be granted provided the candidate has spent not less than one year of training in a hospital approved for endoscopic teaching and has passed successfully examinations in the basic sciences as they pertain to this field, and didactic and clinical examinations covering diseases of the larynx, pharynx, neck, esophagus, stomach, tracheobronchial tree, lungs and mediastinum and certain aspects of cardiovascular disease as they pertain to peroral endoscopy. A limited certificate by the American Board of Otolaryngology will not be issued to physicians who have been certified in a specialty that employs peroral endoscopy in diagnosis and/or treatment because his major interest is in that specialty, not in endoscopy.

All candidates must comply with current board regulations, regardless of the time of filing application.

APPLICATION AND FEES

1. Application must be made in duplicate on special blanks procured from the secretary. The completed application blanks must be returned to the secretary, together with the other required credentials, at least 120 days in advance of the examination at which the candidate desires to appear.

*See Standards for Residencies in Otolaryngology published by the American Medical Association.

2. The applications must be accompanied by two small photographs of the candidate, together with verification of the period of enrollment from the institutions where training in otolaryngology was obtained, and the names of two or more otolaryngologists, preferably diplomates of the board, from the vicinity of the candidate's place of residency, to be used as references.

3. The fee for the examination is \$150. Of this sum \$75 must accompany the application, of which \$50 shall be returned if candidate is not accepted for examination. No application will be acted on until the \$75 application fee is received. The remaining \$75 of the total examination fee of \$150 must be paid to the secretary on notification that the candidate has been accepted.

4. The fees have been carefully computed on a basis of cost of examinations and are used entirely for administrative expenses. Examiners serve without compensation other than actual expense.

5. The application remains valid for three years. An applicant must appear for examination within this time or forfeit the fee.

6. Candidates whose credentials have been found satisfactory and who meet the requirements of the board will be notified 90 days prior to the date of examination. The number of candidates who can be admitted to any one examination is limited. Due to a large number of applications on file, delay in assignment for examination may be inevitable. Appointments will be given in the order applications are accepted and on payment of the balance of the examination fee.

7. The board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed advisable and without stating the same, and the action of the board shall be final.

EXAMINATION

Examinations will be held at such time and place as the judgment of the board may dictate. Advance notice of examinations will be given in THE JOURNAL of the American Medical Association and the several special journals devoted to otolaryngology. Insofar as is possible these will be held bi-annually at, or near, the time and place of meeting of the American Medical Association, or special societies, and of the American Academy of Ophthalmology and Otolaryngology. The examinations cover from two to four days.

Scope.—This examination encompasses all phases of otolaryngology and peroral endoscopy, including maxillofacial surgery, and surgery of the neck, excluding the thyroid.

The type of examination is as follows:

1. Clinical, covering the actual handling of patients, including history-taking, physical and functional examinations, the use of laboratory and x-ray findings, and a discussion of differential diagnosis.

2. Didactic, oral examinations covering all phases of otolaryngology.

3. Gross and microscopic pathology.

4. A written examination may be included when the board deems this advisable.

AMERICAN BOARD OF PATHOLOGY

SHIELDS WARREN, President, Boston
 WILLIAM B. WARTMAN, Vice-President, Chicago
 JOHN J. ANDUJAR, Fort Worth, Texas
 ROGER D. BAKER, Durham, N. C.
 ISRAEL DAVIDSOHN, Chicago
 JAMES W. KERNOHAN, Rochester, Minn.
 DOUGLAS A. MACFADYEN, Chicago
 ALAN R. MORITZ, Cleveland
 JAMES N. PATTERSON, Tampa, Fla.
 S. BRANDT ROSE, Philadelphia
 JOHN R. SCHENKEN, Omaha
 EDWARD B. SMITH, Secretary-Treasurer, Indiana University
 Medical Center, 1040-1232 W. Michigan St., Indianapolis 7, Ind.

GENERAL REQUIREMENTS

1. Satisfactory moral and ethical standing in the profession.
 2. License to practice medicine or a certificate of the National Board of Medical Examiners.

3. The applicant must devote his time primarily and principally to the practice of pathology.

PROFESSIONAL EDUCATION

1. Graduation from a medical school in the United States approved by the Council on Medical Education and Hospitals of the American Medical Association, or graduation from medical schools in other countries acceptable to the board.

SPECIAL TRAINING AND EXPERIENCE

1. The board admits candidates to examinations who are otherwise eligible and who have had either of two following types of training and experience.

(a) After five years, if four of the five years have been in institutions approved by the Council on Medical Education and Hospitals of the American Medical Association or by the board; or

(b) After 11 years if none of the training and experience has been in institutions so approved.

2. The specific requirements for those acceptable after five years are as follows:

(a) Pathological anatomy only.

(1) Four years of supervised study and training in an institution approved for residency training in pathological anatomy by the Council on Medical Education and Hospitals of the American Medical Association or by the board. It is immaterial whether the candidate holds the title of resident or fellow or assistant. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship in any of the preclinical departments of a university for one of the four years. In addition, time, not to exceed 12 months, spent in a department of pathology of an approved school of medicine after the completion of the second year of undergraduate study may be counted for full credit toward the four years.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of pathological anatomy in a hospital approved by the American Medical Association or other institutions acceptable to the board.

(b) Clinical pathology only.

(1) Four years of supervised study and training in an institution approved for residency training in clinical pathology by the Council on Medical Education and Hospitals of the American Medical Association or by the board. It is immaterial whether the candidate holds the title of resident or fellow or assistant. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship, in any of the preclinical departments of a university, for one of the four years. Candidates holding also a master's or doctor's degree in a special field of clinical pathology (bacteriology, serology, chemistry, parasitology, or hematology) may obtain time credit for not more than 12 to 24 months toward the four years for this work, regardless of whether it was taken before or after the medical degree. The evaluation of time credit will depend on how much of the broad field of clinical pathology was covered in the graduate work.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of clinical pathology in a hospital approved by the American Medical Association or other institutions acceptable to the board.

(c) Pathological anatomy and clinical pathology.

(1) Four years of supervised study and training divided as follows: (a) two years of supervised study and training in pathological anatomy as outlined in the preceding paragraph 2-(a)-(1), (b) two years of supervised study and training in clinical pathology as outlined in the preceding paragraph 2-(b)-(1). Candidates declared eligible before July 1, 1953, may, at their own election, substitute one year (twelve months) of a straight or rotating clinical internship for one year of this special training in clinical pathology. After July 1, 1953, all candidates applying for both pathological anatomy and clinical pathology will be required to have two years of supervised training in clinical pathology.

(2) One additional year, which may be a continuation of the preceding or may be independent practice of both pathological anatomy and clinical pathology in a hospital approved

by the American Medical Association or other institutions acceptable to the board. After July 1, 1953, candidates who elect to claim credit for one year for a clinical internship must take this fifth year as supervised study and training in clinical pathology in institutions approved for residency training in clinical pathology by the Council on Medical Education and Hospitals of the American Medical Association or by the board. Candidates declared eligible after July 1, 1953, who do not take a clinical internship, may, after four years of training as outlined in 2-(1)-(a) and (b), spend the fifth year in independent practice in an institution or laboratory acceptable to the board.

Note: As outlined in the preceding paragraphs, the total time requirements of the board are unchanged after July 1, 1953, namely, five years of study or practice after graduation from medical school, with exceptions noted in sections 2-(a)-(1) and 2-(b)-(1).

3. The specific requirements for those acceptable after 11 years are as follows: (a) The practice of pathology under circumstances acceptable to the board for a period of not less than 11 years. At the election of the candidates, a period not to exceed one year of straight or rotating clinical internship may be substituted for one of the 11 years. For those candidates in this category who have had some special study and training in pathologic anatomy or clinical pathology acceptable supervised study and training, only seven years of practice are required.

CREDIT FOR MILITARY SERVICE

Credit may be allowed for training and experience in pathology in the federal services during the period July 1, 1940, to June 30, 1947. This credit for training or experience or both is given on an individual basis and will depend on the opportunity the applicant has had, as indicated by his or her medical service record in the specialty of pathology.

After July 1, 1947, credit for those military services will be given on the same basis as it is in civilian institutions, except that the rule in the preceding paragraph will not apply to reserve officers who continue on active duty or are called to active duty after that date.

SPECIAL FIELDS OF PATHOLOGY, CLINICAL CHEMISTRY, CLINICAL MICROBIOLOGY, HEMATOLOGY, AND NEUROPATHOLOGY (IN FORCE AFTER JULY 1, 1954)

The trustees of the American Board of Pathology have adopted the following requirements for certification in special fields of pathology, effective July 1, 1954.

Candidates who have met all general requirements and have had special training and experience that is acceptable to the board in a special field of pathological anatomy or clinical pathology may apply to the board for certification in that special field. The board, at its discretion, may approve this application, and after the candidate has successfully passed a prescribed examination or has fulfilled certain special qualifications (see below, section D), will issue a certificate designating the special field.

A. General Qualifications:

1. Satisfactory moral and ethical standing in the profession.
2. License to practice medicine or a certificate of the National Board of Medical Examiners.
3. The applicant must devote his time primarily and principally to the practice of pathology or the special field of pathology in which he is requesting certification.

B. Professional Education:

1. Graduation from a medical school in the United States approved by the Council on Medical Education and Hospitals of the American Medical Association or graduation from a medical school in other countries acceptable to the board.

C. Special Training and Experience:

The board admits candidates to examination in special fields of pathology who are otherwise eligible and who have had either of the following types of training:

1. Applicants already holding a certificate of the board in clinical pathology or the combined certificate in pathological anatomy and clinical pathology (for qualification in clinical chemistry, clinical microbiology, and hematology), or in pathological anatomy (for qualification in neuropathology)—two additional years of supervised training in the special field of

their choice in institutions approved by the Council on Medical Education and Hospitals of the American Medical Association or by the board.

2. Applicants not holding a certificate in pathological anatomy or clinical pathology—five years of training in the special field of their choice, provided four of the five years have been in institutions approved by the Council on Medical Education and Hospitals of the American Medical Association or by the board. Candidates may, at their own election, substitute not to exceed 12 months of a straight or rotating clinical internship or a fellowship or instructorship in any of the preclinical departments of a university for one of the four years. The fifth year may be a continuation of supervised training or may be independent practice of the particular specialty in a hospital approved by the American Medical Association or in other institutions acceptable to the board.

D. Special Qualifications—Certification Without Examination: Prior to Jan. 1, 1960, the board at its discretion may certify candidates without examination if the following conditions have been met as of Jan. 1, 1955:

1. That the candidate has been for a period of five years of professorial rank in the special field of his choice and in an approved medical school, or

2. That the candidate has been practicing his specialty for 10 years in a senior position in a hospital having an adequate department in the special field, approved by the Council on Medical Education and Hospitals of the American Medical Association, or in an institution acceptable to the board.

APPLICATION BLANK AND FEE

Application must be made on the special form that may be procured from the secretary and forwarded with other required credentials and the application fee. An application cannot be given consideration by the board unless it is accompanied by the application fee.

The application or examination fee for candidates is \$100. If the candidate fails in his examination he will be admitted to a second examination after one year. The applicant must pay an additional fee of \$50 before a second examination will be given.

The application fee of \$100 has been determined after careful consideration and is based on actual estimates of the expenses of examination and administration. None of the board members receives any compensation for his services except actual expenses incurred.

If the applicant, for any reason, is deemed ineligible for examination by the board, his fee will be returned; however, the application fee is not returnable after the candidate has officially been accepted for examination and notified to report for the examination.

EXAMINATIONS

Written and oral examinations will be held at the discretion of the board at or near the time and place of national medical meetings. If a number of applications from any region of the country are received, an examination in conjunction with a national medical meeting in that section will be arranged so that the financial outlay of the applicant in meeting the examiners will be as small as possible.

The examinations are to be based on the broad principles of pathology with emphasis on diagnosis, interpretation and technique. The applicant may apply for certification in either pathological anatomy or clinical pathology or both.

The examinations in pathological anatomy consist of a written test, an oral examination on gross pathology, and a practical examination in microscopic pathology. The examination in clinical pathology consists of a written test and an oral and practical examination in the six phases of clinical pathology: bacteriology, hematology, clinical chemistry, parasitology, serology, and clinical microscopy.

DEFINITIONS

1. Pathological anatomy is that branch of pathology that deals with the morphological aspects of disease, recognition being given that that definition covers two phases of pathology: (a) the applied phase with special attention to the description and diagnosis of gross and microscopic specimens, (b) the academic phases of teaching and general morphological diagnosis.

2. Clinical pathology is that branch of pathology that deals with bacteriology, immunology, clinical chemistry, parasitology, hematology, endocrinology, clinical microscopy, and the application of the physical and biological sciences to the diagnosis, prognosis, and treatment of disease.

CRITERIA FOR APPROVAL OF INSTITUTIONS FOR TRAINING
IN PATHOLOGY

In Sections C-2-a, C-2-b, and C-2-c of the General Requirements, it is stated that candidates must have certain periods of supervised study and training. The American Board of Pathology, in cooperation with the Council on Medical Education and Hospitals of the American Medical Association, certifies hospitals in the United States as satisfactory for this supervised study and training. Lists of these hospitals are published in the Internship and Residency Number of *THE JOURNAL* of the American Medical Association each year. In addition, the American Board of Pathology recognizes certain hospitals outside the United States and certain laboratories not connected with hospitals in the United States. Inquiries concerning these should be directed to the secretary of the board.

The general criteria for approval of hospitals and laboratories are both qualitative and quantitative. On the score of quality, consideration is given to the qualifications of the director of laboratories and in the associates and assistants, the supervision of work of the person in training, the excellence of the educational program, and the exactness and completeness of the laboratory work performed. On the score of quantity, consideration is given to the volume and distribution of laboratory work, both in absolute numbers and in relation to the size of the hospital, to the diversity and completeness of tests performed, to the size and equipment of the laboratory, and to the number of professional and nonprofessional personnel in relation to the volume of work.

In general, the qualitative standards will determine whether or not a hospital or laboratory is approved and the quantitative standards will determine whether the approval is for one, two, three, or four years of credit toward the requirements of the board.

