PREFACE

The lineage of the book you now hold in your hands is a long, innovative and proud one. For sixty-six years the American Medical Association has furnished information regarding graduate medical education to medical students and interested others. During this time an elaborate and complex milieu has evolved in which the young physician still being educated must make decisions that will affect his entire professional career.

The present DIRECTORY is a compendium of facts, distilled from thousands of replies to survey instruments, and is more complete and more readily usable than ever. Up-to-date information was submitted by ninety-one percent of the program directors, and these data were verified before being added to the data bases.

From this one volume physicians can learn about the National Resident Matching Program and how to participate in it; they can select an accredited residency program from among approximately 4,700 programs in one of twenty-three specialty fields, offered by either one or a consortium of hospitals or other institutions. They can determine the standards by which that and other training programs are evaluated in the accreditation process. They can learn the requirements of any American specialty board by which they desire to become certified; and they can likewise assess the requirements for a medical license in any of the United States licensing jurisdictions.

In addition, a perusal of the section containing summary statistics can provide anyone interested in graduate medical education with an accurate overview, both broader and more detailed than ever before.

All of the above and more have been included in the current DIRECTORY through the manipulations of the computer at the American Medical Association. The totally new system of computer programs necessary to receive, confirm, sort, array, tabulate, typeset and print the data has required two years to design, implement and perfect. This process of development delayed the publication of last year's edition several months and impinged heavily on the schedule for the current edition. This 1980-81 DIRECTORY, however, is published on schedule. From now on each edition of the DIRECTORY can be expected to appear in time to be of greatest utility to the senior medical students as they select their training programs.

Since 1914 the DIRECTORY and its precursors have been highly regarded as the authoritative sources of information on graduate medical education. The completeness and adequacy of this 1980-81 edition markedly enhances its deserved reputation.

All residency programs listed in this DIRECTORY are approved at one of four levels: full accreditation, provisional accreditation (only for new programs), probationary accreditation (for programs with severe weaknesses), and accreditation to be terminated at a specific date. Programs which have appealed a decision of the Liaison on Graduate Medical Education (LCGME) automatically revert to their former level of approval until the appeal is decided.

Residency programs are listed by specialty and within the specialty, by state and city. Because the DIRECTORY is published annually, it cannot include such variable information as stipends and/or compensation, vacation time, on-call time, etc. Applicants interested in particular programs should write directly to the appropriate program directors for information.

It is a pleasure to acknowledge in this DIRECTORY the dedicated people who helped to make it what it is and to publish it on time. To Dr. Anne Crowley, Director of the Department of Educational Directories and Editor of the DIRECTORY, goes highest praise and gratitude for her extensive effort in the planning and administration of the DIRECTORY project known as the Graduate Education in Medicine System (GEMS). Dr. Crowley has been most ably assisted by Sylvia Etzel whose thoughtful attention to detail has increased the accuracy of GEMS; by Geraldine Holder who maintains the records of accredited programs and the changes affecting their listing; by Barbara Smith and Bessie Fong who provide secretarial and clerical support in the form of editing and tabulating information and handling the huge volume of mail and telephone communication. The Department staff have been assisted on a part-time basis by Ann Marie Wachowski and Gary Koche.

From among the staff of AMA's Division of Computer and Information Systems, we are especially indebted to James F. Rappel, its Director, to Bill Laing and Ray Healy who supervised the programming, to Tom Mieszala and Lou Navarro who provided computer services, to Don Burchell, Chris Collins, and John Meullner who worked on the system design, as well as to all the individuals who provided technical support. We express heartfelt thanks for their superb cooperation in this project.

For several years David Kanyer and Ralph Linberger, respectively, have had the responsibility of overseeing the typesetting and final printing of the DIRECTORY, and the cover design and other fine services. Once again they deserve our grateful cooperation and effort.

Communications concerning the content of the DIRECTORY should be addressed to the Director, Department of Educational Directories, American Medical Association, 535 North Dearborn Street, Chicago,

Illinois 60610.

Development

INTRODUCTION

Historical Background

As early as 1914 the American Medical Association published in pamphlet form a "Provisional List of Hospitals Furnishing Acceptable Internships for Medical Graduates," which named 603 hospitals.¹ The introductory paragraph described this as

... a list which may need more or less revision following an actual inspection which may in future be undertaken. In the meantime, it is a beginning which will doubtless develop into a more serviceable and satisfactory list.²

In August 1916, the word "Provisional" was omitted from the title and there were listed 687 "Hospitals Furnishing Acceptable Internships for Medical Graduates." The text noted that the list was developed from reports furnished by the hospitals and judgments made by "well known physicians in all sections of the country."³ An updated internship list appeared in the 1920 *Educational Number* of the *Journal of the American Medical Association (JAMA)*.

In 1921, the title of the list changed to "Hospitals Approved for Internships" and was published in the *American Medical Directory*,⁴ and not in the *JAMA Educational Number*.

In 1924 the *Educational Number* of JAMA carried for the first time a list of "Hospitals Approved for Residencies in Certain Specialties." Beginning in 1933 and for several years thereafter the approved internship and approved residency lists were both published in the August *Educational Number* of JAMA. In 1948 these two lists were removed from the *Educational Number* and became a special issue, *The Internship and Residency Number* of JAMA, published in May. An editorial in the same issue gave this rationale for the transfer to an earlier date:

... so that information on educational services may be available at a more convenient time to those who, later in the year, will be seeking internships and residency appointments for 1949.⁵

The October 8, 1960 *Internship and Residency Number* of JAMA was separately bound as the *Direct-*

tory of the National Intern Matching Program and was furnished to all fourth-year medical students. In 1961 this listing of internships and residencies became so extensive that it was no longer practical to publish it in JAMA. In that year it appeared as a separate publication entitled *The Directory of Approved Internships and Residencies*. This title remained unchanged until 1974-75, at which time the term "internships" was dropped.

The *DIRECTORY* has undergone several changes in the more than sixty years of its history, changes which to some extent reflect developments and trends in graduate medical education. However, in the past quarter of a century the basic color of the cover has remained the same. Since 1951, reprints of the *JAMA Internship and Residency Number*, and later the *DIRECTORY*, have been bound with a green cover. The *DIRECTORY* is popularly known as "The Green Book."

The early listings focused on *hospitals* approved for internships or residencies. Many programs today span several hospitals or other health care institutions. The title of the 1978-79 and succeeding editions, *Directory of Residency Training Programs*, reflects this change by focusing on the *programs*.

In 1919 the AMA House of Delegates approved a document entitled "Essentials of Approved Internships." This document was revised and published in 1925 as "Essentials in Hospitals Approved for Interns."⁶ In 1926 there appeared in JAMA a document entitled "Principles Regarding Graduate or Post-graduate Medical Schools." In 1928 the "Essentials for Approved Residencies and Fellowships" was published in the March 24 issue of JAMA. Over the years this document has been revised to include special requirements for each of the specialties. The latest revision is entitled "Essentials of Accredited Residencies."

"Requirements for Certification" have appeared on a regular basis since 1939. As new Boards organized and developed requirements for certification in the specialty, these were published in the *DIRECTORY*.

Another significant part of this *DIRECTORY* has been information on the program to match trainees with training programs. The 1951 *DIRECTORY* carried information on the "National Intern Matching Program." In 1968 the name of this program was revised to "National Intern and Resident Matching Program." In 1978 the name was again changed and the information

¹Cited in "Current Comments," *Educational Number* of JAMA, vol. 75: 6 (August 7, 1920), 418. This list was prepared by a special committee of the AMA Council on Medical Education, privately printed, and distributed to those who requested it. According to the AMA Archivist, there are four different lists dated "1914." Records in the Archives indicate that the list was updated by staff periodically.

²Records in AMA Archives.

appeared under the title "National Resident Matching Program."

Current Directory

The current DIRECTORY is divided into five sections. Section I contains information of importance to those concerned with graduate medical education. In this section is summarized the process by which programs are accredited; information about regulations for entry of foreign medical graduates to the United States and admission to U.S. residency programs; and a description of the National Resident Matching Program.

Section II includes the "General Requirements for Accredited Residencies" together with the Special Requirements for training in each specialty. It should be noted that the General Requirements document is currently under revision. The Specialty Requirements are current as of the May 1980 LCGME actions.

Section III includes statistical data on residency training programs, trainees in those programs, and institutions participating in graduate medical education.

Section IV is the "Directory of Accredited Residency Programs." Following the list of residency programs is a list of Flexible First-Year Programs offered by hospitals or groups of hospitals.

Section V is a "Directory of Institutions and Agencies" participating in residency training. The institutions are listed alphabetically by state and city. In addition to the name of the institution is given the name and address of the Director of Medical Education; the type of administrative control of the institution; medical school affiliations of the institution; the total number of staff positions; the number of beds; the average daily census; the percentage of necropsies; and a list of the specialties in which this institution provides training.

Appendix A contains the "List of Medical Schools in the United States." Appendix B contains the "Abbreviations Used in the Directory Listing." Appendix C contains the "Requirements for Certification" in

each of the specialties. Appendix D contains the "Requirements for Medical Licensure" in each state.

Many people have made possible the publication of the 1980-81 edition of the DIRECTORY. Program directors have been most cooperative in providing updated information on the training programs they administer. Information on institutions and agencies participating in the training programs was provided by the chief executive officers and their staffs.

The work of the twenty-three Residency Review Committees which review, evaluate, and make recommendations regarding the status of programs, provides the basis for this DIRECTORY. Particular mention should be made of the contributions of the Committee Secretaries who have provided corrected copy of revised Special Requirements and notification of the most recent actions of the Residency Review Committees and the Liaison Committee on Graduate Medical Education.

Information on the National Resident Matching Program has been provided by John Graettinger, M.D., Executive Director of that organization.

The individuals who staff the specialty boards have provided up-to-date documents on the Requirements for Certification in each of the specialties (See Appendix C). Information on licensure was provided by the state medical boards and the Department of Survey Research of the American Medical Association (See Appendix D).

The task of recording and verifying the vast amount of information included in the DIRECTORY was performed by the staff of the Department of Educational Directories.

Communications concerning the content of this DIRECTORY should be addressed to the Editor.

Anne E. Crowley, Ph.D., Editor
Director, Department of Educational Directories

INFORMATION ITEMS: Accreditation Process Foreign Medical Graduates National Resident Matching Program

THE PROCESS OF REVIEW AND ACCREDITATION OF GRADUATE MEDICAL EDUCATION

Residency training programs are accredited by the Liaison Committee on Graduate Medical Education, upon recommendation of the appropriate Residency Review Committee. Accreditation by the Liaison Committee on Graduate Medical Education indicates that the program meets the requirements of the "Essentials of Accredited Residencies," as well as, the "Special Requirements" of the specialty or subspecialty of training.

The Liaison Committee on Graduate Medical Education is composed of representatives of the American Board of Medical Specialties, the American Hospital Association, the American Medical Association, the Association of American Medical Colleges, the Council on Medical Specialty Societies, the Federal Government, and the public. The Residency Review Committees consist of representatives appointed by the Council on Medical Education of the AMA, by the specialty boards concerned, and, in some cases, by the national professional association of the specialty field. The Residency Review Committees make recommendation on individual programs to the Liaison Committee on Graduate Medical Education. The Liaison Committee acts upon the Residency Review Committee's recommendations.

The steps in the accreditation process are as follows:

1. Application for accreditation is made by the program director who supplies detailed information about the program based on the requirements of each specialty. This information is a principal basis for evaluation of the program. The application should contain a description of the content and organization of the program. Programs may be designated as:
 - a. *Independent (Intramural)*: A program conducted within a single institution. The assignment of residents is limited to that institution.
 - b. *Affiliated*: When two or more institutions develop formal agreements and conjoint responsibilities to provide complementary facilities, teaching staff, and teaching sessions.
 - c. *Integrated*: When a single program director assumes the responsibility for the residency program which involves more than one institution and the program director is responsible for all appointments of the residents and of the teaching staff.
2. Staff of the Residency Review Committees and of the Liaison Committee on Graduate Medical Education, provided by the Department of Graduate Medical Evaluation of the American Medical Association, reviews the application for completeness and general content, and schedules an on-site visit.
3. The on-site surveyor reviews the information and the program at the institution, organization or agency which offers the program, and reports his findings.
4. All information is compiled and placed on the agenda for the appropriate Residency Review Committee.
5. The Residency Review Committee reviews the program in detail, determining its content and the degree to which it meets the published educational standards. On the basis of its evaluation, the Residency Review Com-

mittee makes recommendations to the Liaison Committee on Graduate Medical Education regarding the quality of the program, its deficiencies (if any) and whether or not the program should be accredited. The Committee may make the following recommendations to the LCGME:

Full approval... Recommendations to this category may be made in three circumstances:

- a) Programs holding Provisional Approval which have continued to meet the "General" and "Special Requirements" for approval.
- b) Programs holding Full Approval which, following resurvey and review, continue to meet the "General" and "Special Requirements" necessary to Full Approval.
- c) Programs which had been placed on Probation and are subsequently judged to meet the "General" and "Special Requirements" and thereby justify a restoration to the category of Full Approval.

Approval Withheld... Recommendation to this category may be made when the Residency Review Committee finds that a new program seeking approval does not satisfy the "General" and "Special Requirements" of the *Essentials of Accredited Residencies*.

Provisional Approval... Recommendation to this category may be made for new programs, not previously approved or upon reapplication by a previously approved program which has had its approval withdrawn and is judged to satisfy the "General" and "Special Requirements" of the *Essentials of Accredited Residencies*. Provisional Approval may also be recommended in the unusual circumstance in which a fully approved program has been so altered that in the view of the Residency Review Committee it is the equivalent of a new program. In each event, the effective date of Provisional Approval will be stipulated. In general it should coincide with the beginning of the current year of service for enrolled residents.