In evaluation of applications the board takes into consideration the following criteria:

1. Director of laboratories or pathologist:

(a) It is required that the responsible head of the laboratory hold the certificate of the American Board of Pathology in the subject for which the hospital is approved, or be eligible for certification, and that he or she spend full time in the hospital. Full time is not interpreted in terms of hours, but rather that the director have no obligation outside the one approved hospital except in a university department of pathology in which he and the residents have an opportunity to participate in the educational program;

(b) In special instances, the equivalent of full time by two or more qualified persons will be accepted and one person need not spend the entire working day in the laboratory;

(c) In special instances, two or more hospitals will be approved as a unit with a single full-time director of laboratories if it is apparent that a satisfactory training program can be conducted;

(d) In hospitals with over 350 beds, it is expected that the professional staff, in addition to the pathologist, will include one or more persons with special training and qualifications in the sub-specialties of clinical pathology.

2. Technicians:

There are no absolute criteria, but it is expected that the number of technicians will be proportional to the volume of laboratory work and that, insofar as possible, the technicians will hold the certificate of the Registry of Medical Technologists of the American Society of Clinical Pathologists.

3. Floor space of laboratory:

In general, it is believed that the size of the laboratory should be related to the size of the hospital and the volume of laboratory work. A minimal ratio is 4 square feet of space in the laboratory, including morgue and autopsy room, for each bed in the hospital.

4. Equipment for the laboratory:

The variety and completeness of laboratory tests performed depend on the size of the hospital. In all hospitals there should be facilities for the more common test in clinical

pathology, for study of surgical specimens, and for performance of autopsies. In larger hospitals, the variety of tests performed should be larger, and in hospitals with over 500 beds all recognized laboratory procedures should be available for study and treatment of the patients.

5. Autopsy percentage:

No institution with a percentage of less than 15 will be approved, and those institutions with percentages between 15 and 40 will be given special scrutiny.

6. Examination of surgical specimens:

All surgical specimens should be sent to the laboratory for gross examination, and microscopic examinations should be made unless there are general or special reasons not to do so.

7. Indices:

There should be indices according to the names of the patients and the diagnoses of all surgical and autopsy material. Indices of clinical pathology are left to the discretion of the hospital.

8. Museum:

There should be available fixed anatomic and pathological specimens for study by the staff in proportion to the size of the hospital. Properly filed and indexed color photographs may in part be substituted for museum specimens.

9. Library:

A reasonable complete library of modern books and recent unbound and bound journals should be available to the hospital, and the more commonly used books and journals should be on hand in the laboratory.

10. Education program:

The work of the person in training should be supervised. Conferences, seminars, journal clubs, and demonstrations should be conducted as frequently as the volume of material and the size of the staff justifies. A clinicopathological conference must be held at least every two weeks.

11. Volume of laboratory work:

(a) As indicated in the following categories, no hospitals with less than 75 autopsies, 1,000 surgical specimens, and 25,000 tests in clinical pathology annually will be approved (Category D), except as outlined in the following paragraphs. It is the belief of the board that less material than this is inadequate for the training of a pathologist.

(b) In the field of clinical pathology, there should be a reasonable diversification of tests, and in each category there should be sufficient absolute volume to provide training and experience. There are no absolute criteria, but special scrutiny will be given to a hospital in which there is not a reasonable diversification and variety.

(c) In the field of pathological anatomy, a deficiency in either autopsies or surgical specimens may be made up by an excess of the other, if the deficiency does not exceed 20% of the minimum required in the ratio of one autopsy to 75 surgical specimens. Thus in a hospital approved for one year in pathological anatomy and clinical pathology, the minimums are 75 autopsies and 1,000 surgical specimens. If a hospital has 2,500 surgical specimens, it is acceptable if there are only 60 autopsies.

If a hospital has met these minimal qualitative and quantitative standards, it will then, on the basis of the following quantitative standards, be approved for one, two, three, or four years of training in pathological anatomy, or clinical pathology, or both, or some special field as shown for the number of residents indicated.

CATEGORY A. In both pathological anatomy and clinical pathology for four years (as required of all candidates seeking certification in both fields who are examined after July 1, 1952).

Minimum: 150 autopsies, 1,750 surgical specimens, and 65,000 tests in clinical pathology for four residents. Additional resident for each 50 autopsies or 500 surgical specimens, or 20,000 tests in clinical pathology.

CATEGORY B. In both pathological anatomy and clinical pathology for three years. This meets all requirements of the board for supervised training until July 1, 1952. Candidates examined after that date who seek certification in both subjects must take an additional year of supervised training in clinical pathology or pathological anatomy in another hospital that is approved for the deficiency of training required.

Minimum: 125 autopsies, 1,500 surgical specimens, and 50,000 tests in clinical pathology for three residents. Additional resident for each 50 autopsies, 500 surgical specimens, or 20,000 tests in clinical pathology.

CATEGORY C. In both pathological anatomy and clinical pathology for two years. Candidates taking two years in these institutions must have an additional year (two years after July 1, 1952) in an institution in category A, B, or D.

Minimum: 100 autopsies, 1,250 surgical specimens, and 40,000 tests in clinical pathology for two residents. Additional resident for each 50 autopsies, or 500 surgical specimens or 20,000 tests in clinical pathology.

CATEGORY D. In both pathological anatomy and clinical pathology for one year. Candidates taking training in these institutions must have an additional two years (three years after July 1, 1952) in institutions that are approved for the deficiency of training required.

Minimum: 75 autopsies, 1,000 surgical specimens, and 25,000 tests in clinical pathology for one resident. Additional resident for each 50 autopsies, or 500 surgical specimens, or 20,000 tests in clinical pathology.

CATEGORY E. In pathological anatomy only, for three or more years. Candidates taking all training in these institutions will not be eligible for certification in clinical pathology unless an additional year (two years after July 1, 1952) is taken in clinical pathology in institutions that are approved for the deficiency of training required.

Minimum: 175 autopsies and 1,500 surgical specimens for three residents. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY F. In pathological anatomy only, for two years. Candidates taking training in these institutions will not be eligible for certification in clinical pathology unless they take one additional year full time in clinical pathology (two years after July 1, 1952) in institutions that are approved for the deficiency of training required, and will be eligible in pathological anatomy only if another year is taken in another institution that is approved for one or more years in pathological anatomy.

Minimum: 125 autopsies and 1,250 surgical specimens for two residents. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY G. In pathological anatomy only, for one year. Candidates training in these institutions will not be eligible in both pathological anatomy and clinical pathology unless they take an additional year in pathological anatomy and an additional year (two years after July 1, 1952) in institutions that are approved for these periods of training. Candidates seeking certification in pathological anatomy only must study an additional two years in institutions that are approved for that period of training.

Minimum: 75 autopsies and 1,000 surgical specimens for one resident. Additional resident for each 50 autopsies or 500 surgical specimens.

CATEGORY H. For postmortem part of pathological anatomy for two years. Credit is never allowed for more than two years. Candidates taking training in these institutions may pursue further training as follows: 1. For pathological anatomy only. An additional year in an institution in Category A, B, C, E, F, or G with assignment to surgical pathology principally. 2. For pathological anatomy and clinical pathology. An additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology and one-half year assigned to surgical pathology principally, in an institution in Category A, B, C, or J.

Minimum: 125 autopsies for two residents. An additional resident for each 60 autopsies.

CATEGORY I. For postmortem part of pathological anatomy for one year. Candidates taking training in these institutions may pursue further training as follows: 1. For pathological anatomy only. An additional two years in an institution in Category A, B, C, E, F, or G with general assignments. 2. For pathological anatomy and clinical pathology. An additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology and one year to an institution in Category A, B, C, E, F, or G.

Minimum: 75 autopsies for one resident.

CATEGORY J. Surgical pathology part of pathological anatomy for one year. Credit is never allowed for more than one year and the director of the laboratory must hold the certificate of the American Board of Pathology in pathological anatomy or be eligible for certification. Candidates training in these institutions may pursue further training as follows: (1) For Pathological Anatomy only. An additional two years in an institution in Category H or in an institution in Category A, B, or C with assignment to postmortem pathology only. (2) For Pathological Anatomy and Clinical Pathology an additional year (two years after July 1, 1952) in an institution in Category A, B, C, L, M, or N with assignment to clinical pathology full time, and an additional year to an institution in Category A, B, D, E, F, G, or H with assignment to postmortem pathology full time.

Minimum: 2,000 surgical specimens for one resident. An additional resident for each 1,000 surgical specimens.

CATEGORY K. Special pathology as part of pathological anatomy. Credit for not to exceed one-fourth the time credit (one year if seeking certification in pathological anatomy only, six months if seeking both pathological anatomy and clinical pathology) of candidates applying in pathological anatomy may be taken in special laboratories with limited activities such as neuropathology, orthopedic pathology, ophthalmic pathology, etc. The candidate who receives credit in this category may, on request, have the field of special pathology designated on the certificate of the board.

CATEGORY L. Clinical pathology for three or more years. Candidates taking three years of training in these institutions will not be eligible for pathological anatomy unless they take an additional two years in institutions approved for pathological anatomy.

Minimum: 100,000 tests in clinical pathology for three residents. Additional resident for each 50,000 tests.

CATEGORY M. Clinical pathology for two years. Candidates taking two years' training in these institutions must take the same additional training as in Category L to be eligible for pathological anatomy also. To be eligible for clinical pathology only, an additional year of clinical pathology must be taken in an approved institution.

Minimum: 75,000 tests in clinical pathology for two residents. An additional resident for each 50,000 tests.

CATEGORY N. Clinical pathology for one year. Candidates taking training in those institutions must take an additional two years in an institution in Category A, B, C, L, or M assigned to clinical pathology for eligibility in clinical pathology only. To be eligible in pathological anatomy and clinical pathology, an additional two years in approved institutions is required.

Minimum: 50,000 tests in clinical pathology for one resident.

CATEGORY O. Special clinical pathology as part of clinical pathology. Candidates applying for clinical pathology only may receive credit for not in excess of one-quarter of the training period (one year if seeking certification in clinical pathology only, six months if seeking both pathological anatomy and clinical pathology) for work in a special field of clinical pathology, such as bacteriology, serology, etc. Under these circumstances, on request, the special field will be designated on the certificate of the board.

CATEGORY P. Research: Residence in certain institutions in which full time is devoted to research with a direct application to the practice of pathological anatomy or clinical pathology may be accepted for credit not to exceed one-third the time requirement (20 months if no clinical internship, 16 months if a clinical internship was taken). The board encourages research and believes that all candidates should carry on investigation during their training in all institutions. Therefore, this category is only for those wishing to do full time research.

AMERICAN BOARD OF PEDIATRICS

LEE F. HILL, President, Des Moines, Iowa
 JAMES MARVIN BATY, Vice-President, Boston
 ROBERT B. LAWSON, Secretary-Treasurer, Miami, Fla.
 JOHN A. BIGLER, Chicago
 JAMES C. HUGHES, Memphis, Tenn.

J. A. JOHNSTON, Detroit
 WALDO E. NELSON, Philadelphia
 RALPH V. PLATOU, New Orleans
 A. ASHLEY WEECH, Cincinnati
 JOHN MCK. MITCHELL, Executive Secretary, 6 Cushman Rd.,
 Rosemont, Pa.

REQUIREMENTS FOR CERTIFICATION*

All candidates for examination for certification must meet the following requirements:

1. Graduation from an approved medical school.
 2. Hold a license to practice in the United States prior to issuance of a certificate except in those situations in which a license to practice is not required.

3. One year of rotating, pediatric, or other internship in an approved hospital.

4. Two years of specialized residency-type training in an approved pediatric center.

At least one year of the two years of required residency training must be a full-time medical pediatric inpatient residency or internship in an approved institution. The second year of required residency training may be met in the ways listed below, although the board recommends that whenever possible candidates complete the two years as regular residents.

(a) Graduate School courses will be accepted only in exceptional cases by prior arrangement, up to a maximum of nine months.

(b) A maximum of three months' credit each is allowed for full-time residency type training in allied pediatric subjects such as pediatric allergy, pediatric psychiatry, pediatric pathology, pediatric radiology, newborn service, etc.

(c) A maximum of six months' credit is allowed for residency training in an approved contagious disease hospital.

5. A subsequent term of two years of specialized study or practice or a combination of the two.

Credit for one year toward this requirement is allowed for medical military service regardless of the assignment. The maximum credit that any candidate may receive toward the practice requirement for work done prior to the completion of residency training is one year.

Research residencies which involve little or no clinical training are creditable for only three months. Research residencies which include significant clinical training may be pro-rated to a total of six months for a year of service. Teaching fellowships may not be offered in lieu of residency appointments.

Both research residencies and teaching fellowships are, of course, entirely acceptable in satisfaction of the practice or further study requirement. Portions of a research residency not applicable for residency training credit may be carried over for practice credit.

Preceptorships are not accepted for credit toward the residency requirement, but are accepted toward the practice requirement.

GRADUATES OF MEDICAL SCHOOLS IN CANADA

Graduates of approved medical schools in Canada and those who have received their internship and residency training in pediatrics in hospitals approved by the Royal College of Physicians and Surgeons of Canada will be eligible for examination for certification under the same regulations as those trained in the United States.

GRADUATES OF FOREIGN MEDICAL SCHOOLS

Citizens of the United States.—Citizens of the United States of America who are graduates of medical schools other than those in the United States and Canada will be processed for eligibility for examination for certification if they can meet all the following requirements:

1. They are graduates of medical schools recommended by the Council on Medical Education and Hospitals of the American Medical Association.

* To avoid misunderstanding, the board urges any candidate whose training is not clearly covered in these regulations to communicate with the office of the executive secretary. Whenever possible, this should be done before entering upon the appointment in question.

2. They hold a license to practice in the United States.

3. They can meet the internship and residency training requirements of the board as detailed above with the following provisions:

(a) Internship and residency training must be served in hospitals approved by the board in the United States.

(b) A maximum of the internship and one year of residency training may be allowed for such experience obtained in a small list of foreign hospitals recognized by the board. The other year of residency training must be served in a straight inpatient medical pediatric residency appointment in an approved hospital in the United States.

Citizens of the United States of America who are graduates of medical schools other than those in the United States or Canada, and which are not recommended by the Council on Medical Education and Hospitals of the American Medical Association, may be accepted for examination for certification after they have passed successfully Part II of the examinations of the National Board of Medical Examiners, Inc., provided they meet all other requirements of the Board as provided in regulations governing such candidates. It should be noted that this regulation is permissive, not mandatory. Each application will be evaluated individually.

Citizens of Other Countries.—Properly qualified candidates who are permanent residents in and citizens of other countries and are licensed to practice there and who have fulfilled the residency training requirements listed above in the United States or Canada may apply for examination for certification by the American Board of Pediatrics.

Such foreign candidates who are returning to their own country at the end of their training period may be examined without completion of two full years in the practice of pediatrics. The residency training requirements must be completed in full in advance of admission to any part of the examinations.

A special certificate, appropriately identified to distinguish it from the regular certificate of this board, may be issued to such candidates who have passed successfully the examinations of this board after they have completed such a period of practice or further study in their own country which, when added to similar experience in the United States or Canada, make a total of two years of the practice of pediatrics.

INFORMATION CONCERNING EXAMINATIONS

The examinations for certification are given in two sections: Part I is written; Part II is an oral examination.

Part I—Written

Written examinations are objective in type and are given once each year, usually in January, simultaneously at a number of places scattered throughout the country, and at a few military stations abroad. Candidates must pass the written examination before admission to the oral examination will be authorized.

Part II—Oral

Oral examinations are held four to six times each year at centers offering suitable facilities, in locations determined by proximity to the largest number of eligible candidates. One examination session each year is scheduled at a location closer to candidates from some less populous area. As far as possible, candidates are given a choice of locations, taking into account date application is filed, date of eligibility and proximity to the examination site.

Candidates who are admitted to the oral examination (Part II) will not be informed of their grade on the written portion. Their relative standing in Part I will, however, be utilized in final decision with regard to passing.

Candidates who fail after taking Part II will not be required to retake Part I but may be advised to do so in order that they may have an opportunity to improve a low score.

APPLICATION

Application must be made on special blanks, which will be furnished by the executive secretary after a preliminary survey of the applicant's training. Applications may be submitted one year in advance of eligibility date; they will not be accepted earlier. The number of candidates admitted to a given written

examination will be determined by the number who can be examined orally during that year, plus a reasonable number of alternates.

LETTERS OF RECOMMENDATION

Letters from two competent pediatricians recommending each applicant must be sent to the executive secretary of the board. These letters should not accompany the application but should be sent directly to the executive secretary.

FEEES

The application fee is \$75.

The full fee must be remitted with the application. Refund will be made only if the applicant is refused examination for reason other than failure in the same.

No additional fee is required for second and third written examinations. The fee for second and third oral examinations is \$50 each.

CERTIFICATION IN SUBSPECIALTY OF ALLERGY

WILLIAM C. DEAMER, Chairman, San Francisco

JEROME GLASER, Rochester, N. Y.

GEORGE B. LOGAN, Rochester, Minn.

HARRY L. MUELLER, Boston

JAMES OVERALL, Nashville, Tenn.

BRET RATNER, New York

The American Board of Pediatrics has established certification in allergy as a subspecialty of pediatrics.

All candidates must pass the written and oral examinations in pediatrics before submitting an application for examination in allergy.

Each allergy application is individually considered and must be accepted by the subspecialty board.

INFORMATION CONCERNING EXAMINATIONS

Allergy examinations consist of written and oral portions. The written examination will be given once a year under a local monitor and must be passed before admission to the oral examination will be authorized. Oral examinations will be held at times and places designated by the chairman of the subspecialty board. Ample notice will be sent to candidates by the executive secretary.

FEEES

The application fee for certification in allergy is \$100.

The full fee must be remitted with the application.

No additional fee is required for second and third written examinations. The fee for second and third oral examinations is \$50 each.

Application forms will be forwarded on request to the office of the Executive Secretary of the American Board of Pediatrics and should be returned to that office when completed. All correspondence should be addressed to him.

REQUIREMENTS

1. Certification in pediatrics.
2. Two years full time of approved allergy residency or fellowship training in an approved clinic and its hospital, or
3. One year full time of approved allergy residency or fellowship training and two years, part-time, 200 hours a year in an approved clinic and its activities, or
4. Five years, part-time, 200 hours a year in an approved allergy clinic and its activities.
5. Preceptorship alone is not acceptable, but a resident or fellow doing full-time work in allergy may spend part of his time working with private patients in the hospital or in the office of an allergist qualified to give this training.

Until clinics are officially approved, the candidate should assure himself that the clinic is satisfactory for training by writing to the executive secretary of the Board of Pediatrics. In general such clinics will be in hospitals that have been accepted by the Council on Medical Education and Hospitals of the American Medical Association and by the American Board of Pediatrics for training in pediatrics, or have been approved for training in allergy by the Board of Pediatric Allergy or of Internal Medicine.

Under all methods of study there must be presented evidence of serious work in research or clinical investigation.

The candidates must be prepared for a searching examination in the theory and practice of allergy. This will include the theory of the underlying mechanisms, animal experimentation, the clinical manifestations in the so-called allergic diseases, especially as they appear in infants and children, and also the allergic factors that may be present in other diseases. They must be prepared to discuss the important diagnostic procedures and methods of treatment and, in controversial matters, they must be familiar with the arguments on both sides of the questions.

CERTIFICATE

When accepted the diplomate will receive from the American Board of Pediatrics a certificate in allergy and will be listed as a specialist in allergy.

Prospective applicants for certification in the subspecialty of allergy may apply to the executive secretary of the American Board of Pediatrics.

AMERICAN BOARD OF PHYSICAL MEDICINE AND REHABILITATION

EARL C. ELKINS, Secretary-Treasurer, 200 First St. S.W., Rochester, Minn.

QUALIFICATIONS

- A. Satisfactory moral and ethical standing in the profession.
 - B. A legal license to practice medicine in one or more of the states of the United States, its territories, the District of Columbia, or one or more of the provinces of Canada.
 - C. Graduation from a medical school approved by the Council on Medical Education and Hospitals or graduation from a foreign medical school which, in the opinion of the board, offers medical education equivalent to such an approved school; completion of an internship in a hospital approved by said Council.
 - D. A period of study after the internship of not less than three years in a residency approved by the above mentioned Council. This period of study shall include graduate training in basic sciences as related to physical medicine and rehabilitation and not less than two years of clinical training and experience in physical disabilities related to the fields of rheumatology, neurology, neurosurgery, orthopedics, and medicine.
 - E. An additional period of not less than two years in full time practice of physical medicine and rehabilitation.
- Training in approved residency programs in closely allied medical-surgical fields may be acceptable in part (for "D" above), but such credit is limited and based on individual interpretation by the board.
- In selected cases, a candidate may be deemed eligible for examination on the basis of eight years of full time practice in physical medicine and rehabilitation (as a substitute for "D" and "E" above).

EXAMINATION

The examination for certification is given in two parts. Part I is written, part II, oral. Examinations are given once a year and cover certain aspects of the basic sciences and the clinical aspects of physical medicine and rehabilitation (including the role of associated personnel such as the physical therapist, occupational therapist, clinical psychologist, social service worker, and vocational guidance counselor).

APPLICATION

The application form shall contain a record of the candidate's premedical and medical education, internship, graduate study, and verification of full time practice in the specialty. The ap-

plication shall be accompanied by a fee of \$100, which will cover the evaluation and both the written and oral examination. (In case of rejection of application, \$85 will be refunded. The remaining \$15 constitutes the evaluation fee.)

CERTIFICATION

Certificates of the board shall be issued to the effect that the applicant has been found qualified as a specialist in physical medicine and rehabilitation.

AMERICAN BOARD OF PLASTIC SURGERY

FREDERICK A. FIGI, Chairman, Rochester, Minn.
 S. MILTON DUPERTUIS, Vice-Chairman, Pittsburgh
 TRUMAN G. BLOCKER JR., Galveston, Texas
 ALBERT D. DAVIS, San Francisco
 WILLIAM H. FRACKELTON, Milwaukee
 PAUL W. GREELEY, Chicago
 JAMES B. JOHNSON, Beverly Hills, Calif.
 EDWARD A. KITLOWSKI, Baltimore
 JACOB J. LONGACRE, Cincinnati
 ROBERT E. MORAN, Washington, D. C.
 GERALD B. O'CONNOR, San Francisco
 KENNETH L. PICKRELL, Durham, N. C.
 LYNDON A. PEER, Newark, N. J.
 CLARENCE R. STRAATSMA, New York
 FRANK MCDOWELL, Secretary-Treasurer, St. Louis
 MRS. ESTELLE E. HILLERICH, Corresponding Secretary,
 4647 Pershing Ave., St. Louis 8, Mo.

GENERAL REQUIREMENTS

1. Moral and ethical standing in the profession satisfactory to the board.

The board, believing that the practice of "fee splitting" is pernicious, leading as it does to traffic in human life, will reserve the right to inquire particularly into any candidate's practice in regard to this question.

2. Those whose activities are limited to the practice of plastic surgery.

3. This board will accept as applicants for examination only those who are full citizens of the United States or Canada. Notarized statements, not original citizenship papers, attesting to the fact of full citizenship in the United States or Canada must be furnished by foreign-born applicants when the application is filed. Such candidates must have at least two years of practice in plastic surgery in North America after completing the training required by the board.

PROFESSIONAL REQUIREMENTS

The board considers the requirements outlined below to be minimal in attaining its purposes and encourages candidates to take advantage of broadening experience in other fields. Candidates must fulfill the requirements that are in force at the time of their examination and/or certification.

1. Graduation from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association, or graduation from a foreign school considered acceptable by the board.

2. Completion of an internship of not less than one year in a hospital approved by the same Council.

3. Two years of postgraduate work in general surgery, beyond the intern year, as a resident or an assistant resident in a hospital approved by the same Council.

4. Training in general plastic surgery, including maxillofacial surgery, for an additional period of not less than two years in a residency approved by the same Council, or in a preceptorship approved by the Board. In fulfilling this requirement, there is a limit of one year's credit given for all work done in all governmental plastic surgery residencies (Army, Navy, Veterans Administration hospital, etc.) regardless of the time put in by trainees in such residencies. It is required that all such trainees take one additional year of approved training in plastic surgery in a civilian residency or preceptorship.

5. During these years of training following the internship year, a candidate must hold positions of increasing responsibility for the care and management of patients with surgical condi-

tions. When a candidate receives his training in more than one institution, it is equally imperative that he hold positions of increasing responsibility. He must have sufficient operative experience to acquire surgical skill and judgment through the performance of surgical operations with a high degree of responsibility, but under circumstances providing adequate opportunity for consultation and advice.

6. An additional period of not less than two years of practice in plastic surgery. If a candidate elects to spend one or two additional years in approved training in plastic surgery, one year of such training will be credited toward the required two years of private practice if it can be demonstrated that the candidate held a position of increasing responsibility. It is imperative that one year be in actual private practice in such instances.

The Board gives credit *only* for training in plastic surgery received in the United States or Canada, but may, at its discretion, give credit towards the required private practice period for training in plastic surgery received in countries other than the United States and Canada, each case being determined individually.

The above training in plastic surgery may be taken as a resident in an approved hospital or under an approved preceptorship offering equivalent training (a list of currently approved preceptorships is available from the board office). By the latter statement it is meant that one may secure the necessary and specified training as an assistant to an accredited plastic surgeon provided suitable facilities for the education of the candidate are offered.

The period of special training should emphasize the relation of the basic sciences—*anatomy, pathology, physiology, biochemistry, bacteriology*—to the application of surgical principles which are fundamental in all branches of surgery, and especially to plastic surgery. In addition, the candidate must understand and be trained in the following subjects: the care of emergencies, shock, hemorrhage, blood replacement, electrolyte and fluid balance, choice of anesthetics, chemotherapy, acidosis and alkalosis, narcotics and hypnotics, wound healing, etc.

The board reserves the privilege of requesting lists of operations done solely by the candidate for one or more years, or of requesting special and extra examinations, written or oral and practical, and of requesting any specific data concerning the candidate that may be deemed advisable before making final decision for certification.

Eligibility rulings or an evaluation of a candidate's qualifications or training cannot be made by the secretary or by any one member of the board. Official evaluations of qualifications are made only by the committee on credentials and requirements, or by the entire board where necessary, after a review of the candidate's formal application for such rulings. The applicant must allow at least two months for such requests to make the rounds of the committee.

TRAINING FACILITIES

Residencies.—The American Board of Plastic Surgery, in cooperation with the Council on Medical Education and Hospitals of the American Medical Association and the American College of Surgeons, evaluates training facilities in institutions providing acceptable residencies in plastic surgery. The board does not assume the responsibility for independent inspection and approval of residencies. It will inspect and make recommendations for or against approval of a residency in plastic surgery only after the director of the residency has applied to the Residency Review Committee in Plastic Surgery of the Council on Medical Education and Hospitals of the American Medical Association for approval of the residency, and after the Council has notified the board to that effect. Therefore, any diplomate of the board wishing approval of a residency under his supervision should apply to the Council for such approval.

The board will make its own inspection, preferably at the same time as the American Medical Association Council inspection, and will report its findings to the Council. Upon completion of consideration by the Council and the board, the hospital will be notified by the Council of the joint action that has been taken, and the hospital and the secretary of the board will be notified simultaneously by the Council to avoid any misunderstanding as to the status of the program.

Preceptorships.—In certain instances the board will accept, in lieu of the required two years' training in an approved residency, training in an approved preceptorship under a fully qualified plastic surgeon when such preceptorship is properly organized and supervised to give the trainee adequate experience and training in plastic surgery of a well-rounded nature. Trainees will be required to keep a detailed record of their experience, presenting this report to the board annually on a report form supplied by the board on request. In preceptorship programs of training it would be well for the preceptor to report annually to the board the name and qualifications of any preceptee under his supervision and the work done by the preceptee. Neither the board nor its individual members can be responsible for the placing of applicants for training. The board considers those residencies approved by the Council on Medical Education and Hospitals of the American Medical Association as acceptable facilities for training in plastic surgery.