All programs with provisional accreditation, whether or not they have residents should be resurveyed and evaluated by RRC's at a time no longer than three years after the initial notification of provisional accreditation. Provisional accreditation may not exceed a time equivalent to the minimum length of the program plus one year. Special exception may be made. If Full Approval is not recommended within this time, provisional approval will be withdrawn, providing a resurvey has been made and the program has been reviewed by the Residency Review Committee.

Probationary Approval... Recommendation to this category may be made for currently accredited programs which upon evaluation show specific deficiencies which are considered to be correctable. Such programs may not be on probation for more than four consecutive years. If resurvey and review by the Residency Review Committee finds the stipulated deficiencies corrected, reinstatement to Full Approval may be recommended. When the LCGME takes action to accredit a program on a probationary basis, program directors are required to apprise in writing all current residents and applicants of the LCGME action, whether or not the action is being

appealed. The effective date of probation shall be the date of LCGME action to accredit the program on a probationary status.

Approval Withdrawn . . . Recommendation to this category is appropriate when any one of four conditions prevail:

- a) A program holding Provisional Approval has failed to meet the criteria for Full Approval.
- b) A program holding Probationary Approval has failed to correct its deficiencies and thus cannot meet the criteria required for Full Approval.
- c) Granted without prejudice to a program which voluntarily withdraws from resident training.
- d) The merger of two or more programs into a single new program should result in the early evaluation of the new program with subsequent withdrawal of approval of the separate programs, once accreditation of the new program is achieved.

When accreditation is withdrawn, the effective date of that withdrawal shall be not less than one year from the date of the LCGME action; or when the action is appealed and said action is sustained, shall be not less than one year from the date the action is sustained. In either case, the effective date of withdrawal shall permit the completion of the training year in which the action becomes effective.

Once notification has been made of withdrawal of approval, no residents may be appointed to the program.

When the LCGME takes action to withdraw accreditation of a program, program directors are required to apprise in writing all current residents and applicants of the LCGME action, whether or not the action is appealed.

6. The Liaison Committee on Graduate Medical Education reviews the program in light of the recommendations of the Residency Review Committee to determine whether the recommendations are in keeping with the General and Special Requirements, and whether the recommendations of the Residency Review Committee are supported by the evidence in the record (or file) of the program.
7. The Liaison Committee on Graduate Medical Education acts on the recommendations of the Residency Review Committees. Following its action, letters of notification are sent immediately to program directors, with copies to hospital administrators, deans of medical schools where applicable, and to the parent bodies of the Residency Review Committees.
8. In case of adverse decisions, the program director may appeal the action of the Residency Review Committee and the Liaison Committee on Graduate Medical Education. The appeal is heard and acted upon according to the procedure adopted by the Liaison Committee on Graduate Medical Education.

PROCEDURES FOR APPEAL OF ADVERSE ACTIONS

Approved July 26, 1977

and

Revised September 11, 1979

by

LCGME

Appeal of an adverse action by the LCGME on the status of accreditation of a program of graduate medical education provides for two steps of review.

I. Reconsideration

- (a) A decision by the LCGME to deny or withdraw accreditation or to place or continue a program on probation when transmitted to the program involved shall include in the letter of notification the basis for the decision and inform the program director of his right to request reconsideration. When a written request for reconsideration is received the status of the program

shall revert to its status prior to an action of the LCGME to withdraw or withhold approval or to place a program on probation during the process of reconsideration.

- (b) Written requests for reconsideration shall be submitted to the Chairman of the LCGME within 30 days following mailing of the notification and shall specify reasons for requesting reconsideration.
- (c) The Chairman of the LCGME shall forward the request for reconsideration to the Chairman of the appropriate Residency Review Committee. The information upon which reconsideration is based must be that which pertains to the program *at the time of a field survey and the initial evaluation* by the RRC. New information based on data subsequent to the survey and the initial review or representing changes in the program following an adverse decision cannot be considered at this time by the Residency Review Committee. Residency Review Committees shall complete the reconsideration no later than their next scheduled meeting and promptly submit recommendations to the LCGME.
- (d) At the first meeting of the LCGME following receipt of the recommendations from the Residency Review Committee, the status of the program shall be determined by the LCGME which will immediately notify the program of its decision and the right to appeal an adverse decision.
- (e) Programs in which substantial changes have occurred subsequent to the action of the RRC and the LCGME should be submitted by the program director *as part of a new application for evaluation and accreditation of the program.*

II. Appeal Hearing

- (a) If, following reconsideration, the LCGME sustains its initial action, the program director may request a hearing before a Board of Appeals. This Board will be appointed, according to the following procedure, by the Chairman of the LCGME.

If written request for such a hearing is not received by the Chairman of the LCGME within thirty (30) days following notification of the action of the LCGME, the action of the LCGME will be final.¹

- (1) The program director filing a formal request for an appeal hearing shall submit to the Chairman of the LCGME a list of five names and addresses of directors of approved residency programs in the specialty under consideration.

The Chairman of the appropriate RRC shall also submit to the Chairman of the LCGME a list of five names of directors of approved programs who are not members of the RRC. These names will be submitted to the Chairman of the LCGME within thirty (30) days of the initiation of the appeal. The Chairman of the LCGME shall also prepare a list of five names of persons who have knowledge and experience in general administration of institutions conducting approved programs in graduate medical education.

- (2) Upon receipts of the lists, they will be forwarded to the program director who has initiated the appeal and to the Chairman of Residency Review Committee. The program director and the Chairman of the RRC may request that no more than two names be removed from each of the three lists if they are unacceptable. The corrected lists, signed by the appellant and by the Chairman of the RRC will be returned to the Chairman of the LCGME, c/o The

¹Letters to be sent certified mail, return receipt requested c/o The Secretary of the LCGME, 535 North Dearborn Street, Chicago, Illinois, 60610.

Secretary of the LCGME, 535 North Dearborn Street, Chicago, Illinois, 60610 as soon as possible and no later than fifteen (15) days after receipt of the lists.

- (3) The Chairman of the LCGME will then select one name from each of the three lists of persons acceptable to the program director and the Chairman of the RRC to form a Board of Appeals to hear the appeal. All parties will be notified of the membership of the Board of Appeals.

- (b) Hearings requested in conformity with these procedures will take place no later than sixty (60) days following the appointment of the Board of Appeals.

At least twenty-five (25) days prior to the hearing the program director and the institution shall be notified of the time and place of the hearing. The program director and institution have the right to request and obtain the information in the program file on which the Residency Review Committee recommendations and the LCGME's actions were taken, including reports of field staff and specialist surveys, progress reports, additional clarifying information provided by the program director. This additional information must be for purposes of clarification only and cannot describe new components of the program or changes made subsequent to the initial action (as defined above).

Written briefs may be submitted to the Board of Appeals not later than two (2) weeks following the hearing providing that formal request to submit such briefs is made to the Board of Appeals at the time of the hearing.

- (c) The permanent file together with formal presentations at the hearing, the proceedings of the hearing and briefs submitted under the provisions outlined above shall be the basis for the findings of the Board of Appeals.

- (d) At any hearing before the Board of Appeals, the institution may be accompanied by counsel, make oral presentation, offer testimony and request that representative(s) of the bodies involved in the evaluation of the program appear to present testimony. The institution at least fifteen (15) days prior to any such hearing shall request in writing the presence of such representative(s) whom it wishes to examine.

Proceedings before a Board of Appeal are not of an adversary nature as is typical in a court of law, but, rather, provide an administrative mechanism for peer review of an accreditation decision about an educational program. Since a Board of Appeal is not a court of law, it shall not be bound by technical rules of evidence usually employed in legal proceedings but may accept any information it deems appropriate and pertinent on the content of the program and the degree to which it meets the published educational standards.

The institution, through its representatives, shall have the opportunity to be present at the hearing to attempt to rebut the prior findings and defend the program.

Although there is no subpoena power to compel the attendance of any individual at a Board of Appeal hearing, a request by the institution for the presence of any individual shall be sent to that individual by the Secretary of the LCGME if it is timely received pursuant to these procedures.

- (e) Following the hearing or submission of briefs, the Board of Appeals shall submit within fifteen (15) days a recommendation on the status of the program for consideration by the LCGME at its first meeting following the hearing and report to the Board of Appeals. The resulting subsequent decision by the Liaison Committee as to the status of the program shall be final.

- (f) Expenses of the Board of Appeals shall be shared equally by the appellant and the LCGME. The expenses of witnesses requested by the appellant will be the responsibility of the appellant.

CHANGE IN CHARGE FOR EVALUATION AND ACCREDITATION OF PROGRAMS

Fees charged for the accreditation of programs may be changed from time to time by decision of the Liaison Committee on Graduate Medical Education. As of January 1, 1980, the following fee structure is in effect.

A. Administrative Review

A fee is charged for the following:

- a) New applications.
- b) Request for an increase or decrease in the resident complement, in those cases in which Residency Review Committee action is required; and request for the increase and decrease in the number of hospitals in a program, under those circumstances when Residency Review Committee action is required.

The charge for administrative review is \$100.00. It is billed at the time requests are reviewed.

B. Program Survey

Fees charged for the following on-site inspections of programs:

- a) Survey by an AMA Field Representative. The charge for this survey is \$650.00.
- b) Survey by a Specialist in the appropriate discipline. The charge for this survey is \$850.00.

Program directors should be aware that processing of an application for a new program requires several steps and is dependent on the meeting times of both the appropriate Residency Review Committee and the Liaison Committee on Graduate Medical Education. Thus, it should be anticipated that the processing of an application will require 6 to 12 months from the time it is received in the office of the secretary until action is taken by the Liaison Committee on Graduate Medical Education.

WHERE TO WRITE FOR INFORMATION

Inquiries regarding any aspect of the accreditation process should be directed to the secretary of the appropriate Residency Review Committee at the following address: 535 N. Dearborn St., Chicago, IL 60610.

Any inquiries regarding certification of individual candidates in any specialty should be directed to the appropriate board in that specialty. (See Appendix C, Table 2 for address.)

Inquiries regarding the Match Program should be directed to the National Resident Matching Program, 1603 Orrington Avenue, Evanston, Illinois 60201.

ENTRY OF FOREIGN-BORN MEDICAL GRADUATES TO THE UNITED STATES

The entry of foreign-born medical graduates to the United States is governed by the Immigration and Nationality Act. In practical terms, this means that program directors considering foreign-born foreign medical graduates should appoint only those who hold an appropriate visa. There are two appropriate visas, the exchange visitor (J-1) visa, and the immigrant visa. These foreign-born foreign medical graduates would, in addition, of course, hold the standard ECFMG certificate.

Foreign medical graduates who hold exchange visitor visas can be appointed only to residency programs in a medical school hospital, or in a hospital affiliated with a medical school; and the medical school must agree in writing to provide the training for which the medical graduate is coming to the United States. An exchange visitor can remain in the United States for only two years, with the exception that his stay can be extended by one year if the request is made in writing by the medical graduate's government, if the medical school agrees, and if the extension is for the purpose of continuing the training for which the medical graduate came to the United States.

Exchange visitor foreign medical graduates are at present required to have passed the Visa Qualifying Examination in order to obtain a visa and they must have demonstrated competency in oral and written English. They must also have undertaken their medical studies at medical schools listed in the World Directory of Medical Schools and must have completed all of the medical education requirements of the country where they went to medical school. They must in addition have committed themselves to return to their home country after they complete their training in the United States, and their country must provide written assurance that there is need in that country for services in the specialty of the graduate's training. A graduate holding an exchange visitor visa and a standard ECFMG certificate has met these requirements.

Summary of Requirements for Waiver of the VQE²

Through December 31, 1980, residency programs can apply for a waiver of the requirements that the residency training be provided by medical school hospital, or that the exchange visitor foreign medical graduate have passed the Visa Qualifying Examination. This waiver is called a "substantial disruption" waiver; the name derives from a provision of Public Law 94-484 to the effect that such waivers would be provided to institutions when necessary to prevent a "substantial disruption" of health services. Information about "substantial disruption" waivers is available from the Education Commission for Foreign Medical Graduates. There are four categories of programs that can qualify for the waivers:

- CATEGORY A:** Accredited graduate medical education training programs in anesthesiology, child psychiatry, general practice, nuclear medicine, pathology, pediatrics, physical medicine, psychiatry, or therapeutic radiology, which had more than 25 percent of all their positions occupied by foreign-born medical graduates on January 10, 1978;
- CATEGORY B:** Accredited graduate medical education training programs in specialties other than those described in Category A above which had more than 25 percent of all their positions occupied by foreign-born medical graduates on January 10, 1978, and which provide 50 percent or more of their full-time equivalent training in a facility located in a primary medical care manpower shortage area, or had more than 25 percent Medicaid patients in calendar year 1977;
- CATEGORY C:** Accredited graduate medical education training programs which are in specialties or locations other than those described in Categories A and B and had more than 50 percent of all of their positions occupied by foreign-born foreign medical graduates on January 10, 1978;
- CATEGORY D:** A hospital (a) which had more than 25 percent foreign-born foreign medical graduate physicians, in total, in its training programs conducted solely within its facilities, on January 10, 1978, and (b) which is located in a primary medical care manpower shortage area or had more than 25 percent Medicaid patients in calendar year 1977.

It should be noted that programs which are provided with waivers are required subsequently to reduce the number of foreign medical graduates in the program each year according to a schedule set forth in the waiver provisions.

²At the time the *Directory* went to press it was not certain whether the waiver provisions would be extended to include residency appointments for the year beginning July 1, 1981. Inquiries concerning such an extension should be addressed to ECFMG.

Immigrant Foreign Medical Graduates

Foreign-born foreign medical graduates who immigrate to the United States similarly are subject to regulations. Program directors should determine that such individuals have an immigrant's visa and an ECFMG certificate, or in very rare instances, a full and unrestricted state license to practice medicine. Foreign-born foreign medical graduates may immigrate to the U.S. in a number of different ways. The most common way is to enter on a third-preference visa, that is, as a professionally trained physician or surgeon coming to the United States to practice medicine. A foreign medical graduate may immigrate to the U.S., however, as a political or religious refugee or as the first-degree relative of a U.S. citizen or a U.S. permanent resident. Those physicians who immigrate to the United States to practice the profession of medicine must take the Visa Qualifying Examination and satisfy other immigration rules, which include obtaining a U.S. Department of Labor certificate indicating that they are not being appointed to a position that an equally qualified U.S. citizen or permanent resident has sought. The Visa Qualifying Examination can lead to the ECFMG certificate; consequently, a foreign medical graduate does not need to take both the VQE and ECFMG examination. Program directors who are contacted by foreign-born medical graduates with questions about immigration should refer the inquirer to a U.S. Consul General (if the inquiry comes from abroad) or to the Immigration and Naturalization Service (if the inquiry comes from within the U.S.). Only the U.S. Consular Service or the Immigration and Naturalization Service can rule whether or not a foreign-born foreign medical graduate must take the VQE in order to be eligible to immigrate. The concern of the residency program director is to determine that the foreign graduate has the standard ECFMG certificate and a visa permitting him to work in the U.S. Information booklets for both the ECFMG and the VQE are available from ECFMG at 3624 Market Street, Philadelphia, PA 19104.

Rules and Regulations for Public Law 94-484, published in the Federal Register, Volume 43, Number 63 on Friday, March 31, 1978, pages 13504 and following, indicate that a foreign-born foreign medical graduate can be admitted to the United States for the purpose of "observation, consultation, teaching, or research" (not involving patient contact) without having passed the VQE. A U.S. university or academic medical center which has been designated as an Exchange Visitor Program is authorized to issue Form DSP-66 in such circumstances. A university or academic medical center, as a designated Exchange Visitor Program, can similarly issue a DSP-66 form to a foreign-born foreign medical graduate who is entering the U.S. for observation, consultation, teaching, or research, when the activity involves incidental patient contact which occurs under the direct supervision of a physician who is licensed to practice in one of the states of the United States. Such appointments should be discussed with ECFMG. Information concerning them is available in a "White Paper on the Issue of Regulation of Numbers and Types of Graduate Medical Education Positions for FMG's as Contained in PL 94-484," which is available from the Coordinating Council on Medical Education (P.O. Box 7586, Chicago, IL 60680).

ADMISSION REQUIREMENTS FOR GRADUATES OF FOREIGN MEDICAL SCHOOLS

It should be emphasized that in order to maintain accreditation of a residency program, foreign medical school graduates admitted to the program should meet one of the following conditions:

- Certification by ECFMG on the basis of satisfying the ECFMG educational requirements, as well as passing the ECFMG examination; or
- Obtain a full and unrestricted license to practice medicine, issued by a state or other United States jurisdiction authorized to license physicians; or

- c. In the case of United States citizens, successfully pass the complete licensure examination in any state or other licensing jurisdiction in which the law or regulations provide that a full and unrestricted license to practice medicine in that state or jurisdiction will be issued to the physician after satisfactory completion of his internship or residency in that state, without further examination. To be eligible for this route, the foreign medical graduate must have completed all educational requirements that would make him eligible for ECFMG certification should he choose to apply; or
- d. Complete a "Fifth Pathway" as described below.

The Fifth Pathway

The "Fifth Pathway," is available to American students in foreign medical schools who have fulfilled the following conditions:

- a. Have completed, in an accredited American college or university, undergraduate premedical work of the quality acceptable for matriculation in an accredited U.S. medical school;
- b. Have studied medicine in a medical school located outside the United States, Puerto Rico, and Canada, which is listed in the World Directory of Medical Schools, published by the World Health Organization;
- c. Have completed all of the formal requirements of the foreign medical school except internship and/or social service. Those who have completed all of these requirements including internship and/or social service are not eligible.

Students who have completed the academic curriculum in

residencies in a foreign medical school and who have fulfilled the above conditions may be offered an opportunity to substitute for an internship or first-year of graduate education required by a foreign medical school, an academic year of supervised clinical training (such as a clinical clerkship or what was formerly called a junior internship) prior to entrance into the first year of approved graduate medical education. The supervised clinical training must be under the direction of a medical school approved by the Liaison Committee on Medical Education.

Before the beginning of the supervised clinical training, such students must have their academic records reviewed and approved by the medical school supervising the clinical training and must attain the score satisfactory to the sponsoring medical school on a screening examination or procedure acceptable to the Council on Medical Education, such as the ECFMG examination, or the FLEX Examination. The Council on Medical Education will consider the acceptability of any other screening examination or procedure proposed by a sponsoring medical school.

Such students who are judged by the sponsoring medical schools to have completed successfully supervised clinical training are eligible to enter the first-year approved graduate training programs without completing social service obligations required by the foreign country or without obtaining ECFMG certification.

The Council on Medical Education has recommended to all state boards of medical examiners that they consider for licensure all candidates who have completed successfully the supervised clinical training program on the same basis as they now consider foreign medical graduates who have received ECFMG certification.

The National Resident Matching Program

The *Directory of Residency Training Programs* lists all of the hospitals with resident training programs accredited by the Liaison Committee on Graduate Medical Education. For the past 27 years, over 90% of the hospitals approved for such training have offered their first year positions through the National Resident Matching Program (NRMP). The NRMP is limited to those hospitals which have signed an agreement to participate for the coming year.

Because essentially all specialty boards have made significant modifications in their requirements, it is now possible for medical students to apply for a first year of graduate medical education or a first year of residency in most specialties. These recent policy changes have made it possible for new medical graduates to select their first year of graduate medical education from a much broader program base. Medical students, as well as the organizations sponsoring the NRMP, are of the opinion that the first year of graduate medical education should be included in the matching program.

In the NRMP List the federal services, except for the Veterans Administration, are listed first. Essentially all Veterans Administration hospitals that offer graduate medical education participate as components of integrated programs. The Army, Navy, Air Force do not participate in the Matching Program. Persons applying for training in the Public Health Service should apply directly to the hospital involved. Matching will take place to a specific Public Health Service Hospital rather than to the Federal Service itself. The government services do not issue contracts. Following the listings of the federal services, all participating hospitals are listed alphabetically by state, within each state by city, and within the city by the name of the hospital. In writing to a hospital the student should address the Program Director.

The *Directory of Residency Training Programs* includes additional information of a statistical nature and also lists the name and address of the program director.

The NRMP List of Participating Programs is sent to students in the program by the NRMP in October. A six-digit number designates each specific hospital and type of program, or track within a program, at each individual hospital. It is to be used by the students on the confidential rank order list they send to NRMP to indicate their choice among the programs for which they have applied. Several special tracks may be offered within some types of residency programs for the Matching Program. These may include tracks that designate particular kinds or locations of training within the accredited program. It is essential that students use the specific, six-digit code number for each of their selections on their rank order lists.

If students are applying to a hospital which offers several different types of programs or tracks, they must indicate on their confidential preference blank their preference for the specific type of program track in that hospital for which they have applied. For example, if students apply for a residency in surgery and also a flexible program at the same hospital, they must rank these just as if they were in separate hospitals.

A supplement list of new and deleted programs is sent to participants in December.

Because of the intense desire of some hospitals to secure candidates, and because of an equally strong desire of some students to serve at a particular hospital, pressure may be brought by either party in the other to force an early commitment. Such demands are contrary to the NRMP Agreements that are signed by students, program directors, and hospitals. Moreover, in the matching plan only the confidential rank order lists submitted by hospitals and students determine the

INFORMATION ITEMS

placement of students in programs.

The matching plan does not penalize either group from taking "flyers." Should students apply to a hospital in which they think their chances of acceptance are poor, their chances at their second choice hospitals are just as good as if they had rated them first. Similarly, if hospitals rate as their first choice, applicants they believe they have little chance of securing,

and do not secure them, such hospitals will have just as good a chance to get their second choice applicants as if they had rated them first.

Individuals who wish to participate in the Matching Program may obtain application materials and more detailed information by writing to the National Resident Matching Program, 1603 Orrington Avenue, Evanston, Illinois 60201.

Section II

REQUIREMENTS FOR ACCREDITATION OF PROGRAMS

This Section contains documents which describe the General Requirements for all residency training programs, and the Special Requirements for training in the various branches of medicine. The document, "Essentials of Accredited Residencies" has been adopted by the Liaison Committee on Graduate Medical Education (LCGME) on an interim basis. This document is currently undergoing major revision.

The twenty-three sections of the document which give the Special Requirements for training programs in the various branches of medicine have been approved by the appropriate Residency Review Committee, the parent bodies of the Residency Review Committee, and the LCGME.

The Special Requirements documents specify in general terms the curriculum content for an acceptable training program. These documents may also address the general characteristics of the resources and personnel necessary for the program, as well as the duration of training and other specifications for a program. The certification requirements for each American Specialty Board, formerly included in this Section, will be found in Appendix C of this DIRECTORY.

The distinction between "accreditation of a training program" and "certification of an individual physician is an important one. Accreditation is the process whereby the Liaison Committee on graduate medical education grants public recognition to a spe-

cialized program which meets certain established educational standards as determined through initial and subsequent periodic evaluations by the Residency Review Committee. The primary purpose of the accreditation process is to provide a professional judgment as to the quality of the educational program. By this process the potential candidate to the program is assured that the program meets the standards set by professionals in that specialty.

Certification is the process by which a specialty board grants recognition to an individual physician who has met certain predetermined qualifications, as specified by the board.

Neither of the above should be confused with licensure, which is the process by which an agency of state government grants permission to an individual physician to practice medicine within the jurisdiction of that state. A summary of medical licensure requirements of the fifty states is given in Appendix D of this DIRECTORY.

Individuals seeking further information concerning the requirements for certification by a specialty board should correspond with the Executive Secretary of the appropriate board. The names and addresses of these individuals will be found in Appendix C. Individuals seeking to be licensed in a particular state should contact the corresponding officer of the Board of Medical Examiners for that state. The names and addresses of these officers are found in Appendix D.

Essentials of Accredited Residencies

REVISED TO MAY 20, 1980

INTRODUCTION

Residencies in the clinical divisions of medicine, surgery, and other special fields provide advanced training in preparation for the practice of a specialty. Approval for residency training in the clinical specialties is limited to programs conducted in general or special hospitals. However, the term residency training is also applied to certain non-clinical programs in graduate medical education which may be conducted in organized medical facilities outside of a hospital.

It is desirable, for the purpose of clarification, to differentiate between two terms commonly used in referring to higher medical education. Graduate training, as used in these Essentials, refers to the various recognized plans of training which lead to qualification in a specialty. Postgraduate training in contrast, refers to formally organized shorter courses, offered by medical schools, hospitals, clinics and medical organizations which provide advanced instruction in a limited field, primarily designed for physicians in practice. Residencies in the following branches of medicine are approved by the Liaison Committee on Graduate Medical Education (LCGME).

1. Allergy and Immunology
2. Anesthesiology
3. Colon and Rectal Surgery
4. Dermatology
Dermatopathology
5. Family Practice
6. General Surgery
Pediatric Surgery
7. Internal Medicine
8. Neurological Surgery
9. Neurology
10. Nuclear Medicine
11. Obstetrics and Gynecology
12. Ophthalmology
13. Orthopedic Surgery
14. Otolaryngology
15. Pathology
Blood Banking
Dermatopathology
Forensic Pathology
Neuropathology
16. Pediatrics
Pediatric Allergy
Pediatric Cardiology
17. Physical Medicine and Rehabilitation
18. Plastic Surgery
19. Preventive Medicine
General Preventive Medicine
Aerospace Medicine
Occupational Medicine
Public Health
20. Psychiatry and Neurology
21. Radiology
Diagnostic Radiology
Therapeutic Radiology
Nuclear Radiology
22. Thoracic Surgery
23. Urology

It is recognized that while some hospitals may be unable to meet the educational standards for graduate training in the specialties, as set forth in the Essentials, they may be able to offer experience of value to young physicians. These hospitals may well consider the appointment of paid house physicians to assist in conducting the professional work of the hospital. Experience of this type does not ordinarily carry credit towards certification in the specialties or towards qualification for membership in special societies.

I. GENERAL REQUIREMENTS

Hospitals conducting or applying for approved residency programs should be accredited by the Joint Commission on Accreditation of Hospitals.

This implies that the hospital must be properly organized, staffed, and equipped and that its activities are conducted primarily for the welfare of the patient. While the educational program is supplementary to the primary purpose of the hospital, i.e., the care and management of patients, it is directly related to this function in that it serves to improve the quality of medical care offered.

Size and Type: The size of the institution is not a primary consideration. The clinical material, however, should be of sufficient scope and diversity to enable residents to observe the principal manifestations of the disease conditions, in the understanding and management of which they are acquiring additional experience. The number of service or ward beds, rather than the total bed capacity, is of significance in this connection. In hospitals admitting principally private patients, the availability of these patients for teaching purposes is an essential consideration.

Official approval is extended to general and special hospitals offering acceptable programs in the various specialty fields. Programs conducted in hospitals associated with medical schools are ordinarily of three or more years in duration and offer special facilities for progressively graded, comprehensive training. A number of hospitals not directly affiliated with medical schools, have organized programs of graduate training which comply with all the requirements of the Essentials of Accredited Residencies. Some of these hospitals, utilizing their own facilities to the fullest extent, have developed acceptable, fully approved programs. Other hospitals of this type, have supplemented their educational program through affiliation with medical and graduate schools, or with other hospitals which are able to augment the resident's training in those phases which might otherwise be considered deficient. The rotation of residents from an approved hospital to an affiliated institution which is able to provide experience lacking to the parent hospital is often desirable, when properly supervised.