It should be kept in mind by all that the primary interest of the board is to encourage well-rounded training in plastic surgery with the aim of producing plastic surgeons capable of doing good work in the wide variety of cases which may come under their care. The standards set up by the board, both for preliminary general surgery and for specialized plastic surgery training, are established in an effort to further this aim. The quality of the training received should be reflected in the candidate's ability to achieve good results in his practice, and the examinations of the board are an attempt to judge the ability of the candidate in the specialty of plastic surgery.

Before training in plastic surgery is begun, the plastic surgeon in charge of the residency or preceptorship should ascertain that the trainee's preliminary training in general surgery meets the requirements of the board, that is, two years of residency training in general surgery after the internship year.

The training in plastic and maxillofacial surgery (at least two years) whether in a residency or a preceptorship, should cover a wide field of plastic surgery, both as to type and anatomic distribution. It should include experience in the treatment of congenital and acquired defects and deformities of the face, neck, body, and extremities, for both functional and esthetic reasons. There should be available sufficient material of a diversified nature so that the trainee will be able to pass the examinations of the board after the period of training and the two additional years of private practice. If the available material on one service is inadequate, the deficiency should be made up by affiliation with another plastic surgeon on another service so that a broad experience will be obtained in plastic surgery. The trainee should be provided an opportunity to operate under the direct supervision of the plastic surgeon in charge, and with increasing ability, should be given an opportunity to operate independently on suitable cases under more remote supervision.

MILITARY CREDIT

Credit for military service is given on an individual basis, each case being considered on its own merits and the amount of credit allowed is determined by the board when the information is submitted with the application.

The Medical Officer's Professional Training Record (DD Form 408) is a record maintained by individual Medical Corps officers for presentation to the various authorized accrediting boards toward certification. This record is presented by the officer to the boards for evaluation of the military experience acquired by Medical Corps officers while serving in the Army Medical Service. This form has been prepared by the Surgeons General of the armed services with the assistance of the Council on Medical Education and Hospitals of the American Medical Association and is distributed by the offices of the Surgeons General to their personnel. It is highly important that prospective applicants obtain a copy of this form and that it be submitted with their credentials for evaluation by the board.

CASE REPORTS

Upon approval by the board of a candidate's application for certification, each candidate is required to submit to the board 35 or more case reports illustrative of his independent work in the field of general plastic surgery.

Candidates are admitted to examination only after submitting case reports that meet the required standards of the board and that have been approved by the committee on credentials and requirements.

Case reports must be submitted within one year from the time of such request; otherwise a new application must be filed. The case reports shall conform to conditions which the board may from time to time specify.

Case reports must be received in the office of the board by January 1 for those who desire to be considered for the spring (May-June) examinations of the board and by July 1 for the fall (October-November) examinations. There will be no exceptions to these two deadlines.

The 35 case reports must be of a diversified nature and must be submitted to the office of the board together with before and after photographs. They should be of the following distribution:

1. Cleft lip: 1 to 3 cases
2. Cleft palate: 1 to 3 cases
3. Traumatic defects requiring reconstructive surgery:
 - (a) Face and neck: 2 to 4 cases
 - (b) Body: 1 to 4 cases
 - (c) Extremities: 1 to 6 cases
4. Acute burns: 2 to 4 cases
5. Fracture of facial bones, excepting nasal fractures: 1 to 3 cases
6. Esthetic operations of sufficient variety: 6 to 12 cases
7. Plastic surgery of the hand: 2 to 4 cases
8. Malignancies, or conditions prone to malignancies (eradication and repair):
 - (a) Face: 2 to 4 cases
 - (b) Body: 1 to 3 cases
 - (c) Extremities: 2 to 4 cases
9. Congenital anomalies: 1 to 6 cases
 - (a) Examples:
 - (1) Syndactylism
 - (2) Congenital absence (partial or total) of external ear
 - (3) Hypospadias
 - (4) Bands (constricting)
 - (5) Thyroglossal duct cyst
 - (6) Extensive nevi, etc.

If the case reports and lists of operations are approved, the candidate will receive subsequent information regarding taking the examinations. The board at its discretion may request certification of case reports by the hospital where the operations were performed. The following form should accompany the case reports: "I hereby certify that the planning and essential surgical procedures described herein were carried out by me as an independent operator."

Every candidate's final acceptability for examination is based not only on the evaluation of his training qualifications, but on his professional ability as a plastic surgeon, his ethical standing in the community, and the strict limitation of his work to plastic surgery.

A candidate should remember that these case reports are documentary evidence of his ability and that the material in them and the manner of presentation are important evidences of his ability.

EXAMINATIONS

In instances where a candidate submits case reports that do not meet the standards of the board, he will be required to submit additional case reports or an entirely new set of 35 within a period of one year. If this second series of case reports again do not meet the standards of the board, the candidate may be required to take additional training (of length and type specified by the board) before he will be allowed to submit any further case reports.

After a candidate has been notified that he has fulfilled the preliminary requirements and that his case reports have been approved, he will be required to take the qualifying examination within a period of three years.

After approval of the case reports, and prior to the examination, the candidate will be visited at his place of practice by a member or members of the board to observe him operate and to examine a number of his pre-operative and post-operative cases.

The qualifying examinations are given twice yearly, in the spring and fall. The spring examination is given immediately preceding, during, or following the annual meeting of the American Association of Plastic Surgeons (usually in May), and the fall examination is given immediately preceding, during, or following the annual meeting of the American Society of Plastic and Reconstructive Surgery (usually in October). Candidates are required to go to the designated center for the qualifying examination, which will last three days. These centers will be the city in which the meetings of these two organizations are held if the proper clinic and hospital facilities are available, otherwise in some nearby city where such material is available. Arrangements for all examinations are made by the examination committee.

A written examination will consume all of the first day and half of the second day. An oral and practical examination will consume the afternoon of the second day and all of the third day. The subjects of the written examination are (1) theory and practice of plastic surgery, (2) applied anatomy, applied physiology, (3) pathology, bacteriology, clinical laboratory methods (pharmacology), (4) reaction of tissue to injury, surgical accidents, anesthesia. A general oral examination pertaining to plastic surgery will be given. In the practical part of the examination, the examiners will present a group of patients for examination by the candidates, and the candidates will be quizzed on methods of procedure—diagnosis, treatment, technique, and so on. Slides of preoperative conditions will be shown on a screen and the candidate asked to make a quick diagnosis of the items and to tabulate in the order of their importance the methods of treatment. Microscopic slides of the average pathological tissue falling within the province of the plastic surgeon will be given the candidates, and they will be asked to write a description and diagnosis.

GRADES

To be considered as passing, the candidate will be required to receive a grade of at least 65% in each portion of the written examination and an average grade of 75% on the entire written and oral examination.

CERTIFICATION

After a candidate has met the requirements for eligibility and passed the examinations of the board, a certificate attesting his qualifications in plastic surgery will be issued to him by the board, signed by its officers and having the seal of the board affixed thereto. It shall be the prerogative of the board to determine the fitness professionally and ethically of any candidate for its certificate, and the action or decision of the board regarding the certification of any candidate shall be final.

FEES

The fee for application and examination is \$150. Of this sum, \$25 must accompany the application and the remaining \$125 must be paid when the candidate is notified of acceptance for examination. There will be no refunds. This fee may be increased at the discretion of the board. The board is a nonprofit organization, and the fees of candidates are used solely for defraying the actual expenses of the board. The members of the board serve without remuneration. Because of the limited number of surgeons certified by this board it is necessary for a limited time to request a voluntary annual contribution of \$10 from diplomates after the first year's certification to help defray expenses.

AMERICAN BOARD OF PREVENTIVE MEDICINE

ERNEST L. STEBBINS, Chairman, Baltimore
 V. A. VAN VOLKENBURG, Vice-Chairman for Public Health,
 Albany, N. Y.
 ROBERT A. KEHOE, Vice-Chairman for Occupational Medicine,
 Cincinnati
 OTIS O. BENSON, Vice-Chairman for Aviation Medicine,
 Washington, D. C.
 GAYLORD W. ANDERSON, Minneapolis
 J. H. BAILLIE, Toronto, Canada
 RICHARD F. BOYD, San Francisco
 LEROY E. BURNEY, Washington, D. C.

A. G. KAMMER, Pittsburgh
 MATTHEW R. KINDE, Battle Creek, Mich.
 LANGDON C. NEWMAN, Washington, D. C.
 JAMES H. STERNER, Rochester, N. Y.
 JAN H. TILLISCH, Rochester, Minn.
 FELIX J. UNDERWOOD, Jackson, Miss.
 TOM F. WHAYNE, Secretary-Treasurer, University of Pennsylvania, Philadelphia 4, Pa.

ELIGIBILITY REQUIREMENTS

Except as mentioned later, each applicant for a Certificate in Public Health, Aviation Medicine or Occupational Medicine is required to meet certain eligibility requirements and to pass an examination. Such eligibility requirements are set forth in the by-laws of the Board. For the information of applicants such requirements are briefly outlined below; but for a full statement thereof reference must be made to the by-laws, as from time to time in force, by which alone such requirements are governed:

GENERAL REQUIREMENTS

1. Good moral character and high ethical and professional standing;
2. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education and Hospitals of the American Medical Association, or from a foreign school satisfactory to the Board;
3. An internship of at least one year in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association or in a foreign hospital satisfactory to the Board; and
4. Licensure to practice medicine in the United States or in the Dominion of Canada.

SPECIAL REQUIREMENTS IN PUBLIC HEALTH

1. Successful completion (after internship) of at least one academic year of graduate study leading to the degree of Master of Public Health or an equivalent degree or diploma; or training or study deemed by the Board to be substantially equivalent to such graduate study;
2. *Residency (after internship) of at least two years of field experience in general public health practice, which includes planned instruction, observation, and active participation in a comprehensive, organized, public health program, one year of which may be an approved clinical residency in a field directly related to public health;
3. A period (after internship) of not less than three years, in addition to 1 and 2 above, of special training in or teaching or practice of public health; and
4. Limitation of practice to full-time teaching or practice of public health as a specialty.

SPECIAL REQUIREMENTS IN AVIATION MEDICINE

1. Successful completion (after internship) of at least two academic years of graduate study in preventive medicine and aviation medicine, one year of which graduate study shall be in a school of public health accredited for the purpose of such graduate study by the American Public Health Association and one year of which shall be in a school of aviation medicine accredited for the purpose of such graduate study by the Council on Medical Education and Hospitals of the American Medical Association; or training and study deemed by the Board to be substantially equivalent to such graduate study.
2. *Residency (after internship) of at least one year of supervised experience in aviation medical practice, which includes planned instruction, observation, and active participation in a comprehensive, organized program of aviation medicine;
3. Supervised practice of aviation medicine (after internship) of not less than one year, in addition to 1 and 2 above, of special training in or teaching or practice of aviation medicine;

*Approval of Residency training is in the process of development. Until such time as an adequate program of Residency is developed, field training will be evaluated by the Board on an individual basis. Information as to approved residencies may be obtained from the Council on Medical Education and Hospitals or from the Secretary of the Board.

4. A period (after internship) of not less than two years, in addition to 1, 2 and 3 above, of special training, teaching, research or practice of aviation medicine;

5. Limitation of practice to full time teaching, research or practice of aviation medicine;

6. Regular and frequent participation in aerial flight.

Credit for training and experience in public health or aviation medicine while in military service will be considered on an individual basis depending on the type of service.

SPECIAL REQUIREMENTS IN OCCUPATIONAL MEDICINE

1. Successful completion (after internship) of at least two academic years of graduate study in preventive and occupational medicine in a school of medicine, or a school of public health. The schools in which such instruction is provided shall be accredited for graduate study by the Council on Medical Education and Hospitals of the American Medical Association or the American Public Health Association, in accordance with the jurisdictions of these accrediting agencies; or training and study deemed by the Board to be substantially equivalent to such graduate study.

2. Completion (after internship) of not less than one year, in addition to 1 above, of supervised experience (residency) in occupational medical practice in an industrial or medical organization. This residency shall provide planned instruction, observation and active participation in a comprehensive program of occupational medicine; or a comparable period of experience deemed by the Board to be substantially equivalent to such year of supervised experience.

3. A period (after internship) of not less than three years, in addition to 1 and 2 above, of special training in or teaching or practice of occupational medicine.

4. Limitation of practice to full time teaching, research, or practice of occupational medicine.

APPLICATIONS

Each application for examination must be made on the prescribed form (which may be obtained from the Secretary), and be accompanied by the required documentation and must be filed with the Secretary, ordinarily not less than 90 days prior to the date of examination. The application must also be accompanied by the application fee and two recent, clear, unmounted, autographed photographs of the applicant one of which should be attached to the application and the other unattached.

FEES

The fee for application and examination is \$90, payable as indicated below; additional fees are payable for re-examination, but no additional fee is payable for issuance of a Certificate.

Application fee.....\$15.00. No application will be considered unless accompanied by the application fee. The application fee is not refundable.

Examination fee.....\$75.00. This fee is payable when the applicant is notified of acceptance for examination, and, if paid prior thereto, is not refundable after such notification has been given.

No member of the Board is authorized to give informal opinions as to the eligibility of candidates. The determination of eligibility will be made only by the Board after receiving full application information. Each candidate must comply with Board regulations in effect at the time the examination is taken and also those in effect at the time the Certificate (if any) is issued, regardless of when his original application was filed. An applicant declared ineligible for admission to examination may refile or reopen his application on the basis of new or additional information within two years of the filing date of his original application without payment of an additional application fee.

Applicants who are declared eligible for examination but who fail to submit to examination within three years of the date of the filing of the application are required to file a new application and pay a new application fee.