Plant and Equipment: The physical plant should be adequately constructed and planned to assure proper medical and hospital care as well as safety and comfort for the patient. Equipment, appliances, and apparatus such as are commonly employed in the practice of modern, scientific medicine, should be available. In those departments in which residencies are being offered, space and equipment should be made available for the use of the resident staff in addition to that ordinarily required by the service.

1. Staff

The teaching staff should be composed of physicians and other health professionals qualified on the basis of educational background and professional accomplishment, oriented to the requirements and responsibilities of the teaching appointment and motivated to assign acceptable priority

*Previous versions of this document were entitled "Essentials of Approved Residencies" and "Essentials of Approved Residencies and Fellowships." Because of the multiple meanings of "Fellowship," this part of the title was deleted a number of years ago. The word "Accredited" has recently been adopted instead of "Approved."

to teaching duties. A well organized and well qualified staff is one of the most important requisites in a hospital assuming responsibility for residency training. It may well be the determining factor in the development and approval of a graduate training program. There should be an educational committee of the staff which is responsible for the organization of the residency program, for the supervision and direction of the residency program, and for correlating the activities of the resident staff in various departments of the hospital. The committee might well include the pathologist, the radiologist, and other department heads who, because of the inherent relationship of the departmental work will be called on to assist in the training program.

The particular specialties in which residents are being trained should be represented in the staff by well qualified, experienced, and proficient physicians; whether or not they hold membership in special societies and colleges or are certified in their specialty. Adequate organization of the medical staff presupposes careful selection of the head of the department and of the chiefs of the various services. In addition to their qualifications in the specialty, they should have high professional standing, and possess the attributes of the teacher. Being responsible for the training of residents, they should be chosen on the basis of ability, aptitude, and interest.

Members of the attending staff should be assigned by the department head to specific responsibility as far as the work of the services is concerned. The service of each attending physician should include an adequate number of patients and extend over a sufficient period to elicit his full interest and attention while on service. On the other hand the service should not be so large as to be a burden to the attending staff and thus result in reduced attention to the educational program. In all instances, it is imperative that the head of the department be available to assume full responsibility for supervision of the work in the department.

The staff must hold an adequate number of regularly scheduled clinical pathological conferences and other staff conferences, in addition to meetings of the staff at which the histories, clinical observations, laboratory studies, and pathology of selected cases are reviewed. Scientific meetings at which papers are presented by members of the staff or guest speakers are considered commendable but do not serve to meet the requirements of these scheduled conferences. In addition to meetings of the staff as a whole, it is expected that departmental conferences will be conducted in which residents should take an active part, so that the quality of the service given by that department to its patients may be recurrently evaluated. Other educational activities requiring the full support and cooperation of the staff are described under Training Program, and Applied Basic Sciences (Section I-7, I-9) and under Special Requirements (Section VI).

2. Department of Radiology

The department of radiology should be under the direction of a qualified radiologist proficient in the various functions of his specialty. He must cooperate fully in the training of all hospital residents and supervise any direct contact which they may have with the work of the department. This supervision, if not full time, necessitates at least daily visits to the hospital during which the radiologist is expected to be available for consultation with the resident staff in addition to supervising the work of the department.

The department should contain modern roentgenographic, roentgenoscopic, and where indicated, therapeutic equipment and radium adequate for the needs of the hospital. The department should be properly organized to carry out its functions in an effective manner. It should keep adequately indexed records, including cross indices, to assure efficient operation and to facilitate investigative work. These requirements are essential in institutions offering residency programs in any field.

3. Department of Pathology

The department of pathology should be under the direction of a qualified pathologist who shall be prepared to cooperate

fully in the training of all hospital residents and supervise any direct contact they may have with the laboratory. There should be continuous supervision of the laboratory by the pathologist who, preferably, should have no responsibilities outside the hospital that would prevent his being available for consultation and for guidance of the resident's work.

The department should provide adequate space and equipment for the resident's use in addition to that required for the proper functioning of the service. Apparatus, reagents, and materials necessary for the operation of a modern clinical and pathological laboratory should be available. The department should be organized to provide a high quality of service for the clinical departments and to permit of its active participation in the educational program. An efficient system of records including cross indices should be maintained, to assure proper functioning of the laboratory and to facilitate investigative work. This department should assume much of the responsibility for the clinical pathological conferences and other educational activities of the staff.

The facilities of the autopsy room should be ample enough to permit participation by the resident staff. Thoroughness in postmortem examination should be emphasized. Complete necropsy records should be kept on file and each should contain a summary of the clinical record and detailed description of both the gross and microscopic observations. Residents of all departments should attend postmortem examinations unless other important duties prevent. They may, with value, participate in the performance of necropsies, including the preparation of the protocol, and in the review of microscopic findings on materials derived from their own and other services.

It is expected that hospitals assuming responsibility for resident training will maintain a high autopsy rate. It is felt that the autopsy rate is a reliable gauge of the staff's interest in scientific advancement. (A description of the special requirements for an approved residency in pathology is given in Section VI.)

4. Biomedical Information

Institutions offering approved residencies should provide access to biomedical information including carefully selected, authoritative medical textbooks and monographs, recent editions of the *Index Medicus*, and current medical journals in the various branches of medicine and surgery in which training is being conducted, as well as other learning resources (e.g. audiovisuals). The information resources should be properly supervised.

5. Medical Records Department

The record department should be adequately supervised, preferably by a qualified medical record librarian. An efficient record system should be maintained, including alphabetical and diagnostic patient indices. Operative reports, roentgenological, and pathological records should be properly classified, permitting a ready reference. The employment of the *Standard Nomenclature of Diseases and Operations* is recommended for all medical records, although *Current Medical Terminology* may provide an additional useful tool in the management and utilization of clinical records. For coding or indexing, either the *Standard Nomenclature of Diseases and Operations* (SNDO) or the *International Classification of Diseases, Adapted for Indexing Hospital Records by Diseases and Operations* (ICDA) may be used.

Clinical records must be completed and include the patient's chief complaint, case history, physical examination on admission, a provisional diagnosis, record of laboratory examinations, therapy employed, descriptions of operations if performed, adequate progress notes, consultation remarks, a final diagnosis, condition on discharge, necropsy observations in case of death if postmortem examination is performed, and an appropriate summary. The records should show by signatures or at least initials, the names of all physicians writing the record in whole or part, as well as the names of the staff members by whom the records are verified. Each

completed record should be verified by a responsible staff member.

In a hospital assuming responsibility for graduate training, it is expected that the clinical records be sufficiently comprehensive to permit of their use for teaching purposes. While responsibility for the preparation of parts of the record, such as the admission work-up, may be delegated to the intern or resident assigned to the case, the ultimate responsibility for the completed record lies with the staff member in charge.

There should be a records committee of the staff which will meet periodically with the record librarian to review the clinical charts and report their findings. This committee may be empowered to make recommendations concerning the disciplinary measures necessary to assure the maintenance of adequate clinical records on a current basis. Satisfactory records can be maintained only through the continuous and cooperative efforts of the staff, the medical records department, and the hospital administration.

6. Selection of Residents

The development of a satisfactory program requires, first of all, a careful selection of applicants for appointment to the resident staff. The hospital administration and medical staff, through appropriate review of credentials, should ascertain that the personal and medical qualifications of applicants selected for residency positions are satisfactory. There should be confidence that the residents appointed have the high standards of integrity, motivation, industry, resourcefulness, health and basic medical knowledge necessary to take full advantage of the further educational experience offered. This should include assignment of carefully graded and progressive responsibility for patient care. The qualifications of the resident staff should leave no doubt as to their competence to accept this assignment, since the primary obligation of the hospital must be for the patients' welfare.

For those applicants who have had their prior medical training in the United States or Canada, evaluation of qualifications is usually not difficult. Personality characteristics can be assessed through interview, letters of recommendations, and communication with the hospital where internship was served, and the dean's office of the medical school. The medical school accreditation and internship review programs of the Council on Medical Education of the American Medical Association renders reasonable assurance in regard to medical qualifications which can be augmented through communications with the hospital and school concerned. Such candidates for appointment should be graduates of approved schools. (See pertinent sections under Special Requirements.)

Since similar sources and kinds of information have not been readily available for graduates of foreign medical schools, the Educational Commission for Foreign Medical Graduates, 3624 Market St., Philadelphia, Pa., 19104, has been established to provide as comparable knowledge of qualifications as possible. The Council recommends that hospitals considering foreign medical school graduates for residency positions acquire reasonable assurance in regard to their medical qualifications through utilization of the program of the Educational Commission.

[Beyond July 1, 1961, no hospital should expect to maintain an approved residency program unless its appointees who are graduates of foreign medical schools either:

1. Have a full and unrestricted state license to practice, or
2. Have secured a standard certificate from ECFMG.
3. In the case of United States citizens, have successfully passed the complete licensure examination in any state or other licensing jurisdiction in which the law or regulations provide that a full and unrestricted license to practice medicine in that state or jurisdiction will be issued to the physician after satisfactory completion of his internship or residency in that state, without further examination.
4. In the case of students who have completed, in an accredited American College or university, undergraduate premedical work of the quality acceptable for matriculation in

an accredited U.S. medical school, have studied medicine at a medical school located outside the United States, Puerto Rico, or Canada but which is recognized by the World Health Organization, have completed all of the formal requirements of the foreign medical school except internship and/or social service, may substitute for an internship required by a foreign medical school, an academic year of supervised clinical training (such as a clinical clerkship or junior internship) on or after July 1, 1971, prior to entrance into the first year of AMA approved graduate medical education. The supervised clinical training must be under the direction of a medical school approved by the Liaison Committee on Medical Education. Before beginning the supervised clinical training, also known as the "Fifth Pathway," students must have their academic records reviewed and approved by the medical schools supervising their clinical training and must attain a score satisfactory to the sponsoring medical school on a screening examination acceptable to the Council on Medical Education.

After July 1, 1961, the Council will recommend to the Residency Review Committees the disapproval of those training programs whose rosters contain graduates of foreign medical schools who do not satisfy requirement 1, 2, or 3 above.

Even though a foreign medical graduate may possess a full and unrestricted state license, ECFMG certification may be necessary if he expects to be licensed in another state by reciprocity or endorsement; furthermore, such certification may be necessary as a requirement for qualification for specialty certification by the majority of American specialty boards.]

Graduates of schools of osteopathy who hold only the D.O. degree are eligible for appointment to residencies only in those specialties for which the corresponding specialty board has established conditions under which the D.O. will be acceptable to the Board for examination for certification. (Most, but not all, specialty boards have an established policy under which they will accept former Doctors of Osteopathy who now hold an M.D. degree from the University of California College of Medicine, Irvine.)

7. Training Program

Duration: Graduate training in the various branches of medicine should be of sufficient duration and educational content to enable the resident on completion of his training, to begin the practice of his specialty in a scientific manner. With the exception of a few specialties, e.g., pediatrics, a fully organized, comprehensive program should include three or more years of formal residency training. Not all hospitals, however, are able to develop programs of this type. A given approved residency may not provide complete training in a specialty field but if properly organized can make a substantial contribution to the resident's advanced training. It is desirable that hospitals, which cannot, for one reason or another, develop a fully approved program, integrate their training plan with that of other approved hospitals to assure the resident of the opportunity of completing his training, during which he is given progressively graded responsibility.

Part-Time Programs: While internship and residency programs have ordinarily been considered as full-time activities, there are particular circumstances under which physicians can undertake graduate medical education programs only on a part-time basis. It is highly desirable that these physicians be encouraged to proceed as far as possible with the necessary training to prepare them for licensure and medical practice.

It is incumbent upon the responsible program director to arrange a program which meets the educational needs of the trainee and at the same time includes in its total extent the sum of clinical experience and responsibilities acquired by a trainee on a normal schedule. Such a part-time plan must be fair to the other trainees and fully compatible with the hospital's training program and responsibilities in the care of patients.

The responsible program director must be prepared to justify to the appropriate review committee, as well as to state

boards of licensure and specialty boards, the manner in which the program will be arranged so as to provide the equivalent of a full-time appointment, and the manner in which the trainee's experience and responsibilities will be documented. Of great importance is documentation of the manner in which the trainee's patient-care responsibilities will be discharged during those periods off duty. If two half-time trainees were to assume responsibility for the care of the same group of patients, this would not be unlike the manner in which patient care is delivered in some private practice situations.

Supervision: The educational effectiveness of a residency depends largely on the quality of its supervision and organization. The responsibility for these important functions lies with the department heads and a representative committee of the medical staff. Heads of departments should be responsible for their own services, the committee assuming a larger role in directing and correlating the various aspects of the educational program. The department head should have qualifications and breadth of experience which will enable him to carry out an effective training program. Those members of the attending staff who assist in supervising the resident's work should also have had acceptable training in the specialty and should demonstrate an interest and ability in teaching. In some hospitals, where the number of men on the staff who have had advanced training in the specialty is limited, it may be desirable to assign responsibility for the supervision of the training program to physicians recognized in their field on a consulting basis. In such instance, it is expected that the consultant assuming this responsibility will devote sufficient time to the residency program to assure the close and continuing supervision of all phases of the resident's work.

Resident Responsibility: Aside from the daily contact with patients and the attending staff, and participation in the organized educational program, the assumption of responsibility is a most important aspect of residency training. Accordingly, as ability is demonstrated, an increasing amount of reliance should be placed in the judgment of residents in diagnosis and in treatment, as well as in the teaching of interns and medical students. In surgery and the surgical specialties, the resident should be given ample opportunity to perform major surgical procedures under supervision, particularly in the later stages of his training, in order that he may acquire surgical skill and judgment.

Methods of Instruction: It is important that methods of instruction be employed in the training program which are best suited to the special field. Emphasis should be placed on personal instruction at the bedside, in the operating room and in the delivery room, on related laboratory studies, teaching rounds, departmental conferences or seminars, clinical-pathological conferences, demonstrations and lectures.