EXAMINATIONS

Examinations will be held from time to time and in various places depending upon need as indicated by applications received. Examinations will ordinarily be held in connection with

the annual meetings of one or more of the sponsoring societies and may also be held at other times and other places so located geographically as to minimize travel for the applicants.

The examination consists of three parts:

Part 1 consists of a comprehensive written examination designed to test the knowledge of the applicant in the general field of preventive medicine. Part 2 is a comprehensive written examination designed to test the knowledge of the applicant in the special field in which he requests certification. Part 3 is an oral or practical examination which will usually be held at the completion of the written examinations. An endeavor will be made to adapt the details of the oral or practical examination to each candidate's experience and practice. The examiners will report upon each candidate to the assembled Board, by which the results of the examination will be considered.

CERTIFICATION

Upon satisfactory completion of the examination and proof to the satisfaction of the Board that the applicant is eligible for certification, a Certificate will be issued to the effect that the applicant has been found to be possessed of special knowledge in the field specified in his application. The Certificate will be signed by officers of the Board and will have its seal affixed. Each Certificate remains the property of the Board, but the person to whom it is issued is entitled to its possession unless and until it is revoked. Any Certificate issued by the Board may be revoked if evidence, satisfactory to the Board, is presented that the applicant was not eligible to receive it at the time of application or issuance, or that he misstated, misrepresented or concealed any pertinent fact, or that his license to practice medicine has been suspended or revoked, or that he has ceased to be engaged in the teaching or practice of the specialty in which he has been certified. The issuance of a Certificate to any person does not constitute such person a member of the Board.

PLEDGE

Each candidate is required to sign the following pledge.

"I hereby pledge myself to the highest ethical standards in the practice of" the specialty.

The above requirements for certification are undergoing revision at the present time. Communications regarding such revisions should be addressed to the Secretary of the American Board of Preventive Medicine.

AMERICAN BOARD OF PROCTOLOGY

- HARRY E. BACON, President, Philadelphia
- HYRUM R. REICHMAN, President Elect, Salt Lake City
- A. W. MARTIN MARINO, Vice President, Brooklyn, N. Y.
- GARNET W. AULT, Washington, D. C.
- FREDERICK B. CAMPBELL, Kansas City, Mo.
- WALTER A. FANSLER, Minneapolis
- LOUIS E. MOON, Omaha
- ROBERT J. ROWE, Dallas, Texas
- R. A. SCARBOROUGH, San Francisco
- STUART T. ROSS, Secretary, 520 Franklin Ave., Garden City, N. Y.

QUALIFICATIONS AND REQUIREMENTS

General

All candidates shall comply with the following regulations:

1. A candidate shall possess moral, ethical and professional qualifications acceptable to the Board.
2. He shall possess full citizenship in the country where he practices.
3. He shall limit his practice to proctology, shall appear personally before the Board and shall submit to the required examinations.
4. He shall deliver to the Board upon request an official record of patients hospitalized by him during the year prior to the date of submission of the application.
5. He shall submit a bibliography of papers and books published by him.

Professional Qualifications

1. He shall be a graduate of a medical school approved by the Council on Medical Education and Hospitals of the American Medical Association.
2. He shall possess a license to practice medicine in the country of his residence.
3. He shall have completed an internship, preferably of the general rotating type, of not less than 12 months in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association.

Special Professional Qualifications

He shall have completed:

1. Two years of approved general surgical residency and two years of approved proctologic residency; or
2. Three years of approved general surgical residency and one year of approved proctologic residency by special arrangement with the Board; or
3. Three years of approved general surgical residency and two years of approved proctologic precepteeship by special arrangement with the Board; or
4. Two years of approved general surgical residency and three years of approved proctologic precepteeship.

APPLICATIONS

Each candidate for examination shall submit an application prepared upon the prescribed form which may be obtained from the Secretary of the Board. It shall contain a record of the candidate's premedical and medical training, internships, residencies, precepteeships, other post-graduate study, hospital and dispensary appointments, teaching positions, service in the Armed Forces, service in federal, state or local government, membership in medical societies and any additional information considered valuable by the Board.

The application shall be signed by two proctologists. It shall be accompanied by two unmounted autographed recent photographs of the candidate, letters of endorsement from appropriate sources and the application fee. It shall be filed with the Secretary not less than 90 days prior to the date of examination.

EXAMINATIONS

Examinations are conducted at times and places determined by the Board and are announced in THE JOURNAL of the American Medical Association.

Seventy-five per cent is the passing grade on all examinations.

Examination papers are identified only by numbers and the examiners do not know the identity of the examinees.

Part I: This consists of a comprehensive written examination in the basic sciences, including anatomy, physiology, pathology, bacteriology and biochemistry. The examination is held in the fall of the year simultaneously in several cities of the United States.

Upon approval of the American Board of Proctology, candidates who have passed Part I examinations of the American Board of Surgery and who have completed required training in proctology may not be required to take Part I of the examinations of the American Board of Proctology.

Part II: This is a practical examination which is held in the community in which the candidate conducts his professional activities. (It may be omitted at the discretion of the Board, in which case the candidate will be notified by the Secretary.) It is endeavored to arrange the examination at a time suitable to both the candidate and the examiner. The examination includes inspection of:

1. Surgical operations.
2. Hospital rounds.
3. Hospital and office records.
4. Office practice.

Part III: This consists of comprehensive written and oral examinations on the theory and practice of proctology, and includes roentgenologic interpretation. The examination is usually held in the fall of the year in one designated city of the United States. The candidate is not admitted to Part III examinations until he has completed the requirements of Part II.

The oral portion of the examination is conducted by members of the Board or its designated examiners. An attempt is made to ascertain the candidate's knowledge of current proctologic literature, his knowledge of the basic sciences, and the extent of his clinical experience and other qualifications.

FEES

Application fee: A fee of \$25.00 shall accompany the application.

Examination fee: A fee of \$150.00 is due and payable when the candidate is notified that he has been approved for examination.

No fee shall be returned to the candidate without Board approval.

All fees shall be made payable to The American Board of Proctology and shall be sent to the Secretary.

AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY

GEORGE N. RAINES, President, Washington, D. C.

PAUL I. YAKOVLEV, Vice-President, Boston

HARVEY BARTLE JR., Philadelphia

C. H. HARDIN BRANCH, Salt Lake City

HENRY W. BROSIN, Pittsburgh

RUSSELL N. DEJONG, Ann Arbor, Mich.

L. M. EATON, Rochester, Minn.

KNOX H. FINLEY, San Francisco

FRANCIS M. FORSTER, Washington, D. C.

FRANCIS J. GERTY, Chicago

WILLIAM MALAMUD, Boston

DAVID A. BOYD JR., Secretary-Treasurer

102-110 Second Ave. S. W., Rochester, Minn.

APPLICATION

An application, in order to be considered at any meeting of the Board, must be in the hands of the Secretary of the Board not less than 90 days before the date of such meeting. A proper application form may be obtained from the Secretary. Application may be made for certification in psychiatry or in neurology or in both fields. Applications will be formally considered only when made on the official application blank in such form as may be adopted from time to time by the Board and when accompanied by an application fee in such amount as may be fixed by the Board.

The Secretary of the Board, upon receipt of an application, shall forthwith make inquiries from those to whom the candidate refers and from such other persons as the Secretary may deem desirable and shall verify the candidate's record from the biographical records of the American Medical Association, after which he shall forward the application to the Committee on Credentials. This Committee shall consider the application and other information available and notify the Secretary whether the application is accepted. The certification of a candidate in either psychiatry or neurology, or both, shall be approved by a majority of the members of the entire Board at any meeting held for such certification.

FORM OF CERTIFICATION

There shall be separate certification in psychiatry and in neurology and two certifications or a combined certification for those qualified in both fields. The certifications shall be in such form as is approved by the Board of Directors.

GENERAL REQUIREMENTS

Each application for a certificate must establish that:

(a) He is a physician duly licensed by law to practice medicine.

(b) He is of acceptable ethical and professional standing.

(c) He is now a member of the American Medical Association. Exceptions to the foregoing may be made at the discretion of the Board for good and sufficient reasons.

(d) He has satisfactorily completed adequate training in psychiatry or neurology, or both, as a specialty.

CLASSES OF APPLICANTS

Class A

Applicants who graduated from an approved medical school before the foundation of the Board (1934) will not be held to the strict interpretation of the published requirements in formal graduate training. Under such circumstances the Board will consider the training and experience of the applicant and decide whether or not he will be admitted to the examinations. After January 1, 1954, for such graduates the Board will consider ten years of full-time acceptable experience in psychiatry or neurology in lieu of the formal training requirements. Should the candidate then apply for supplementary certification, the Credentials Committee will require five years of additional acceptable experience in the supplementary field.

Class B

Applicants who graduated from an approved medical school after 1934 shall fulfill the following special requirements.

PROFESSIONAL EDUCATION

1. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education and Hospitals of the American Medical Association. In the case of an applicant whose medical training has been received outside the United States and Canada, such training must be satisfactory to the aforementioned Council.

2. Satisfactory completion of a year's internship approved by the same Council in General Medicine, General Surgery, Pediatrics or a rotating service.

3. The nine-month wartime internship will be accepted as an equivalent of one year.

SPECIALIZED TRAINING

Admission to the examination for certification in psychiatry or in neurology requires a total of five calendar years of training and experience, three years of which must be specialized training satisfactorily completed in approved training centers, plus two years of experience. Admission to the examination for certification in both psychiatry and neurology requires a total of six calendar years of training and experience, five years of which must be specialized training satisfactorily completed in approved training centers, plus one year of experience. The specialized training may be subdivided into two and one-half years each in psychiatry and neurology or three years in one subject and two years in the other. The required years of experience should be spent in clinical practice with major responsibility for the care of patients.

All applicants who wish to qualify for examination for certification in psychiatry or neurology under the regulations relating to training credit and who began training on or after July 1, 1956, must show that at least 24 months of their residency training have been secured in residency training programs approved for at least two years of residency training in the specialty in which they seek certification.

The training for psychiatrists should include clinical work with psychoneurotic and psychotic patients, combined with the study of basic psychiatric sciences, medical and social psychology, psychopathology, psychotherapy, and the physiological therapies, including a basic knowledge of the form, function and pertinent pathology of the nervous system. The training should be supervised and guided by teachers competent to develop skill and understanding in the utilization of such basic knowledge in dealing with patients. Mere factual knowledge is not sufficient. This training period should include instruction in the psychiatric aspects of general medical and surgical conditions and the behavior disorders of children and adolescents sufficient to develop practical ability to direct the treatment of such conditions. It should also include collaborative work with social workers, clinical psychologists, courts, and other social agencies. The training program of the candidate for certification in psychiatry should include sufficient training in neurology to enable him to recognize and to evaluate the evidences of organic neurological disease.

The training for neurologists should be based on clinical work with adults and children with neurological disorders, including the neurological complications of medical and surgical conditions. This should be combined with study of the basic

neurological sciences, neuroanatomy, neurophysiology, neuropathology, and neurooentgenology. This training should be supervised and guided by teachers competent to develop skill and understanding in the utilization of such basic knowledge in dealing with patients. Mere factual knowledge is not sufficient. This training should include sufficient training in psychiatry to enable the candidate to recognize and evaluate the common psychiatric reactions.

The Board offers the foregoing two paragraphs as an outline of desirable training. If, however, the candidate has evidence of equivalent qualifications of training and experience not in the pattern here formulated, this evidence with appropriate documentary support may be included in his application for evaluation and possible approval by the Board.

Candidates seeking certification in both neurology and psychiatry, or supplementary certification in one after being certified in the other, must submit evidence satisfactory to the Board of an additional two years of full-time basic training in the supplementary specialty.

Thus, no candidate is eligible for examination by the Board until he has completed at least five years of special training and experience in neurology or in psychiatry for a single certificate, or at least six years of special training and experience in neurology and psychiatry for certification in both neurology and psychiatry.

The Board will give not more than six months of credit for not less than six months of training in an approved training center for Internal Medicine or Pediatrics in lieu of six months of experience to candidates for the certificate in psychiatry or neurology, but not to candidates for certification in both psychiatry and neurology.

The Board will give credit for one year of training in Child Psychiatry providing it is the third year of the required three years of special training required by the Board and providing it is taken in a center approved by this Board for training in Child Psychiatry. After July 1, 1956, training credit for work in the field of Child Psychiatry may be gained only by participation in a hospital residency training program that is regularly approved. After that date, all independent training approval of psychiatric clinics for children is discontinued.

TRAINING IN THE ARMED FORCES

Training and experience credit toward requirements for examination will be granted for military duty in the Korean emergency under certain conditions. This policy relates to active military medical duty since July 1, 1950. One year of training credit will be granted for one year spent in full-time psychiatric and/or neurological duties. Additional training credit will be granted for that amount of time spent in approved training programs. Experience credit will be granted for any remaining time spent in full-time psychiatric and/or neurological assignments. Double credit will not be granted for any single period of time.

For military duty after January 1, 1954, only experience credit will be granted for full-time psychiatric and/or neurologic duties. Training credit will be granted for residency assignments in regularly approved training program.

EXAMINATIONS

Dates and places of examinations shall be set by the Board at its discretion and shall be announced in THE JOURNAL of the American Medical Association, in the American Journal of Psychiatry, in *Journal of Nervous and Mental Diseases*, and in the A. M. A. *Archives of Neurology and Psychiatry*.

Though the purpose of the examination is to test the competence of the candidate in psychiatry or neurology or both, it must not be forgotten that both these medical disciplines constitute part of the broad field of general medicine. The Board requires some proficiency in neurology on the part of those it certifies in psychiatry and vice versa, but examines the candidate in accordance with the certificate he seeks. The examinations will be of such type that no adequately trained person will fail, and yet they will be sufficiently searching so that the specialist in fact may be separated from the specialist in name. The practical examination will include the examination of patients under the supervision of the examiner. The manner of examining patients, and the reasoning and deductions therefrom,

will constitute an important part of the examination. Oral and practical examinations will be given in the basic sciences with special regard to their clinical implications. Written examinations may be given at the discretion of the Board. The examination for certification in psychiatry will differ from the examination for certification in neurology.