Clinical-pathological conferences should be held preferable each week for the general staff, or in larger hospitals, it may be advisable to arrange separate meetings for each of several departments in order that all of the available material may be presented properly. The program should include the demonstration of pathological material from the operating room and from autopsies. The amount of material to be reviewed will usually require a weekly meeting and permit the more extensive use of the fresh and frozen specimens which are preferred to fixed specimens for demonstration and study. Details of the program and its manner of presentation may vary but the following procedure represents the plan followed in many hospitals:

- a. Presentation of abstract reports of selected cases.
- b. Demonstration of gross and microscopic pathology.
- c. Correlation of clinical and pathological findings.
- d. Comparison of reports with the literature.
- e. Summary of findings and conclusions.

The success of the clinical-pathological conference lies chiefly in the ability of the pathologist to teach and to interpret pathological lesions in terms of clinical manifestations of the disease.

A record of all conferences of the medical staff should be kept by every hospital for both current and future reference.

Journal Club: Familiarity with the critical analysis of pertinent medical literature is an important feature of medical training. The journal club or seminar is an excellent means of stimulating interest in scientific literature. In smaller hospitals, it may be conducted as a joint activity of several departments. Particularly in larger hospitals where the number of residents justify, separate meetings of this type for each service is considered advantageous. There are several methods of conducting a successful journal club. Each member of the resident staff can be requested to make a comprehensive review of the important articles contained in one or more current medical journals, reporting regularly at these meetings. The plan may be supplemented by assignment of a specific subject or disease entity to one or more of the participants for a complete review of the related past and current literature. Other plans for stimulating study of this nature may be arranged in conjunction with medical staff conferences, or through clinical research pertaining to problems under discussion, or in connection with patients under treatment in the hospital. A successful journal club will prove stimulating not only to the resident staff, but to the attending staff as well.

Resident Assignments, Hospital Service: The resident staff should be assigned to a sufficient number and variety of hospital patients to assure a broad training and experience. However, hospital duties should not be so extensive as to prevent giving ample time for other important phases of the training program. The completeness of the preliminary study of all patients, necessary in arriving at a correct diagnosis, should be emphasized. The variety of the pathological conditions encountered are also of primary importance.

Outpatient Department: The importance of the outpatient department and its role in the training of the resident staff should be emphasized. Here there is opportunity for acquiring further knowledge and experience, particularly in differential diagnosis and follow-up observation. Study of end results in patients operated upon is of primary importance. The resident staff should have a definite assignment to the scheduled clinics. They should be required either to attend all clinics of the hospital service to which they are assigned or, to devote full or part time to a series of clinics during a certain period of their training. The former plan is considered more satisfactory because it provides a longer contact with the same patients, including the periods before and after hospitalization. Other activities should not be allowed to conflict with the work of the resident staff in the outpatient department.

The major responsibilities of carrying on outpatient department work should not be given over entirely to the resident staff. The educational value of work in the outpatient department is largely dependent on the amount of interest displayed by heads of departments and high ranking members of the attending staff. In any acceptable plan of graduate training, they should be in regular attendance at the diagnostic and follow-up clinics for supervision and instruction of the assigned personnel working under their direction.

Emergency Service: All hospitals are called on to care for a certain number of patients who present themselves for treatment in case of accidents or other emergencies. The service may vary from a few patients seen in emergency in the outpatient department to the extensive and well organized accident wards which care for traumatic cases in connection with the ambulance services of larger hospitals. Regardless of the size of the service, advantage should be taken of this opportunity for the resident staff to obtain experience in the care of these types of cases. Being available in the hospital at all times, they may be called on to take the initiative in making differential diagnosis, rendering first aid treatment, and assuming the major responsibility for the immediate care of a variety of traumatic conditions. They must also decide when patients should be admitted to the hospital. Under proper

supervision of the attending staff, assignment to the emergency service is a valuable experience for the residents.

Operating Room Assignment: In surgery and the surgical specialties, work in the operating room constitutes an important part of the resident's responsibility. During the course of his training, the resident should be given sufficient operating responsibility to acquire surgical skill and judgment. This experience should be progressively graded to the end that, on completion of his training, the resident is able to assume individual responsibility for major surgical procedures. A more detailed discussion of this phase of the resident's training is found under the appropriate sections of the specialties concerned.

Teaching and Investigation: Residents should be assigned to teaching responsibilities as their experience increases. The stimulating teacher-student relationship should be part of the resident's experience, not only as a student of the attending physician, but as a teacher of interns and nurses and, in hospitals affiliated with medical schools, of junior and senior medical students.

When the facilities of an institution permit, and when the residents are competent and interested, they should be encouraged to engage in investigative work. Such investigation may take the form of research in the hospital laboratories or wards, comprehensive summaries of medical literature, or the preparation of statistical analyses based on clinical case records. The interest of the various members of the resident staff should be carefully considered when arranging assignments to this activity, inasmuch as ability and desire to do this type of work differ widely. Intelligent direction and supervision should be provided in selecting the project to be undertaken and in its development. It is realized that only an occasional individual will make contributions or discoveries of lasting value to the medical profession. However, those who undertake and pursue a research problem receive a stimulus which can be obtained in no other way. An understanding of the methods and problems involved in research leads to a better interpretation of the great mass of current scientific literature which must be constantly reviewed by the progressive physician or surgeon.

When feasible each member of the resident staff, either individually or in collaboration with other members of the department, should be encouraged to prepare a formal paper suitable for publication.

It is not essential, or even desirable, that all hospital residencies should adopt exactly the same program, or that they should offer a rigidly uniform sequence of experience. It is essential, however, that all hospitals participating in graduate training should be able to meet the fundamental essential requirements for an approved program and either alone or in collaboration should attain comparable results in the quality of training and amount of experience obtained.

Preparation for Practice: It is essential that the house officer before completing his period of formal graduate medical education in the hospital and its ambulatory facilities be exposed to the variety of methods by which he will apply his knowledge in the practice situation. If adequate models do not exist within the hospital environment, then a formal plan must be developed to expose the house officers to meaningful experience in health and medical service under a representative variety of patterns now developing throughout the nation. Inherent in this experience is an opportunity to become oriented to the social and economic aspects of medical practice. Preceptorial experience, seminars, or investigative projects on the relationship of medicine to the needs of society should be an essential part of the house officer's experience before he is considered to have completed his graduate medical education.

Special Requirements for Programs of International Educational Exchange in Medicine: In addition to the foregoing requirements for all residents, those programs which accept

graduates of foreign medical schools should contain certain special additional features which are essential to the effective education and training of such individuals.

(a) An orientation program for the foreign medical graduate should include thorough familiarization with patterns of American hospital and clinical practice, organizational responsibilities of hospital personnel, legal as well as moral and ethical concepts of physician-patient relationships, and the varying patterns of graduate medical education which lead to competence in practice.

(b) While the ECFMG resources described in Section 6, "Selection of Residents," are intended to provide reasonable assurance regarding the medical qualifications of foreign medical school graduates, many such individuals have deficits in background education and experience not ordinarily found in graduates of United States or Canadian medical schools. Special educational activities should be designed to correct these deficits in the area of professional medical knowledge, and in some cases in the use of the English language.

(c) Effective participation in the medical management of patients is impossible without an appropriate degree of appreciation by the foreign trained physicians of the cultural backgrounds of their patients. Such appreciation is unlikely to develop in the absence of carefully planned and conscientiously conducted programs of contact with a wide cross-section of American family life and of other non-medical activities characteristic of the American way of life.

(d) The countries of origin of foreign medical graduates have widely-varying needs for health and medical care, and the programs for individual foreign physicians should reflect an interest in those features of clinical practice most essential to the foreign physician upon return to his own country.

8. Collaborating and Affiliating Programs

Some hospitals that have excellent facilities and clinical material for the greater part of an approved training program may be deficient in some particular phase of the work that can be well provided in another hospital of graduate training caliber. In such instances the hospital which has the greater part of the required clinical material and facilities may become the parent institution and collaborate with the second institution to provide a well rounded and complete program of training in a given specialty.

In other instances, especially on university connected services, the chief of an approved service may elect to augment the opportunity afforded his trainees for clinical experience by rotating them to a smaller affiliated institution for short periods of service. Such short-term services need not be independently approved. However, their contribution to the resident's training is taken into consideration and recognized when evaluating the over-all program of which it is a part. The departmental staff of the parent institution sponsoring the program must assume responsibility for the resident's training during the period he is assigned to the affiliating service, as well as when he is serving at the parent hospital. Under arrangements of this nature, it is not intended that the resident be assigned to affiliating services without supervision even though he may obtain extensive experience in this way. The resident's work must be properly supervised at all stages of his training. In general, affiliated services should not constitute more than a third of the training period. Hospitals which can offer satisfactory training for more than this period can probably develop acceptable programs of their own.

9. Basic Science Training

Competence in any of the various specialties in clinical medicine requires a knowledge of the basic medical sciences as related to that specialty. Therefore, acceptable residency programs must provide for training in the applied basic medical sciences. Such training does not necessitate formal course work, specific assigned laboratory exercises, or affiliation of the residency hospital with a medical school: it should be distinctly of an applied nature, closely integrated with the clinical experience of the resident.

Any resident seeking competence or certification in a specialty must be able to apply at least the following basic sciences to his special field of medicine: anatomy, bacteriology, biochemistry, pathology, pharmacology, and physiology.

Undergraduate education in an approved medical school provides a background for an understanding of these sciences. In a graduate training program, therefore, training in basic sciences should stress reviews of their clinical application and not constitute primarily a review of undergraduate work.

Anatomy: Anatomy at the residency level may be taught, reviewed or learned from the living body, on the operating or examining table, or from the fresh tissues in the pathological laboratory. More important in anatomical instruction of residents than an available anatomical laboratory is the attitude and enthusiasm of the hospital staff in availing themselves of opportunities to teach and learn applied gross and microscopic anatomy from clinical and pathological material. Opportunities of anatomical dissection, when available, may be utilized for supplementary training.

Bacteriology: Hospital laboratories should have adequate facilities and personnel qualified to carry out diagnostic bacteriological studies, and those in the allied fields of parasitology, mycology, immunology, and serology. The resident staff should make use of the educational opportunity provided through the study of bacteriological material from the hospital services, correlating the laboratory study with its clinical application. Members of the resident staff who exhibit a particular interest in this field might well be assigned to the department for additional investigative work.

Biochemistry: The hospital biochemistry laboratory should provide the resident with opportunities to broaden his knowledge of biochemistry as related to such clinical problems he may encounter in his specialty; for example, water balance, acid-base equilibrium, glucose tolerance, and blood or urine levels of significant metabolic, nutritional, or therapeutic element. Such applied basic science work in biochemistry is far more valuable than a formal review course in the field.

Pathology: In a well conducted department of pathology of an approved hospital there is opportunity for correlating much basic medical science material with problems of clinical medicine. Applied gross and microscopic anatomy may be effectively learned from necropsy and surgical specimens. The clinical-pathological conference should and can be one of the most effective devices for correlation of the basic sciences with clinical medicine.

Pharmacology: Since the principles of pharmacology are involved in every therapeutic administration of chemical substances to patients, the wards of the residency hospitals provide very suitable opportunities for the resident to apply and expand the knowledge of pharmacology previously gained in medical school.

Physiology: Historically, one of the most fruitful fields of investigation into the normal functions of the body has been the study of abnormality of function to which the resident in clinical medicine is constantly exposed. Clinical medicine affords a rich field for the study of physiology and a potent stimulus to the resident to apply the basic principles of this science. Much of the equipment and special apparatus employed in clinical studies of the patient are likewise used in physiology, so that clinical studies provide ample opportunity and stimulation for the resident to supplement his knowledge of physiology with applications of the science to clinical problems. Encouragement and opportunity for an enlarged understanding of body function in health and disease should be part of the experience of the resident in any of the specialties in the course of his clinical work.

10. Hospital-Resident Agreement

A formal agreement in which mutual obligations are defined should be entered into between the hospital and the

applicant at the time of his appointment. This agreement must be honorably fulfilled by both parties and when terminated by mutual consent, the hospital should provide a statement of release from the agreement or contract. Contracts for one year, renewable by mutual consent, are preferable.

The Council urges that all inducements, representations, and agreements made with respect to the offer and acceptance of a residency be embodied in the terms of a written agreement which should specify at a minimum the following:

1. The term of the residency.
2. The salary.
3. The conditions under which living quarters, meals, and laundry or their equivalent are to be provided.
4. Whether the hospital will provide professional liability (malpractice) insurance for the resident, or whether he will be expected to provide such insurance at his own cost if he desires this coverage.
5. Whether the hospital will provide hospitalization and health insurance for the resident and his family.
6. Vacation periods.
7. Hours of duty, or the method by which this is to be determined.
8. The content of the educational phase of the residency, including duration and sequence of the specified assignments to clinical, laboratory or ambulatory care facilities.

The residency agreement imposes ethical, moral and legal obligations upon both the hospital and the resident. No residency should be terminated prior to its expiration date without the opportunity for both parties to discuss freely any differences or grievances that may exist.

Under particular circumstances, the hospital or the resident may be justified in terminating a residency prior to the expiration of its term. If the resident fails to perform the normal and customary services of a residency or fails to comply with the reasonable rules that are necessary in the orderly operation of the hospital, the hospital may be justified in taking such action. Likewise, a physician should be entitled to rely upon representations with respect to opportunity for educational experience, conditions of services, living quarters, agreed vacation periods, etc., that are made to induce him to apply for the residency.

A breach of the agreement by either a hospital or a resident is not condoned by the Council.

Whenever complaint of such a breach is made, it is the policy of the Council to ask each of the parties involved to submit an explanatory statement. Such statements become a part of the physician's and hospital's records, and are made available upon request to authorized agencies.

11. Employment Relations of House Officers

The primary purpose of intern and resident programs is professional education. Supervised service to patients is an essential part of intern and resident training, and it benefits both trainee and patient.

The accreditation process should include evidence that the employment agreements with interns and residents provide appropriate safeguards for the educational component of the program as follows:

1. There must be a mechanism for satisfactory intra-institutional communication between the governing board, the professional staff, and house officers with respect to service, research, and educational problems.
2. There must be a clearly-stated basis for annual reappointment. This must be based on evidence of progressive scholarship and professional growth of the trainee as demonstrated by his ability to assume graded and increasing responsibility for patient care. This determination is the responsibility of the program director, with advice from members of his teaching staff, and cannot be delegated to a professional or non-professional staff member who is primarily concerned with the service needs of the institution. A primary objective of the accreditation process is determination of the excellence

of the experience as an exercise in professional education. Since supervised service to patients is an essential part of intern and resident training, these aspects of the program as measured by satisfactory performance of service functions should be considered in determining continued tenure.

3. There must be an equitable and satisfactory mechanism, involving the participation of the medical staff, for the redress of grievances. Although final responsibility rests with the institution's governing body, the latter should rely upon the determinations of the medical staff in professional and educational matters.

It is inappropriate that house officers be expected to assume increasing responsibility for patient care, while not at the same time participating effectively in communications which contribute ultimately to policy-making decisions. The intern and resident must be integrated into the medical staff as true colleagues in order that effective programs of medical education and patient care be carried out.

II. PERSONAL RECORD

It is considered desirable that a personal record of the resident be maintained by the department responsible for his training. This should include a record of his assignments, results of examinations, personal evaluation by attending staff members who intimately supervise his work, and such detailed information as may be necessary in rating the resident's total accomplishment at the end of his training. The close personal contact which exists between department heads and resident staff is usually sufficient of itself to make possible an accurate evaluation of the resident's judgment and professional progress. All records relating to the resident's work in the hospitals should be preserved and should be made available to examining boards and other responsible agencies if requested.

III. MISCELLANEOUS

Intern-Resident Relationships: Those hospitals training both residents and interns should recognize their obligation to both groups and should plan their programs so that both interns and residents have opportunities for training and experience. The residents should participate in the teaching of the interns and in the supervision of their activities. Residents should not, however, act so as to diminish the contact of the interns with the attending men or assume the supervisory or disciplinary functions of the staff.

IV. RECORDING OF CREDIT

The successful completion of a residency is recorded in the biographic files of physicians maintained by the American Medical Association. It is important, therefore, that all institutions approved for residencies in specialties make an annual report to the Council on Medical Education of the American Medical Association. Periods of service in institutions approved by the Council for residencies in specialties are given full credit in the biographic files without further inquiry. Services in unapproved institutions are recorded as unclassified assignments.

There is an extensive interchange of information and close collaboration between the Council on Medical Education, the various American Boards responsible for the examination and certification of the specialists, and the American Board of Medical Specialties. In this way the study and appraisal of residencies leads to the formulation of lists approved by the Council and acceptable to the respective boards. These lists may be obtained from the Council on request. In most instances, there is indicated for the hospitals on the approved lists the amount of credit (one to three or more years) which is allowed by the appropriate American board toward qualifying for the certification examination.

The specialty boards listed below have been approved by the Council in collaboration with the American Board of Medical Specialties, through the Liaison Committee on Specialty Boards in accordance with the following resolutions of the House of Delegates:

Resolved, That the Council on Medical Education and Hospitals is hereby authorized to express its approval of such special examining boards as conform to the standards of administration formulated by the Council; and be it further

Resolved, That the Board of Trustees of the American Medical Association be urged to use the machinery of the American Medical Association, including the publication of its Directory, in furthering the work of such examining boards as may be accredited by the Council. (See the Council's "Essentials for Approval of Examining Boards in Medical Specialties.")

American Board of Allergy and Immunology
(a conjoint board of the American Board of Internal Medicine and the American Board of Pediatrics)

Herbert C. Mansmann, Jr., M.D., Executive Secretary
University City, 3624 Science Center
Philadelphia, PA 19104

American Board of Anesthesiology

E.S. Siker, M.D., Secretary-Treasurer
100 Constitution Plaza, Hartford, CT 06103

American Board of Colon and Rectal Surgery

Evanston, Ill. 60201

American Board of Radiology

C. Allen Good, M.D., Secretary
Kahler East, Rochester, MN 55901

American Board of Surgery

James W. Humphreys, Jr., M.D., Secretary-Treasurer
1617 John F. Kennedy Boulevard,
Philadelphia, PA 19103

American Board of Thoracic Surgery

Herbert Sloan, M.D., Secretary-Treasurer
14640 East Seven Mile Road, Detroit, MI 48205

American Board of Urology

J. Tate Mason, M.D., Executive Secretary
Harborview Medical Center, 325 9th Avenue,
Seattle, WA 98104

Certain of the boards certify physicians in subspecialties, as follows: Internal Medicine, in allergy, cardiovascular disease, gastroenterology, and pulmonary disease; Pediatrics, in allergy and cardiology; Psychiatry and Neurology, in child psychiatry. Candidates for certification in these special fields should communicate with the secretary of the American Board concerned; concerning the prerequisites.

The two conjoint Boards now approved (The American Board of Allergy and Immunology and the American Board of Nuclear Medicine) will certify physicians as specialists in the field indicated by their names, following the requisite training obtained in the primary fields of internal medicine or pediatrics, in the case of the American Board of Allergy and Immunology; and in the primary fields of internal medicine, radiology, or pathology in the case of the American Board of Nuclear Medicine.

Physicians who take hospital residencies and who anticipate certification by an American board should communicate with the secretary of the board at the outset of the residency training to be fully conversant with all the requirements.

V. ADMISSION TO THE ACCREDITED LIST

On January 1, 1975, The Liaison Committee on Graduate Medical Education, which has as its sponsoring bodies the American Medical Association, the American Board of Medical Specialties, the American Hospital Association, the Association of American Medical Colleges, and the Council of Medical Specialty Societies, assumed the responsibility for accreditation of programs in graduate medical education. The Residency Review Committees will continue their function of detailed review of specialty programs, based on the information provided by program directors, surveys by the Field Representatives of the Department of Graduate Medical Education of the American Medical Association, specialist site visits requested by the Residency Review Committees, and other pertinent information concerning the program.

Prior to the formation of the Liaison Committee on Graduate Medical Education, the American Medical Association bore most of the cost of assembling information and the survey of programs, as well as costs associated with the review and evaluation, notification, record keeping, and publication of the annual Directory of Approved Internships and Residencies. With the assumption of responsibility by the Liaison Committee on Graduate Medical Education (LCGME) for accreditation of residency programs, a fee of \$300¹ will be charged for the evaluation of each program for accreditation,

¹By action of the LCGME November 1979, the fee schedule was revised. For current fees please refer to page 3 of this Directory.

effective January 1, 1975. Details of methods of billing and of payment will be included with the application and survey forms forwarded to an institution or agency that has requested approval of its residency program, or at the time of the regular periodic review of a residency program.

Procedures for considering an institution for approval of a residency to offer training in a recognized specialty are as follows:

The institution should make application to the Liaison Committee on Graduate Medical Education, in care of the American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610. The staff of the Department of Graduate Medical Evaluation of the American Medical Association, which provides the secretariat for the Residency Review Committees, will provide application blanks and arrange to conduct a survey of the institution or institutions to determine whether the residency complies with the standards set forth in these "Essentials," including both the section on "General Requirements" and the section on "Special Requirements" pertaining to the residency for which application is made.

Individual Residency Review Committees, representing the Council on Medical Education of the American Medical Association, the specialty boards, and certain other national organizations, will review the programs and recommend to the LCGME the action to be taken, including for accredited programs the manner in which they should be listed in the Directory of Accredited Residencies, published annually.

As indicated elsewhere in these "Essentials," recognition may be withdrawn whenever the training program no longer conforms to the "Essentials," or when the positions in a residency remain vacant for a period of two or more years.

VI. SPECIAL REQUIREMENTS

The following regulations pertaining to individual specialties describe the special training in addition to the foregoing, required for competence in the practice of the various specialties of medicine and for admission to the examinations of the American boards in those specialties.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

1. Special Requirements for Residencies in Allergy and Immunology

The discipline of allergy and immunology reaches into a wide variety of clinical problems and is likely to become even more wide-ranging in the future. Therefore, rigid criteria for graduate medical education in this discipline are not appropriate. A variety of educational options can be approved if certain basic requirements are met. The objective of intensive education in allergy and immunology is to prepare the physician for the most effective practice, teaching, and research in the specialty. This preparation requires the acquisition of specialized knowledge and particular skills which will entitle the physician to be consulted and serve as an expert.

A graduate medical education program in allergy and immunology must offer a minimum of two years of full-time graduate medical education under competent supervision, after completion of primary education. In this connection, candidates for positions in programs offering specialized education in allergy and immunology should have fulfilled the basic requirements of at least one of the parent boards prior to undertaking the two year specialized program. Trainees should be given thorough training in the fundamentals of human and animal hypersensitivity through clinical studies and laboratory experiments. In both inpatient and outpatient settings, trainees should be given progressive responsibility for diagnosis and management of various disease entities of allergy and clinical immunology, as well as opportunities to gain experience in teaching the consultation as they demonstrate capabilities for such activities. The program should offer and encourage trainees to participate in clinical or laboratory

research in allergy and immunology as a means of developing special competencies and stimulating inquiring and critical attitudes.

The program director, although not necessarily full-time, should be able to develop close and continuous contacts with trainees, and be available to provide advice and instruction on a daily basis. The staff of the teaching program should be devoted to education and be adequate in number to provide immediate consultation to trainees when needed. The director and the staff should be recognized for proficiency in allergy and immunology and should demonstrate those special competencies in teaching and research needed to provide a valuable educational experience for all trainees.

Allergy and immunology programs should be offered only in institutions with approved graduate medical education programs in pediatrics and internal medicine, and should develop affiliations which ensure graduate education in the broad fields of both pediatric and adult allergy and immunology. Exceptions will be considered for innovative programs based in private clinics which demonstrate educational equivalency. The clinical allergy portion of the program should provide an adequate number and variety of ambulatory patients. Inpatient services should provide consultative opportunities sufficiently comprehensive to assure a broad experience in clinical immunology. The program should have full laboratory services available, including special methodology required in the field; for example, immunologic, physiologic, pharmacologic, pathologic, and bacteriologic techniques.

The provisions of the General Requirements must also be met for approval of the program.

2. Special Requirements for Residency Training in Anesthesiology

Objectives: An approved four year program in anesthesiology provides education, training and experience in an atmosphere of mutual respect between instructor and resident so that the resident will be stimulated and prepared to apply his acquired knowledge and talents independently. It is recognized that there are varying pathways to the development of a consultant anesthesiologist and the following requirements should be regarded as minimum standards for its accomplishment.

General Consideration for an Approved Four Year Program: The Residency Review Committee (RRC) for Anesthesiology and the Liaison Committee for Graduate Medical Education (LCGME) approve and accredit programs only in those institutions that possess the educational resources to provide at least two years of CLINICAL ANESTHESIA and the SPECIALIZED YEAR. At the present time capability to provide the CLINICAL BASE year within the same institution is highly desirable but not required for accreditation.

First Postgraduate Year (G-1): This year is called the CLINICAL BASE and its purpose is to provide the resident with twelve months of clinical education, other than that directly associated with the provision of anesthesia care. Acceptable content for the CLINICAL BASE year includes training in internal medicine, pediatrics, surgery or a surgical specialty, obstetrics and gynecology, neurology, family practice, or any combination of these as approved for the individual resident by the anesthesiology program director. The CLINICAL BASE year must be offered in a program accredited by the LCGME in the United States or by the Royal College of Physicians and Surgeons in Canada. If the CLINICAL BASE year is not spent in the parent or affiliated institution, the program director must document its educational quality.

Second and Third Postgraduate Years (G-2 and G-3): These two years are called CLINICAL ANESTHESIA. At least 20 of the 24 months involved must be concerned with (a) the management of procedures for rendering a patient insensible to pain during surgical, obstetric and certain other diagnostic and therapeutic procedures, and (b) the support of life functions under the stress of anesthesia and surgical manipulation.

Colon and Rectal Surgery

It is recommended that at least one of these 24 months be devoted to the supervised care of patients in a recovery room or special care unit.

Fourth Postgraduate Year (G-4): This year is called the **SPECIALIZED YEAR**. It is designed by the program director in consultation with each resident. It may be spent in areas such as research in anesthesiology, concentrated experience in specialized areas of clinical anesthesiology or experience in special intensive care units. Alternatively, the **SPECIALIZED YEAR** may be spent in a basic science endeavor related to anesthesiology or in a clinical discipline other than, but related to, anesthesiology. However the program is designed, the program director must assume responsibility for its organization and educational content and, if clinical, it must be spent in programs accredited by LCGME. It is recommended that this **SPECIALIZED YEAR**, if it encompasses more than one unrelated endeavor, be in segments of not less than six months each.

General Considerations for a Program Approved for One Year of Specialized Clinical Training: Certain hospitals by virtue of their specialized missions provide unusual facilities and clinical experience for specialized training in anesthesiology for residents who have completed **CLINICAL BASE** and the two years of **CLINICAL ANESTHESIA** in another program. Such hospitals are eligible for accreditation for one year of freestanding specialized training. To qualify, the educational experience offered must be substantially different from that which is generally available in the first three years of the continuum. Program directors may arrange to send their residents to such specialized programs for periods of not more than six months during the **CLINICAL ANESTHESIA** years if such specialized experience, e/g: pediatric, obstetric, cardiac, or neurologic anesthesia is required to supplement the opportunities available in their own program.