FEEs

The candidate upon filing his application shall accompany it with an application fee of \$50.00, which is not returnable. If a preliminary written examination has been decreed, an additional \$25.00 fee will be required at the time of the applicant's acceptance. When notified by the Secretary that he is accepted for the oral and practical examination, the candidate shall send to the Secretary an examination fee of \$75.00. A candidate who has been certified in either psychiatry or neurology and who has been admitted to supplementary examination for the other certificate shall pay an additional examination fee of \$75.00.

Any candidate who finds himself unable to attend an examination to which he has been admitted and does not notify the Secretary at least three (3) months before the date of the examination will forfeit his examination fee. Any candidate who fails to appear for examination within a period of three (3) years following the date of notification of eligibility for examination shall be required to submit a new application and pay the attendant fee. If a candidate dies before his certificate is issued, all fees will be returned to his estate.

AMERICAN BOARD OF RADIOLOGY

DONALD S. CHILDS, President, Syracuse, N. Y.
 B. P. WIDMANN, Vice-President, Philadelphia
 JAMES W. J. CARPENDER, Treasurer, Chicago
 ROBERT P. BARDEN, Philadelphia
 JOHN D. CAMP, Los Angeles
 E. L. JENKINSON, Chicago
 TRAIAN LEUCUTIA, Detroit, Mich.
 F. W. O'BRIEN, Boston
 DOUGLAS QUICK, New York
 LEO G. RIGLER, Minneapolis
 LAURENCE L. ROBBINS, Boston
 ERNEST H. WOOD, Chapel Hill, N. C.
 H. DABNEY KERR, Secretary, Kahler Hotel Building, Rochester, Minn.

CERTIFICATES

A certificate granted by this board does not of itself confer, or purport to confer, any degree, or legal qualifications, privileges, or license to practice radiology. Certificates of the board shall be issued in one of three categories:

1. *Radiology*: that branch of medicine which deals with the diagnostic and therapeutic application of radiant energy including roentgen rays, radium and radioisotopes.
2. *Diagnostic Roentgenology*: that branch of radiology which deals with the diagnostic application of roentgen rays.
3. *Therapeutic Radiology*: that branch of radiology which deals with the therapeutic application of roentgen rays, radium and radioactive isotopes.
4. *Radiological Physics*: that branch of physics which deals with the medical application of roentgen rays, gamma rays, radioisotopes, nuclear reactions, and particle accelerators.
5. *Roentgen-ray and Gamma-ray Physics*: that branch of radiological physics which deals with roentgen rays and gamma rays.
6. *Medical Nuclear Physics*: that branch of radiological physics which deals with radioisotopes, nuclear reactions and particle accelerators.

GENERAL REQUIREMENTS AND QUALIFICATIONS

Each applicant shall be required to present evidence that he has met the following standards:

1. Satisfactory moral and ethical standing in the profession.
2. A license to practice medicine in the state or county in which he resides.
3. Holds himself out to be a specialist in radiology or one of its branches as defined and devotes his time to the practice of radiology or one of its branches.

4. He is a citizen of the United States or Canada. A candidate from another country must be a permanent resident of that country and a citizen thereof.

PROFESSIONAL EDUCATION

1. Graduation from a medical school recognized by the Council on Medical Education and Hospitals of the American Medical Association.

2. Completion of an internship of not less than one year in a hospital approved by the same Council. After completion of the internship, there shall be a period of special training (length of time as indicated below) in an approved Department of Radiology.

Radiology: Those beginning their training before July 1, 1956, must have three years' formal residency training in an approved Department of Radiology.

Those beginning their training on July 1, 1956, or thereafter must have three years' formal residency training in an approved Department of Radiology plus an additional year of either further training or practice. The three year training period must include the equivalent of six months (total) in Pathology and Isotopes.

Those beginning their training on July 1, 1956, or thereafter will be required to take a written examination in Physics (including Physics of Isotopes) and Pathology at the completion of their formal training. Acceptance for the oral examination is contingent upon passing the written examination. (The written examination in the above two mentioned phases of Radiology will abolish the oral).

Diagnostic Roentgenology: Those beginning their training before July 1, 1956, must have two and one-half years' formal residency training in an approved Department of Radiology. The equivalent of six months of this time must have been devoted to Pathology.

Those beginning their training on July 1, 1956, must have two and one-half years' formal residency training in an approved Department of Radiology (the equivalent of six months of which time must have been devoted to Pathology) plus an additional year of either further training or practice.

Those beginning their training on July 1, 1956, or thereafter will be required to take a written examination in physics and pathology at the completion of their formal training. Acceptance for the oral examination is contingent upon passing the written examination. (The written examination in the above two mentioned phases of Radiology will abolish the oral).

Those beginning their training on July 1, 1957, or thereafter will be required to take three years' formal residency training in an approved Department of Radiology—the first year of which must be spent in basic training (Pathology, Physics and Basic Radiological Techniques) followed by two years' clinical training. They will also be required to take an additional year of either further training or practice. (Written examination also required for these candidates. See above paragraph).

Therapeutic Radiology: Those beginning their training before July 1, 1956, must have two and one-half years' formal residency training in an approved Department of Radiology. The equivalent of six months of this time must have been devoted to Pathology.

Those beginning their training on July 1, 1956, must have two and one-half years' formal residency training in an approved Department of Radiology (the equivalent of six months of which time must have been devoted to Pathology) plus an additional year of either further training or practice.

Those beginning their training on July 1, 1956, or thereafter will be required to take a written examination in Physics (including Physics of Isotopes) and Pathology at the completion of their formal training. Acceptance for the oral examination is contingent upon passing the written examination. (The written examination in the above two mentioned phases of Radiology will abolish the oral). Those beginning their training on July 1, 1957 or thereafter will be required to take three years' formal residency training in an approved Department of Radiology—the first year of which must be spent in basic training (Pathology, Physics, Physics of Isotopes and Basic Radiologic Techniques) followed by two years' clinical training. They will also be required to take an additional year of either further training or practice. (Written examination also required for these candidates.)

Those applying for Therapeutic Radiology alone must show evidence of personal experience in the use of intracavitary and interstitial radium or equivalent sources, as well as proficiency in Roentgen Therapy.

Prior to July 1, 1960, those candidates desiring to be certified in either Radiology or Therapeutic Radiology, will be urged to take an examination in Nuclear Medicine.

Those candidates previously certified in Roentgenology desiring to complete their certificate in Radiology (including Nuclear Medicine) will be required to have the equivalent of six months' full-time radium and isotope training in an approved Department of Radiology.

Prior to July 1, 1960, those candidates who have been previously certified in Roentgenology and who *do not* desire to be examined in Nuclear Medicine must have the equivalent of three months' full time radium training in an approved Department of Radiology.

EXAMINATIONS

Usually two examinations are held each year. At present, examinations are practical and oral, although written examinations are to be added as noted above. The examinations are designed to test the candidate's fitness to practice radiology or one of its branches as a specialty.

The examination consists of tests in film interpretation and an oral examination in pathology, physiology, radiophysics, and radiobiology, as well as the clinical application of roentgen rays, radium, and radioactive isotopes. The applicant is also examined in "professional adaptability," in an attempt to ascertain his attitude toward his fellow practitioners and his patients.

AMERICAN BOARD OF SURGERY

GUSTAF E. LINDSKOG, Chairman, New Haven, Conn.
 FRANK GLENN, Vice-Chairman, New York
 CLETUS W. SCHWEGMAN, Associate Secretary, Philadelphia
 JOHN J. MCKEOWN Jr., Assistant Secretary, Philadelphia
 WILLIAM A. ALTEMEIER, Cincinnati
 JOEL W. BAKER, Seattle
 HOWARD H. BRADSHAW, Winston-Salem, N. C.
 OLIVER COPE, Boston
 MICHAEL E. DE BAKEY, Houston, Texas
 J. ENGLEBERT DUNPHY, Boston
 WILLIAM K. LIVINGSTON, Portland, Ore.
 WILLIAM P. LONGMIRE Jr., Los Angeles
 WALTER G. MADDOCK, Chicago
 CARLETON MATHEWSON Jr., San Francisco
 H. WILLIAM SCOTT Jr., Nashville, Tenn.
 HARRIS B. SHUMACHER Jr., Indianapolis
 WILLIAM H. SNYDER Jr., Los Angeles
 ROBERT M. ZOLLINGER, Columbus, Ohio
 JOHN B. FLICK, Secretary-Treasurer, 225 S. 15th St., Philadelphia, Pa.

GENERAL QUALIFICATIONS

An ethical standing in the profession and a moral status in the community which are satisfactory to the Board.

Engagement in the practice of surgery.

PRELIMINARY TRAINING

Graduation from an approved medical school in the United States or Canada or from medical schools acceptable to the Board in other countries.

Completion of an internship (straight or rotating) of not less than one year in a hospital approved by the Council on Medical Education and Hospitals of the American Medical Association or its equivalent in the opinion of the Board.

SPECIAL TRAINING

The American Board of Surgery is guided by the evaluation of residency training programs made by the Conference Committee on Graduate Training in Surgery and does not itself conduct such surveys.

The Board interprets the term "general surgery" in a comprehensive manner and expects candidates to have knowledge of the basic principles applied in the treatment of fractures, head injuries, or other forms of trauma, and of the more common procedures in plastic, gynecologic, orthopedic, neurologic, thoracic and urologic surgery.

BASIC SCIENCES

It is fundamental to the concept of an approved residency in general surgery that the program provide for properly organized, integrated, and progressively graded clinical training in this specialty. This presupposes a continuity of clinical experience under the supervision of the surgical staff of the hospital or hospitals in which such training is conducted. Accordingly, while recognizing the value of formal courses in the study of surgery and the basic sciences at approved graduate schools of medicine, the Board will not accept these courses as part of a three or four-year residency program in lieu of clinical experience. Furthermore, the integration of basic sciences, particularly pathology, with clinical training is considered superior to formal courses in these subjects.

SENIOR YEAR

The most important single factor in the development of a surgeon is the opportunity under guidance and supervision to grow by progressive and succeeding stages to the stature of complete responsibility for the surgical care of patients. Major operative experience and senior responsibility are essential parts of surgical education and training. For this reason the Board cannot accept for examination candidates who have not had such experience in general surgery, regardless of the number of years in training.

Since a majority of residency training programs do not provide a sufficient accretion of operative experience and personal responsibility until the completion of the senior or final year, the Board requires that the candidate have had this senior year in order to become eligible for examination. Because it is recognized that some flexibility and well-considered experimentation are essential to progress in surgical, as well as other forms of education, the Examination Committee of the Board is prepared to give individual consideration to applicants whose training in general appears adequate although it may not meet all of the following specified requirements.

Requirements for examination are subject to change and in each case are as published in the Board's most recent Booklet of Information at the time application is submitted.

TYPES OF PROGRAMS

The requirements for examination may be fulfilled by either of two programs. These are considered to be minimal in attaining the purposes of the Board and do not preclude additional desirable educational experiences which may strengthen the individual residency training program.

The Board may, at its discretion, require that a member of the Board, or other designated diplomate, observe and report upon the clinical performance of the candidate before considering his eligibility for examination or certification.

The Board reserves the right to require a candidate to submit a list of the operative procedures performed by him during his training period.

Group I Program

Completion of a graded residency in general surgery of at least four years' duration, including the senior year, in an institution or institutions acceptable to the Board and approved for four years of training by the Conference Committee on Graduate Training in Surgery is required.

An approved four-year residency may include a research project or an assignment to a basic science department such as pathology, physiology, or anatomy, provided this is an integral part of the program.

The Board accepts training of not more than one year's duration in "affiliate hospitals" as part of its basic formal educational requirements. Such "affiliate hospital" training must have been part of the graded residency program of an institution approved for four years by the Conference Committee. The senior year must have been spent in the parent institution holding the approval of the conference Committee, except in those instances where the senior year in the "affiliate hospital" is, in the opinion of the Examination Committee of the Board, equivalent in training value to the senior year in the parent institution and is under the same supervision.

The candidate who completes only four years of an approved program designed for more than four years, and thus does not have the senior or final year of the residency, may submit his

qualifications for special consideration by the Examination Committee. The Committee can recommend acceptance of the candidate for examination in Group I or Group II, provided the evidence indicates the candidate has had adequate operative experience and clinical responsibility as certified by the Chief of Service.

Residency credit will be granted for surgical internship to a candidate who has completed a prior year of acceptable internship when the surgical internship is part of a graded program approved for four years by the Conference Committee.

Group II Program

Completion of a graded residency in general surgery of at least three years' duration, including the senior year, in an institution or institutions acceptable to the Board and approved for at least three years of training by the Conference Committee on Graduate Training in Surgery is the basic requirement.

Residency credit will not be granted for separate periods of time devoted exclusively to research or a preclinical discipline although the day to day integration of these disciplines with clinical surgery is highly desirable. The program must have included three years of clinical surgery and the final year must have been spent in the capacity of senior or chief resident in general surgery.

Two additional years of training beyond the three years of residency to complete a total of five are necessary to meet the requirements for examination. These may include:

(a) Practice of surgery under acceptable supervision (preceptorship). By "acceptable supervision" is meant an arrangement with a preceptor acceptable to the Board who should inform the Board in writing of his willingness to assume responsibility for the candidate's further training. Before the candidate's eligibility for examination can be considered, he will be required to submit to the Board a list of the operative procedures performed by him during the period of supervised practice, and the preceptor will be requested to vouch for the candidate's integrity, surgical judgment, and technical skill. The acceptance of supervised practice in fulfillment of part of the Board's requirements will be contingent upon the candidate's having had adequate clinical opportunities to fortify residency training and considerable responsibility in the care of patients, including the performance of major operative procedures under supervision.

(b) The study of surgery and the basic sciences in an approved graduate school of medicine on a full-time basis and for a consecutive period of not less than nine months, or one school year. Training credit in excess of twelve months will not be granted in this category.

If provision has been made to study a single basic science such as pathology, physiology, or anatomy, up to six months' credit may be granted for such study.