Faculty (Teaching Staff): The dedication of the teaching faculty to the instruction and education of residents and their own continuing education is critical. Teaching competence and motivation are vital to the continued effectiveness of a program. The faculty should be large enough so that a resident can receive adequate supervision at all times. The ratio of faculty to residents in clinical anesthesia is subject to many variables, but there should be sufficient teaching faculty available so that residents may have direct supervision at any time, especially during the administration of anesthesia. The use of a resident as an instructor of more junior residents is not a substitute for experienced faculty. The faculty should include individuals with varying interests, capabilities and backgrounds. Clinical and didactic teaching skills, clinical laboratory investigative abilities, and administrative talents should be among their qualifications. Faculty should be provided time to perform a variety of professional activities including committee responsibility within the program and the hospital community. The program director must be a competent teacher and leader who is capable of organizing and administering the program and be provided with the authority and resources to do so. The director's position should be predicated on prior experience in educational programs and on abilities to relate not only to personnel within the program but to other programs within the institution. An Educational Committee, a Clinical Competence Committee and procedures for peer review and due process for all members of the department must be included in the organization of the program.

Clinical Experience: Through the parent hospital and/or limited affiliated institutions adequate numbers of a broad spectrum of patient problems should be available to each resident so as to provide broad experience in the anesthetic management of patients undergoing all types of surgical procedures. Adequate exposure to specialized areas such as neurosurgical, pediatric, obstetric, and cardiothoracic procedures is essential. A specific number of anesthetics is not required in any category, but it is the responsibility of the program director to provide instruction and experience to

each resident. Such an educational program must be directed toward the production of a consultant capable of making sound judgments in the perioperative period. During the course of anesthesia and in the perioperative period, the resident must learn current monitoring procedures, fluid therapy and pain management. Residents should also receive instruction and experience in the management of acute and chronic pain including diagnostic and therapeutic nerve block, intensive care, management of resuscitation and airway problems and sedation in special circumstances.

Didactic Program: The manner in which the resident is taught is the prerogative of the program director and the faculty. However, it is believed that regularly scheduled teaching sessions should be held to supplement ongoing clinical instruction. The number and type of such sessions will vary among programs and may include morbidity-mortality conferences, didactic teaching sessions, seminars devoted to journal review and resident presentations. Organization of the teaching schedule should allow time for resident reading and study. Recent journals, reference books and other texts should be readily available to the residents and faculty. An adequate program should achieve a suitable balance between clinical experience, teaching sessions, independent study and informal discussions with the faculty. The aim is to provide a suitable climate for the development of a competent physician and consultant anesthesiologist. The didactic instruction provided for the resident should encompass anesthesiology and the basic, clinical and physical sciences as they relate to anesthesiology. The director should seek to enrich the program through the participation of faculty from the other disciplines and other institutions.

Research: An active program of clinical investigation and/or basic research contributes to a scholarly environment and to the educational stimulation of both residents and faculty.

Records: A comprehensive anesthesia record must be maintained for each patient as an ongoing reflection of the drugs administered, the monitoring employed, the techniques used, the physiologic variations observed, the therapy provided as required, and the fluids administered. The patient's medical record should contain evidence of pre and postoperative anesthesia assessment. When residents are participating in patient care outside of the operating room, they should be instructed in proper record keeping for the activity involved and their records reviewed by the faculty.

Residents who plan to seek certification by the American Board of Anesthesiology should communicate with the Secretary of the Board regarding specific requirements for certification.

Effective: Feb. 1979

LCGME: Feb. 1979

3. Special Requirements for Residency Training in Colon and Rectal Surgery

Institutions offering residencies in Colon and Rectal Surgery must provide the necessary education to qualify the resident as a colon and rectal specialist in the care of patients, in teaching, and in research. Surgeons admitted to each residencies are required to have completed a minimum of four years of an accredited, graded program in general surgery. Thus, the residents should already have developed a satisfactory level of clinical maturity, technical skills, and surgical judgment which will enable them to begin a residency in colon and rectal surgery for the purpose of specializing in this field of surgery. The period of training should be not less than one year and the program must comply with the General Requirements for Residency Training.

The residency program must be under the direction of a colon and rectal surgeon who is certified by the American Board of Colon and Rectal Surgery or possesses suitable equivalent qualifications. The Program Director must assume full responsibility for the teaching and work done in the

department or section. There should be a minimum of two staff members, including the Program Director, that have significant teaching responsibilities. Such staff members should have the necessary interest and ability to perform their teaching duties adequately.

The program should supply the necessary volume and variety of colon and rectal surgery to assure adequate training of residents. If there is insufficient volume or variety in the primary institutions, arrangements should be made for an affiliation in an accredited institution to correct the inadequacy. While it is not feasible to require specific numbers of operations or other procedures, it is suggested that each resident have appropriate responsibilities for 200 anorectal patients in addition to 50 patients having diseases of the colon and rectum requiring surgery.

The educational program must also include training in colonoscopy, both diagnostic and therapeutic. It is suggested that this experience include at least 50 diagnostic colonoscopies and 25 polypectomies. The objective is to develop the necessary competence in the use of this instrument to qualify as an expert in the field.

An important aspect of the educational program is training in an out-patient facility to develop skills in patient evaluation, examination, office treatment, and surgical aftercare. Where feasible, such training should include work in the Program Director's office, as well as in the out-patient clinic of the hospital.

Residents in colon and rectal surgery must have sufficient knowledge of those aspects of Anesthesiology, Radiology, and Pathology that relate to colon and rectal surgery to develop overall competence as a specialist. Such training is best accomplished in cooperation with the Department of Anesthesiology, Radiology, and Pathology.

Teaching contributes to the educational process, and therefore should be an important part of the training program. If possible, the resident should assist in the instruction of general surgical residents, medical students, and nurses. It is important to include instruction in the care of intestinal stomas, especially in institutions that do not have enterostomal therapists.

The trainee should be encouraged to do clinical investigative research and write a paper which should be submitted for presentation at a national scientific meeting and subsequent publication in an appropriate journal.

The residents activity outside the educational program should not be allowed to interfere with his or her performance in the educational process as defined in the agreement between the institution and the house officer.

Finally, those who plan to seek certification by the American Board of Colon and Rectal Surgery should communicate with the Secretary of the Board prior to beginning their residency to be certain that their general surgical training is approved.

Effective: Feb. 1980

LCGME: Feb. 1980

successfully carried out. An equally interested, enthusiastic, and competent faculty should be assembled to assist him and they should also devote sufficient time and effort to the program. It is essential that residents have access to training in the areas listed below. Faculty from departments other than dermatology can and should be utilized when needed to accomplish these objectives in dermatologic graduate training programs.

Training programs in dermatology may be accredited for two, three, or four years. Since the total length of postgraduate training in dermatology is four years, residents may be required to complete this training in one or more programs. It is preferred that one of the four years, usually the first, consists of broad based training such as may be provided by internal medicine, pediatrics, or surgery but training in other specialties may be acceptable. Three years are to be spent in training programs in dermatology and at least half of this time must involve the direct care of patients. Under special circumstances part of these three years may be spent in accredited programs in other fields of postgraduate medical education.

Residency training in dermatology requires a setting that will permit adequate exposure to both out-patients and in-patients. It should provide the opportunity to teach, to do basic or clinical research and to become acquainted with administrative aspects of the specialty. A suitable institutional environment and relationship to other disciplines in medicine are essential to the accomplishment of these activities.

At the clinical level, training should be provided in dermatology and appropriate aspects of other specialties that relate to dermatology, such as allergy and immunology, gynecology, internal medicine, obstetrics, ophthalmology, otolaryngology, pathology, pediatrics, physical medicine, preventive medicine, psychiatry, radiology and surgery. The keeping of complete and accurate clinical records should be emphasized throughout this training.

The residency program should include organized study in the various basic and clinical sciences related to dermatology, including allergy, anatomy, bacteriology, biochemistry, embryology, entomology, genetics, histology, immunology, mycology, parasitology, pathology, pharmacology, photobiology, physiology, serology, therapy by physical agents and virology. Particular emphasis should be placed upon dermatopathology and microbiology.

The trainees' educational experience should be sufficient to ensure a knowledge of and competence in the performance of procedures in allergy and immunology, cryotherapy, dermatologic surgery, dermatopathology, histology, microbiology, pathology, parasitology, photobiology, physiotherapy, radio-therapy and topical pharmacology.

Teaching methods throughout the training period should include various combinations of lectures, conferences, study of color transparencies and histologic slides, seminars, demonstrations, attendance at national, regional and local meetings, book and journal reviews, rounds, chart and record reviews, and faculty-resident sessions in small groups and in one to one settings. It is essential for residents to be supervised in caring for patients but also for them to assume increasing responsibility for patient care as they acquire the knowledge and skills for diagnosis and treatment of dermatologic diseases.

The practice of dermatology is concerned with both ambulatory and hospitalized patients. It is essential that an active outpatient service furnish sufficient clinical material representing the broad array of diseases seen by the dermatologist. Suitable facilities which permit the use of modern diagnostic and therapeutic techniques in the care of these patients should be provided. In-patient facilities are also essential so that residents may have the opportunity to treat the more serious cutaneous diseases on a daily basis and observe the dermatologic manifestations of systemic disease. A clinical laboratory with facilities for microscopic analysis of biologic specimens (e.g., fungal and ectoparasite scrapings,

4. Special Requirements for Residency Training in Dermatology

Residencies in dermatology should be designed to provide the education and training to fulfill the needs and requirements of a dermatologist. These needs and requirements are further explained in the Guide for Residency Programs in Dermatology.

The program director should be an enthusiastic, interested, competent dermatologist and administrator who must devote sufficient time and effort to the program to ensure that the administrative, teaching, patient care and research goals are

Family Practice

Tzanck preparations, immunofluorescence, dark-field examinations), culture for microbes (e.g., fungi, bacteria, viruses) and interpretation of histologic specimens by light, phase and electron microscopy should be available. Space and equipment should be provided for instruction in cutaneous surgery, electro-surgery, phototherapy, cryotherapy, application of topical medicaments and dressings, physiotherapy, radiotherapy and epicutaneous, intradermal and phototesting.

There should be a well-organized course of instruction in dermatopathology and microbiology. To facilitate clinical and laboratory teaching it is essential that the department have ready access to an adequate supply of properly classified anatomic and pathologic materials including histologic and lantern slides and that the resident participate actively in the interpretation of histopathologic sections. Projection equipment and facilities for viewing and taking clinical photographs should be provided. A library containing the essential texts, journals and other learning resources should be available to the faculty and residents.

The participation of faculty and residents in basic and applied research is encouraged and research facilities should be available in amount and type suitable to the aims of the program. Some of these research facilities can be in departments other than dermatology.

Periodic in-training evaluation of residents should be carried out to ensure that the resident is making satisfactory progress. Periodic internal analysis of the training program by the program director and faculty is encouraged in addition to the regular surveys performed by the Residency Review Committee for Dermatology.

Residents who plan to seek certification by the American Board of Dermatology should communicate with the secretary of this board, as listed in Section IV, to be certain regarding the full requirements for certification.

Effective: July 1979

LCGME: Sept. 1978

5. Special Requirements for Residency Training in Family Practice

Residencies in Family Practice¹ should be specifically designed to meet the educational needs of medical school graduates intending to become Family Physicians.²

¹The official definition of "Family Practice" adopted by the American Academy of Family Physicians Board of Directors and the American Board of Family Practice Board of Directors follows:

"Family Practice is comprehensive medical care with particular emphasis on the family unit, in which the physician's continuing responsibility for health care is not limited by the patient's age or sex nor by a particular organ system or disease entity."

"Family Practice is the specialty in breadth which builds upon a core of knowledge derived from other disciplines—drawing most heavily on internal medicine, pediatrics, obstetrics and gynecology, surgery and psychiatry—and which establishes a cohesive unit combining the behavioral sciences with the traditional biological and clinical sciences. The core of knowledge encompassed by the discipline of Family Practice prepares the Family Physician for a unique role in patient management, problem solving, counseling and as a personal physician who coordinates total health care delivery."

²The official definition of "Family Physician" adopted by the American Academy of Family Physicians Board of Directors follows:

"The Family Physician provides health care in the discipline of Family Practice. His training and experience qualify him to practice in the several fields of medicine and surgery."

"The Family Physician is educated and trained to develop and bring to bear in practice unique attitudes and skills which qualify him or her to provide continuing, comprehensive health maintenance and medical care to the entire family regardless of sex, age, or type of problem, be it biological, behavioral or social. This physician serves as the patient's or family's advocate in health-related matters, including the appropriate use of consultants and community resources."

Organization of Training

The Family Practice Residency is three years in duration after graduation from medical school and must be planned in a way that assures an integrated, meaningful, and coherent educational program.

Applicants who have had other types of previous training may be considered for admission to the Family Practice program. Credit for this previous training may be given only in the amount that is compatible with the "Essentials" of training in Family Practice. In these situations, the Director of the Family Practice Residency shall be responsible for insuring that each resident who completes the program shall have met the training requirements of the "Essentials" of an accredited program.

Experience in the continuity of care offered in the Family Practice Center is essential. Therefore, it is imperative that all programs offer three consecutive years of training. It is highly desirable that all residents have three consecutive years of training in a Family Practice Center of one institution.

However, certain circumstances may permit a resident to enter a program in advanced standing where the first year of training has been in Family Practice in another location, or where the first year of training has provided educational experience equivalent to that necessary for Family Practice. It is essential that a program provide the second and third years of training in one location, thus assuring the resident the opportunity of providing continuity of care to a given panel of patients. It is imperative that the Program Director encourage the resident to take the final two years in the same location.

As stated in the "General Requirements" of the "Essentials of Accredited Residencies," it is not necessary, or even desirable, that all residencies adopt exactly the same program, nor that they offer a rigidly uniform sequence of experience. Programs may be developed which can be regarded as experimental or pilot in nature. It is necessary, however, that all programs for graduate training in Family Practice be able to meet the minimal requirements of an accredited program. However, as stated in the "Essentials," programs may vary.