Credit may be granted for a maximum of twelve months spent in full time surgical research under a responsible investigator who is acceptable to the Board. A candidate may not claim credit for both graduate study and research years.

(c) Further acceptable surgical residency or fellowship training, either in general surgery or in a recognized surgical specialty.

Credit as outlined above under (a), (b), and (c) will be applicable only toward the two years of training which Group II candidates must complete in addition to three years of approved residency in general surgery. It will not be considered as residency credit.

MILITARY CREDIT

Credit not to exceed one year may be granted to those candidates who have served in military hospitals other than those approved for residency training, provided that the candidate has had a satisfactory surgical assignment with adequate and diversified clinical material and provided further that his work in surgery is carried out under the supervision of a surgeon acceptable to the Board. Any such credit will be considered preceptorship credit toward Group II requirements and not basic residency credit.

LICENSE TO PRACTICE

The Board requires, prior to issuance of a certificate that candidates have a valid license to practice in the nation or permanent residence except in those situations in the United States or Canada in which a license to practice is not required, such as the practice of surgery by commissioned officers in the Army, Navy or Public Health Services of these countries.

REQUIREMENTS FOR FOREIGN BORN AND FOREIGN TRAINED CANDIDATES

Such candidates must meet the same requirements as citizens of the United States or Canada. The Examination Committee may, however, in individual instances, grant credit for foreign training.

APPLICATIONS

Prospective candidates for examination by the Board should carefully read the Board's requirements. If, after becoming familiar with the requirements, a candidate needs advice about his training, or believes he has completed the requirements, he should submit a brief chronological outline of his training, including precise dates, using the Evaluation Form which will be furnished on request.

Application for Examination forms are not forwarded until candidates are within several months of completing their training and appear to have met all other requirements of the Board.

Applications should be returned to the Board's office by December 1 for candidates desiring admission to the Part I examination in March, or by July 1 for admission to the Part I examination in October.

The Board's acceptance of candidates for examination is based not only upon an evaluation of their training, but also upon information available to the Board concerning their professional ability as surgeons and their ethical standing.

Candidates are notified of their eligibility for the Part I examination as soon as their applications have been approved, and are sent a list of examination centers from which to choose. Candidates are not eligible for the Part II examination until they have made a passing grade in Part I.

EXAMINATION

The qualifying examination is divided into Part I (written) and Part II (oral). In both of these a knowledge of the practical application of the sciences fundamental to surgery is required.

Part I

The examination is given simultaneously in as many centers throughout the United States as the Board may determine suitable for the purpose and in certain military centers abroad. It will be held on the last Wednesday of October, 1957, March, 1958, and October, 1958. Thereafter the Part I examination will be held only once a year in the late Fall, at a time to be announced.

The Part I examination is of the objective, multiple-choice type, and is administered during a half-day session. This examination is designed to cover general surgical problems including the application of the basic sciences of surgery to these problems. Questions are of various types, and are based upon the analysis of case histories, cause and effect relationships, and other pertinent situations. The examinations are composed by members of the Board with the technical assistance of the Educational Testing Service.

Part II

Examinations are held in ten different centers in the United States each year from September to June inclusive. These are conducted by members of the Board and selected diplomates acting as guest examiners.

The Part II examination is oral and practical and requires the candidate's presence for one day. Candidates are examined in clinical surgery, including diagnosis, management of patients, and the application of anatomy, pathology, physiology, biochemistry, and bacteriology to surgical problems. In pathology, emphasis is placed on an understanding of disease processes and their clinical implications, as well as on the recognition of gross and microscopic lesions. The interpretation of roentgenograms also may be included.

The examination in basic sciences is integrated with clinical surgery and is not given separately.

FEE

The fee for examination is \$175 payable as follows: \$25 for registration, \$75 for Part I and \$75 for Part II.

The Board is a nonprofit organization. All fees will be used, after a reasonable amount is set aside for necessary expenses, to aid in improving existing opportunities for the training of surgeons. The members of the Board, except the Secretary-Treasurer, serve without remuneration.

CERTIFICATION IN THORACIC SURGERY

Diplomates of the American Board of Surgery wishing to become certified in thoracic surgery are advised to communicate with the Secretary of the Board of Thoracic Surgery, William M. Tuttle, 1151 Taylor Ave., Detroit 2, Mich. This Board is an affiliate of the American Board of Surgery.

BOARD OF THORACIC SURGERY

(An affiliate of the American Board of Surgery)

WILLIAM E. ADAMS, Chairman, Chicago
 JOHN C. JONES, Vice Chairman, Los Angeles
 O. THERON CLAGETT, Rochester, Minn.
 JOSEPH W. GALE, Madison, Wis.
 JULIAN JOHNSON, Philadelphia
 EDWARD M. KENT, Pittsburgh
 PAUL C. SAMSON, Oakland, Calif.
 ROBERT H. WYLIE, New York
 WM. M. TUTTLE, Secretary-Treasurer
 1151 Taylor Ave., Detroit 2, Mich.

For current requirements for certification, communications should be addressed to the Secretary of the Board of Thoracic Surgery.

AMERICAN BOARD OF UROLOGY

EDGAR BURNS, President, New Orleans
 GRAYSON CARROLL, Vice-President, St. Louis
 THOMAS D. MOORE, Memphis, Tenn.
 RUBIN H. FLOCKS, Iowa City
 DONALD A. CHARNOCK, Los Angeles
 WILLIAM P. HERBST, Washington, D. C.
 FRANK C. HAMM, Brooklyn, N. Y.
 WYLAND F. LEADBETTER, Boston
 WILLIAM NILES WISHARD Jr., Secretary-Treasurer, Indianapolis
 Mrs. RUBY L. GRIGGS, Executive Secretary, 30 Westwood Rd., Minneapolis 26, Minn.

REQUIREMENTS

A. Application for certification must be made on a special form. This will be provided by the secretary and must be returned to him accompanied by other required data and credentials and by \$50 of the examination fee.

B. The applicant must have graduated from a medical school of the United States or Canada recognized by the Council on Medical Education and Hospitals of the American Medical Association and must have completed an internship of not less than one year in a hospital approved by the same council.

Requirements of graduates of foreign medical schools shall conform to and be similar to the requirements as demanded of the applicants for the accepted medical schools in the United States and Canada. Such applications will be considered by the full board on individual merits.

C. The applicant must establish in a manner satisfactory to this Board that he is a physician duly licensed by law to practice medicine and that he is of high ethical and professional standing.

D. The applicant must establish that he has received special graduate training as follows in this order:

1. An approved internship of at least one year.

2. One year in the basic sciences or clinical studies basic to Urology; or one year residency in general surgery or internal medicine.

3. An approved graduated three-year residency in Urology, leading to competency in all its phases.

E. Applicant must have an additional period of not less than two years in the practice of Urology in the city of his office or place of practice.

F. The applicant must assure the Board that he is engaged in the full time practice of Urology.

FEE

The examination fee is \$150. Fifty dollars must accompany the application. One hundred dollars must be paid when the application has been processed. Neither fee is returnable.

Applications for certification shall be examined by the credentials committee and reviewed by the board. When additional data are required to complete the application, these will be requested by the secretary.

REQUIREMENTS FOR CERTIFICATION

The requirements for certification include: evidence of hospital practice including the presentation of report of 25 representative (not necessarily consecutive) major urologic cases from practice, which must contain all items essential for diagnosis, therapy, prognosis, results of treatment, etc.; a written examination; pathology and oral clinical examinations.

A. Evidences of Hospital Practice and Case Reports:

An index, in consecutive order, of all major and minor urologic surgery (including endoscopy) done during the last two years of practice must be presented. This index must be verified by the various hospital administrators.

The candidate must present 25 records of major urologic cases completed since the candidate's residency training with hospitals, names, (or initials) and record numbers in which the candidate has had complete charge, responsibility and activity in all phases of the patient's care. These reports must be typewritten on 8½ by 11 paper and in duplicate, but need not be on any special form. Please file the duplicate in your own office. This second copy will be called for when and if it is needed.

Complete index lists must accompany the reports. If they are obtained from more than one hospital a separate index list of each group should be provided. These lists must state the operator's name at the head of each page, the name (or initials) of the patient, the hospital number, and the name and date of operation. Statements from the administrators of the hospitals attesting that the candidate was the operator must be included.

The applicant must personally prepare the case reports, remembering that they are documentary evidence of his ability and that the material in them and the manner of presentation are important evidences of his competence as an urologist.

The case reports must be received on or before September 1.

B. Written Examination: The written examination is designed to test the candidate's preparation in and his knowledge of the whole field of urology, including the subjects: clinical urology, pathology, anatomy, physiology, embryology, bacteriology, physiological chemistry, and endocrinology. These may be held on certain dates simultaneously in different parts of the country at places convenient for candidates.

C. Pathology: The examination in pathology will consist of the identification of gross specimens and of sections of tissue observed through the microscope. It will be held at the time of the oral examination.

D. Oral-Clinical Examination: This will consist of discussions of urologic problems. The subjects forming the basis of this examination are urography; diseases of the genital organs, including the prostate and each portion of the urinary tract and the adrenals. It will ascertain the candidate's familiarity with recent literature, the breadth of his clinical experience, and his general qualifications for practice of urology.

The professional adaptability of each candidate will be investigated in an attempt to determine his ethical conduct and his attitude toward his patients and fellow practitioners.

INFLATION AND MEDICAL CARE

SINCE medical care and those who deliver it are integral parts of the American economy, it is well to take stock of the position of medical care in the current inflationary spiral. This period of inflation started in 1940 and continued through and after World War II, through the Korean war, and down to the present time with only minor interruptions. Five historical comparisons reveal the relative degree of inflation in the medical care sector: (1) commodity versus service price indexes, (2) medical care indexes versus the entire Consumer Price Index, (3) changes in the absolute and relative amounts of personal consumption expenditures for medical care, (4) changes in the percentages of one week's wages required to purchase a fixed amount of medical care, and (5) comparisons of the rate of increase in the average level of incomes of physicians with those for all gainfully employed persons.

During World War II the national debt increased from about 50 billion to 280 billion dollars in the form of government bonds; from the standpoint of their inflationary effects, these bonds may be regarded as greenbacks bearing interest. As has been true in earlier war cycles, prices of commodities and services were higher after World War II than they were during the war. Moreover, in a long inflationary period there is always a tendency for

the prices of commodities to rise first and the prices of services to lag behind and rise later. It would be expected then that medical care prices in this long period would rise more slowly at first and more rapidly later. This is precisely what has happened.

Service Prices Still Lag.—Consumer price indexes of the United States Bureau of Labor Statistics covering all the commodity prices which are included in the sample stood at 208.2, or 108% above the 1935-1939 level in 1956; on the basis of the 1947-1949 level, the index was 109.8. The important point to observe, however, is that this 1956 index for all commodities (excluding services) on the basis of the long period was 208 as compared with only 194 for the entire (including services) Consumer Price Index; but on the basis of what has happened since 1949, this index for 1956 was a seemingly modest 109.8 as compared with the Consumer Price Index of 116.2. On the other hand, the index for all services (excluding commodities) on the basis of what has happened since 1940 was 185.2 in 1956, or less than the Consumer Price Index of 194.3. But on the basis of what has happened since 1949 only, the short-run period, the index for all services was 135.1, or definitely higher than the Consumer Price Index on this short-run basis. One can conclude, therefore, that on the basis of the entire inflationary period commodity prices have risen a good deal more than service prices, 208 over 185; the latter are still in the "catching up" stage.

This lag in service prices, and in medical care prices in particular, is stressed in an article by Elizabeth A. Langford¹ of the U. S. Bureau of Labor Statistics in the current (September) issue of the *Monthly Labor Review*, the official publication of the U. S. Department of Labor. In a summary of the changes in the two decades she states (page 1053):

Medical care prices followed about the same pattern as those for all services. Thus, at the end of 1956, the prices of services, including medical care, had almost regained the relationship they held with the prices of commodities in the midthirties. Since the Consumer Price Index measures price changes relative to 1947-49, the base period, the fact that medical care prices had advanced relatively slowly during the previous decade is likely to be ignored. Moreover, comparison of the medical care index with the all-items index or with the indexes for the major groups conceals the fact that the movement of medical care prices has been similar to that for other services combined.

Her phrase "had almost regained," a general observation, is stated in terms of 1956 index numbers in the paragraph above—208 for commodities versus 194 for all items, and 185 for services versus 194.

1. Langford, E. A.: Medical Care in the Consumer Price Index, 1936-56, *Monthly Labor Review* 80: 1053-1058 (Sept.) 1957.

2. Medical Care Expenditures and Prices, 1955, Miscellaneous Publication M-106B, Bureau of Medical Economic Research, American Medical Association, Chicago, 1956.

In order to emphasize changes in various service prices, the same author lists the following percentage increases between 1936 and 1956: hospital room rates, 265%; men's haircuts, 221%; shoe repairs, 135%; movie admissions, 114%; public transportation, 113%; laundry service, 108%; automobile repairs, 84%; dentists' fees, 82%; general practitioners' fees, 73%; surgeons' fees, 60%.

The Medical Care Indexes.—For 1956 the group of indexes classified as medical care and drugs (mostly services) stood at 184, or approximately 10 points below the entire Consumer Price Index on the long-time basis. On the other hand, on the basis of inflation since 1949 the index for medical care and drugs stood at 132.6, or 16 points above the entire Consumer Price Index. Thus, in the long-run period of inflation, the 1956 index of medical care and drugs was 10 points below the Consumer Price Index but 16 points above for the short-run period since 1949. So in the area of medical care and drugs the long-time lag in service prices is still evident. The Bureau of Medical Economic Research of the American Medical Association has prepared a publication which presents these and other breakdowns of the indexes on both the 1935-1939 and the 1947-1949 base periods.² In the remainder of this review of inflation and medical care, comparisons will be confined to the long-run period because this inflationary period began in 1940 and not in 1949, as most adults know. Most monthly press releases on changes in the Consumer Price Index stress the changes since 1949 and present only one index for the entire medical care field.

In relating medical prices to inflation, comparisons of some of the subindexes under medical care and drugs with the entire Consumer Price Index of 194.3 in 1956 have somewhat more significance to the members of the medical profession. The indexes of physicians' fees included in the sample developed by the U. S. Bureau of Labor Statistics were below that of the Consumer Price Index for 1956 with the single exception of the fee for an "obstetric case." This particular index stood at 218.1 in 1956, or 24 points above the entire Consumer Price Index. There has been an enormous increase in the number of births, the actual increase since 1945 being from 2,700,000 to 4,100,000. From a strictly supply and demand standpoint, one would expect a higher rise in such fees than in other medical fees generally. Moreover, there are some who contend that medical fees for an obstetric case were at an unusually depressed level before World War II when the birth rate was very low and the obstetric case package contained fewer prenatal services. Whatever the explanations may be, the index for fees for an obstetric case stands out as the only exception to the general rule that

the indexes for physicians' fees in 1956 were below the entire Consumer Price Index. The 1956 index for general practitioners' fees was 172.6; for an office visit, 172.6; for a house visit, 160.9; for an appendectomy, 155.0; and for a tonsillectomy, 164.9.

Hospitals and More Babies.—The greatest change in the medical care field, however, has come in the index of hospital room rates, which stood at 356 for 1956. During this long period of inflation hospitals have been unusually exposed to the inflationary forces, particularly in the matter of wages and salaries. Moreover, the change from an average of one employee per patient to two employees per patient has harried many administrators of our voluntary hospitals. Both the quality and quantity of hospital services have changed considerably since 1940. The indexes of dentists' fees, like those for physicians' fees, have also stayed well under the level of the Consumer Price Index. Our conclusion regarding the movement of prices in the medical care field is that these prices, to the extent indicated by the indexes, have behaved rather favorably for consumers, with the two exceptions noted. (Preliminary estimates of the medical care subindexes for midyear 1957 suggest that the 1956 relationship between them and the Consumer Price Index continues. Also, the index of service prices is still lagging behind the index for all commodities.)

In the third place, the influence of inflation is also manifested in the expenditures which consumers make for medical care and for all other items. According to the United States Department of Commerce personal consumption expenditures during 1956 for medical care totaled \$12,106,000,000. In both 1955 and 1956 the total expenditures classified as those for hospital services exceeded those for services of physicians; the amounts for 1956 were \$3,451,000,000 for hospitals and \$3,269,000,000 for physicians' services. Again it must be stressed that the great increase in the number of births and the upward trend in the proportion of all babies born in hospitals has been a very powerful factor in increasing expenditures for both services.

The members of the medical profession do not need to be reminded that pregnancy is not a disease. Reproduction does involve medical care expenditures, but it is obvious that increases in such expenditures do not indicate a deterioration in the health of the American people. The same government source also reports considerably greater 1956 expenditures for recreation than for all forms of medical care and considerably higher expenditures for such items as alcoholic beverages or tobacco than for either physicians' services or hospital services. In fact, even the expenditures for personal care exceeded those for hospital services.

Even more meaningful than dollars of expenditure are the percentages of personal consumer expenditures devoted to these different items. The 1956 percentage for all medical care items was 4.5 as compared with 4.4% in 1955. The actual proportion for physicians' services alone was 1.2 in both years, whereas there was an increase from 1.2 to 1.3% for hospital services. Within the medical care field these expenditures can be better compared by treating the total expenditures for all medical care as 100 cents, the medical care dollar. The proportion of the medical care dollar being paid to physicians has declined steadily from 1929, when it was 32.7 cents, to 27.2 cents in 1955 and 27.0 cents in 1956. On the other hand, the proportion of the medical care dollar spent for hospital services has climbed rapidly from 13.7 cents in 1929 to 27.7 cents in 1955, and to 28.5 cents in 1956. Likewise, the dentists' share has steadily declined over this same interval of time.

So the general conclusion as regards the proportion of the so-called consumer budget going for medical care is that the hospitals' share has been steadily rising until it was actually the largest share in both 1955 and 1956 and the physicians' share and the dentists' share have been steadily declining. During this period of time, medical progress has occurred at an exceedingly rapid rate and the improvements in the care of patients could scarcely have been achieved without some increase in the proportion of the consumer's dollar going for hospital services.

Wage Share for Medical Care.—For employees of industrial establishments who think in terms of weekly wages this story of the relationship of inflation to medical care can be presented in still another manner, the fourth comparison. Suppose that a physician's fee for a dozen office visits or a dozen house visits would have cost an entire week's wages before World War II. The important question to the wage earner is whether the same amount of medical service would cost more than a week's wages today or less than a week's wages. For physicians' fees the answer for 1956 is 48% of a week's wages and 61% for an obstetric case. The same number of days in a hospital which would have cost a full week's wages in 1935 to 1939 would have cost 99% of a week's wages in 1956. Since such comparisons do not make allowances for the great increase in taxation, particularly in the taxes deducted from the weekly pay envelope, the standard of comparison here might be considered on a basis of the entire Consumer Price Index—say, a "market basket" containing the proper num-

ber of units of each of the items which are priced in the development of the Consumer Price Index. That standard of comparison for 1956 was 54 rather than 100%, and those items which required more than 54% of a week's wages may be considered as having been less favorable in the cost to the consumer.

Physicians' Incomes.—Turning now to the physician rather than the patient for the fifth comparison, we find that according to the U. S. Department of Commerce the average level of physicians' incomes in the United States was 122% higher in 1951 than in 1929. The average level of incomes of all gainfully employed was 125% higher. Thus during a much longer period of time the incomes of physicians and the incomes of all gainfully employed people have moved up at about the same pace. The United States Department of Commerce does not regard the studies it made of the incomes of physicians immediately before World War II as sufficiently detailed and comprehensive to provide a standard of comparison with the present levels. But that agency has made estimates for the years since 1951 and these, like the data for 1929 and 1951, show that this trend is continuing.

Other and more detailed comparisons could be made, but these five historical comparisons of the extent of inflation in the medical care sector of our national economy indicate that this sector has performed reasonably well for the consumer. Many citizens are becoming worried about the extent of inflation. As citizens, physicians should not be content to rest on their oars but should participate in discussions in their communities on ways and means to stem this dangerous inflationary tide.

Some community leaders are already suggesting buyers' strikes like those of 1919; others are urging local groups to petition the federal government to curtail spending. But if these and other attempts fail and inflation continues, it behooves the members of the medical profession to continue their efforts to moderate the ravages of inflation in the medical care sector.

DIRECTORY OF APPROVED INTERNSHIPS AND RESIDENCIES

This issue of THE JOURNAL contains the Directory of Approved Internships and Residencies together with basic information concerning the approved examining boards in medical specialties as compiled by the staff of the Council on Medical Education and Hospitals. It includes statistical data and other specific information on all hospitals recom-

mended by the Internship Review Committee for Council approval, and those approved by the Residency Review and Conference Committees for residency and fellowship education and training. Every effort is made to present this annually revised information so that it will be current and of value to medical students, interns, residents, physicians conducting such programs, hospital administrators, specialty board personnel, and others who may utilize it for reference. The directory represents a service function of the American Medical Association specifically concerned with the increasingly important field of graduate medical education and training. The Council is deeply grateful to the hospital staff personnel and administrators, to the officers of the specialty boards, and to other organizations whose cooperation and assistance has made possible this publication.

It is of interest to note that 852 hospitals offered a total of 11,895 intern positions for the year beginning July 1, 1956. Although this represents 15 fewer hospitals than were approved in the preceding year, it represents an increase of 279 positions available. In 1956 there were 6,845 graduates from approved medical schools in the United States. However, during the same year, 9,893 (83%) of the internship positions were filled, which indicates that over 3,000 were occupied by graduates of foreign medical schools or American graduates taking more than a single year of internship. There continues to be a trend for the larger teaching hospitals to have a higher percentage of internships occupied. Hospitals in the United States territories and possessions again showed the highest percentage of filled positions (97%), and the New England area had the highest intern-occupancy rate for the continental United States (89%).

In the area of graduate medical education represented by residencies, there were 5,134 approved separate training programs offering 28,538 appointments, of which 11,950 were at first-year level. These residency training programs were offered by 1,199 hospitals in which 81% of the available positions were filled. The seven specialties of surgery, internal medicine, pathology, obstetrics-gynecology, radiology, psychiatry, and pediatrics accounted for over three-fourths of the residencies offered. The percentage of available first-year residencies filled varied from 25% in public health to 100% in aviation medicine. Fields in which less than three-fourths of the positions offered were filled include allergy, general practice, neurology, otolaryngology, pathology, physical medicine, proctology, psychiatry, public health, pulmonary disease, and radiology. With the exceptions of obstetrics-gynecology, path-

ology, and thoracic surgery, in which the Council on Medical Education and Hospitals approves programs in concurrence with the board concerned, all other resident training programs are approved through residency review and conference committees.

The Council presents this annual report and directory with the hope that it will be of assistance to all individuals and organizations interested in medical education at the graduate level.

BEHIND THE SCENES

There are currently 17 residency review and conference committees which function effectively as joint liaison groups of the Council on Medical Education and Hospitals with various specialty boards and, in certain instances, the American College of Physicians, the American College of Surgeons, and the American Academy of General Practice, in the evaluation and approval of programs in graduate medical education. The story of the background and development of these important cooperative partnerships in this important aspect of medical education and training has been presented in *THE JOURNAL* (September 7, page 60). The value of these committees stimulated the development about three years ago of an Internship Review Committee on which there are representatives of the American Hospital Association, the Association of American Medical Colleges, the Federation of State Medical Boards of the United States, the American Academy of General Practice, and the Council on Medical Education and Hospitals of the American Medical Association.

The remarkable success of these cooperative committee activities in the difficult task of evaluating graduate medical education and training is largely due to the sincere interest, devotion, and hard work of the physician members who give so generously of their experience and time to these activities. These busy practitioners individually devote many hours to the comprehensive study of survey reports submitted by the Council's field staff which are forwarded to them throughout the year. Such preparatory study precedes the annual meetings of the committees. The Review and Conference Committee meetings, which are held from one to three times annually for each group, consist of one-or-two-day sessions which assure group evaluation of all programs, previously individually studied, prior to taking action. From time to time, these committees find the need for special surveys of a program or programs prior to taking definitive action. In such

instances, qualified physicians in various parts of the nation are requested to make such regional studies and submit their findings to the Committee. These eminent physicians, likewise, give freely of their knowledge, experience, and time, frequently traveling considerable distances to assist the committees, chiefs of services, and hospital administrators toward the mutual goal of strengthening graduate medical education.

Graduate medical education in general and the medical profession at large owe much to the contributions which are constantly being made by the physicians who serve so loyally on the Internship Review Committee, the Residency Review and Conference Committees, and in the conduct of special regional evaluation studies. It is this work "behind the scenes" representing the knowledge, effort, thought, and time of leaders in the various specialty fields of medicine and in general practice which is too little known and not fully appreciated. The Council on Medical Education and Hospitals is pleased to take this opportunity to express its deep appreciation to its various cooperating partners and, in particular, to the members of the profession whose cooperation and efforts have made possible the successful development of this program.

FUTURE OF THE INTERNSHIP

At the 51st Annual Congress on Medical Education and Licensure held in February, 1955, a symposium was devoted to considering the role of the internship in modern medical education.¹ It was noted that the responsibilities and duties of the intern have been increasingly delegated to student clerks on one hand and to residents on the other. There was agreement that the internship can only be defended in terms of educational value to the intern and not on the basis of service benefit to the hospital and its staff.

No unanimous conclusions were reached, but the symposium did clearly bring forth the ambiguous position of the internship as a result of the continuing development of the undergraduate clinical clerkships and graduate residency training programs. Though no final answers were provided, the long-range value of the internship as presently structured was seriously questioned.

1. Future of the Internship (Symposium), in Medical Education in the United States and Canada, 1954-1955: Part II. Proceedings of the 51st Annual Congress on Medical Education and Licensure, Chicago, Council on Medical Education and Hospitals, American Medical Association, 1955.

2. Revised Program of Medical Education at Johns Hopkins, Johns Hopkins Mag. 8: 4-11 (June) 1957.

After a period of thoughtful study, the faculty of Johns Hopkins School of Medicine has proposed a revision of its educational program.² One feature of the revised program is the transformation of the last medical school year into what will be the equivalent of a 12 months' rotating internship on the clinical services of the Johns Hopkins Hospital.

The many aspects of this soundly conceived educational experiment will be worthy of the attention of all physicians. Certainly the challenge that it presents to the current pattern of the internship will be of great interest and may help to elicit the firmer answers regarding the future of the internship that are needed.

NUTRITION AND PREGNANCY

Few doubt that the nutritional status and dietary habits of a mother have an effect on the outcome of her pregnancy. Most are equally willing to agree that the nutritional status of the mother prior to conception is also important, thereby expanding the area of nutrition in pregnancy to include the nutrition of the adolescent girl. This rather broad field of somewhat specialized nutrition demands the attention of the general practitioner; yet reliable information on the effective nutritional management of these patients is not always available. The Council on Foods and Nutrition, in an effort to fill this need, has enlisted the cooperation of the University of Missouri and the Boone County (Missouri) Medical Society in sponsoring a symposium on nutrition in pregnancy, to be held October 11, 1957, in Columbia, Mo.

To present the role of nutrition during pregnancy, topics discussed will include the influence of the maternal nutritional level on the fetus and infant, the metabolic and biochemical changes in normal pregnancy, the effect of the reproductive cycle on nutritional status and requirements, and dietary habits during pregnancy.

During the past 25 years it has become possible to experimentally produce a variety of congenital malformations, in the offspring of certain animals, by nutritional regimens imposed upon the mother. However, in the transition of such animal experiments to congenital malformations in humans, great caution must be exercised. In order to clarify the facts that are known, nutritional experiments as an instrument of teratological research have been included in the presentation. A panel of epidemiologic studies on nutrition in pregnancy will complete the one-day program. The symposium will subsequently be published in *THE JOURNAL*.