Family Practice residency programs must provide for experience and responsibility for each resident in those areas of medicine which will be of importance to the resident's future practice. Since Family Practice programs are in part dependent upon other specialties for the training of their residents, it is essential that the ability and commitment of the institution to fulfill these requirements be assured. Specifically, the sponsoring institutions must assure the existence and availability of those basic educational and patient care resources necessary to provide the Family Practice resident meaningful involvement and responsibility in the other major clinical specialties. Further, there must be agreement regarding the resident's need to maintain concurrent commitment to his patients in the Family Practice Center.

It is necessary that the Family Practice resident's identity be maintained throughout graduate training while learning the appropriate skills, techniques and procedures of other specialties. Instruction in the other specialties must be arranged and conducted by faculty with expertise in these fields. Curriculum and plans for such rotations should be developed in concert with the Family Practice faculty. Participation in other services should be jointly planned when the resident is serving on other specialty services so as to keep in view the principles and philosophical attitudes associated with Family Practice.

If a resident desires to emphasize one of the other specialties in his future Family Practice, he should obtain necessary additional training in those areas beyond that provided in his training for Family Practice.

Clearly formulated educational objectives must be delineated in addition to the time frames concerned with the different subjects. The achievement of a high level of competence by all residents must be the principal goal.

Content

The following covers the general content of training in Family Practice, and, as such, should be available to the

resident, although certain portions may be emphasized, depending upon the knowledge and skill of the resident, his interests, and the character of his anticipated practice. In all cases, continuing emphasis of the basic clinical sciences must be maintained. The "General Requirements" as outlined for all residency programs should be met as well as the special requirements that apply to Family Practice.

Family Medicine

The teaching of Family Practice takes place in the ambulatory facilities of the Family Practice Center and on the hospital inpatient services. The experience should be designed so that the resident maintains continuing patient responsibility when his patients from the Family Practice Center require hospitalization.

The patient composition of the whole Family Practice service should be a stable one in order to insure continuity of experience for the resident. A patient population seeking only episodic care does not meet this requirement. Patients who provide a broad spectrum of problems and represent varied income levels should be included, attended and managed either in the hospital, the Family Practice Center, at home or in institutions for long-term care or rehabilitation. Training also must include emergency room care as well as a large component devoted to health maintenance and preventive health care in order to provide for the entire range of needs of the patient and the family.

A major requirement for the training of Family Practice residents is a Family Practice Center. This should be designed in a way that will clearly identify and keep separate the special features of a family physician's office.

Residents may spend time away from the Family Practice Center if necessary to meet the needs of their training. Such outside rotations which interrupt the continuity of the resident's patients care responsibilities in the Family Practice Center must not exceed a total of two months per year in either of the last two years. After two months of such rotation, the resident must return to the Family Practice Center for a minimum of two months before participating in another outside rotation. The educational value of these rotations must be clearly documented. The availability of constant on-site supervision is required.

Internal Medicine

Internal medicine is a major component of programs in Family Practice. The resident must receive sufficient instruction and experience in this field that he can exercise sound judgment in assessing the condition of the patient, in the use and interpretation of laboratory and other special studies and in differential diagnosis.

Emphasis should be placed upon the basic mechanisms of disease, and the resident must have the opportunity to become competent in the management of the major disorders he is apt to encounter in this field.

Pediatrics

The special contributions of pediatrics are needed, and relate to understanding the growth and development of the newborn through adolescence, to emotional problems and their management, and to training of the resident in the recognition and management of behavioral, medical, and surgical problems of children and adolescents in home, ambulatory, and hospital settings. Modern pediatrics includes a large component of preventive medicine and emphasizes the care of ambulatory patients and of patients in their homes.

Psychiatry and Behavioral Sciences

The behavioral sciences and psychiatry are essential components of a Family Practice education program and must be available in a continuum throughout the training years. The behavioral aspects of patients with disease, medical practice relationships and community life shall be emphasized in all phases of the training program. The diagnosis and management of behavioral and emotional disorders must be taught as well as counseling techniques and the principles of their treatment. The Family Practice resident must understand the

importance of communication and interaction within the families under his care.

The resident is expected to develop competence in the management of common psychological and behavioral problems and must have enough exposure to recognize stages of stress in the family life cycle.

In Family Practice training, most of his knowledge and skill is best acquired through a program in which psychiatry and behavioral sciences are integrated with medicine, pediatrics and the other disciplines throughout the resident's entire educational experience.

The resident must have an opportunity to work in a psychiatric service or treatment center where patients with acute problems are treated. Limitation of the resident's experience in psychiatry to chronic, long-term psychotic patients is not acceptable, although experience with such patients is desirable to enable the resident to appreciate and recognize major psychoses.

Obstetrics and Gynecology

The resident shall be provided the instructions necessary to understand the biological and psychological impact of pregnancy, delivery and care of the newborn upon a woman and her family. The resident shall acquire technical skills in the provision of antepartum and postpartum care and the normal delivery process. The resident should also have an understanding of the complications of pregnancy and their management. The resident shall be taught certain operative skills in obstetrical and gynecological procedures as a part of a broadly-based curriculum. To obtain such skills requires a structured obstetric-gynecologic educational program.

Marriage counseling, sex education and family planning are important areas of responsibility for the Family Physician and the training program should afford an opportunity for the acquisition of skills in these areas. Additional training in the management of the more complicated high risk obstetrical patients should be arranged for those residents who wish to assume this kind of responsibility in the future.

Surgery

The resident should acquire competence in the recognition and management of surgical emergencies and when referral of them for specialized care is appropriate. He should also be able to recognize conditions that preferably may be managed on an elective basis.

It is important for him to appreciate the kinds of surgical treatments that might be employed for his patients as well as the problems that might arise from them. Knowledge of these matters enables him to give proper advice, explanation, and emotional support to his patients.

He should be trained in basic surgical principles, and acquire the technical proficiency required for those surgical procedures a Family Physician may be called upon to perform. If he expects to include surgery as a major aspect of his regular practice, he must obtain additional training.

Community Medicine

Community medicine is one of the important components of Family Practice. The teaching of this subject should be integrated throughout the entire program and not necessarily be given separate block time. The resident should understand the principles of epidemiology, environmental health, the health resources of the community and its organization for health. He should understand the roles and interrelationships of persons in various professional and technical disciplines which provide health services.

The resident should be provided with an understanding of community medicine resources with an approach to the evaluation of health problems and needs of a community. The experience should help the resident to understand the role of private enterprise, voluntary organizations, and government in modern health care.

Other Disciplines

All Family Practice residents must obtain a useful experi-

General Surgery

ence in dermatology, neurology, ophthalmology, otolaryngology and orthopedics. Training in these disciplines is advised for the second and third years. Experience in urology and diagnostic radiology is strongly recommended. Training in cardiopulmonary resuscitation, emergency airway procedures and other emergency life saving procedures is required. Training in the administration of anesthetics may be desirable for some residents.

Electives

Electives which are well constructed, purposeful, and effective learning experiences are an essential part of a Family Practice residency program. Most electives will be concerned with sub-specialized areas of the major primary specialties and may be obtained in various ways.

Research

The participation of the resident in an active research program should be encouraged. Generally, this activity should be concurrent with other assignments, provided the responsibilities of the resident are adjusted in a way to permit a reasonable time for research activity. Studies relating to the problems of delivery of health care relevant to Family Practice may be included as an integral part of the regular assignments. Independent research by the resident should be in addition to, rather than in lieu of, clinical instructions.

For those residents desirous of additional skills in one or more particular fields, training beyond the third year is encouraged.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by the American Board of Family Practice should communicate with the Secretary of the Board as listed in Section IV.

Effective: Feb. 1979

LCGME: Feb. 1978

6. Special Requirements for Residency Training in General Surgery

General Characteristics of Accredited Programs: Residencies in surgery which are designed to meet the requirements of the Council on Medical Education of the AMA, the American College of Surgeons and the American Board of Surgery should provide education in the basic biologic phenomena which constitute the foundations of surgical practice and an increasing degree of responsibility for and experience in the application of these principles to the management of clinical entities. Adequate opportunity must be provided for the trainee, under guidance and supervision of a qualified teaching staff, to develop a satisfactory level of clinical maturity, surgical judgment, and technical skill which will, upon completion of the program, render him fit for the safe and independent practice of surgery.

The basic areas of education should include, but not be limited to, wound healing; hemostasis and blood disorders; immunobiology; oncology and transplantation; shock; circulatory physiology; surgical bacteriology; muscle and bone mechanics and physiology; respiratory physiology; genitourinary physiology; gastrointestinal physiology; surgical endocrinology; surgical nutrition; fluid and electrolyte balance; metabolic response to injury; applied surgical anatomy; and surgical pathology.

The trainees must be provided with the opportunity for direct and responsible patient management experience so that they may attain detailed knowledge of congenital, degenerative, neoplastic, infective, and other surgical diseases of the gastrointestinal tract, of abdominal conditions, of the breast, of the head and neck, of the peripheral vascular system, of the endocrine system, and of the surgical management of trauma including musculoskeletal and head injuries. The above are considered to be the primary components of General Surgery. In addition they must gain an adequate understanding of the principles of and experience in the

management of more common problems in cardiothoracic, gynecologic, neurologic, orthopaedic, plastic, pediatric and urologic surgery.

Programs of graduate education in surgery must be so constructed that there is a clear demonstration by the trainee of competence in basic surgical knowledge prior to progression to the level of supervised, semi-independent patient management and operative experience. A further demonstration of competence in clinical surgery prior to completion of the program is required. Any program which does not establish a system of trainee evaluation which clearly demonstrates that each trainee has or has not successfully passed each of the milestones mentioned above, cannot be considered to be an adequate program. The American Board of Surgery in-training examination is an example of an acceptable test mechanism.

It is urged that the performance of each house officer be reviewed by the teaching staff each six months and that a documented record of his performance be prepared and retained for review by appropriate accrediting and credentialing bodies. It is suggested that comments be included from other departments or services involved in his training.

A satisfactory training program cannot be conducted in the absence of programs in other disciplines in the same institution. An absolute minimum is an approved program in a *primary care specialty*, but programs in pathology, radiology, and other surgical specialties are highly desirable.

It is strongly recommended that, in order to insure the proper relationship of basic sciences and other clinical disciplines to surgery, a program be conducted in those institutions having a training committee advising and appraising all programs. Where possible, the committee should be composed of representatives speaking for surgery, internal medicine, radiology, anatomy, and both clinical and anatomic pathology.

Duration and Scope of Training: The exact amount of time required for acquisition of the necessary knowledge, judgment and technical skill cannot be specified for all, but experience has demonstrated that in most instances five years post medical school is the minimum required. It is recognized that under exceptional educational circumstances, a minimum four-year program may be acceptable.

The minimally acceptable program must provide at least four years of clinical experience after graduation from medical school. Of these four years at least three and one-half years must be devoted to clinical surgery, three of which, including the final or Chief Resident year, must be in those fields designated as the primary components of "General" Surgery. No more than six months of the three and one-half years may be spent in any one surgical specialty other than general surgery. The remaining six months of the four clinical years may be devoted to either clinical surgery or to one of the other clinical disciplines such as Internal Medicine, Pediatrics, Anesthesiology or to Surgical Pathology. Any additional full-time assignments, other than surgical, such as research, radiology, etc., must be in addition to the four years.

A program of five or more years duration must include at least four years of clinical experience, three and one-half of which must be in clinical surgery. Three of those years, including the final Chief Resident year, must be devoted to the primary components of general surgery. In a five-year program, no more than one year may be spent in any single surgical specialty other than General Surgery. Assignments may be made to research, basic sciences or other electives provided the basic requirements above are met.

Assignments for education in other specialty fields of surgery should be arranged in each program according to local conditions so as to provide the broadest and most effective training possible for general surgeons.

Staff: The staff responsible for the direction and execution of the program must be well qualified and diversified so as to represent the many facets of surgery. The program director should be an institutionally based, highly qualified, preferably

certified, dedicated surgeon who is responsible for the work done in the department and for the teaching activities.

There should be at least one individual primarily involved in the administration and supervision of the program, and in carrying out his responsibility, the director of the program should have an equally qualified surgeon to supervise no more than three residents at the senior level when there are more than three senior residents in the program.

It is essential that key staff members have a real interest in teaching, be willing to give the necessary time and effort to the educational program and be engaged in scholarly activities such as (1) participation in regional or national scientific societies; (2) participation in their own continuing surgical education; (3) engage in scientific publications and presentations; and (4) show active interest in research as it pertains to their specialty. A staff which does not exhibit such characteristics will be cause for grave concern as to its adequacy and suitability for conducting a program of graduate surgical education.

The staff must be organized and at least the key members should be appointed for duration long enough to insure adequate continuity in the supervision of the house staff. Persons elected or appointed for short durations in an "honorary" capacity cannot be considered adequate to serve as program directors or key teaching staff.

Patient Population: An institution, to be approved to conduct graduate education in surgery, must be able to provide an adequate number and variety of surgical patients for which the resident has appropriate responsibility.

It is not sufficient that the house staff be involved only with those patients in the hospital, but an adequate outpatient clinic or service in which patients may be seen preadmission and in follow-up is considered necessary.

Institutions which cannot provide totally adequate material within their walls should seek other hospitals, perhaps those which limit their clientele to special type cases, to become "affiliates" of the program or even to join as integral parts of the parent program. Such affiliations must be approved by the Residency Review Committee for Surgery.

Special Information: Graduate education in surgery must be a continuum with undergraduate education. Therefore, the first post M.D. year should be an integral part of the process. Internships either "Categorical" or "Flexible" are not required, but if offered should be part of the continuum.

Broad training in general surgery is recommended as a preliminary to graduate education in most special fields of surgery. For some surgical specialties a definite amount of preliminary training in general surgery is required. This type of preliminary surgical education should be obtained in the regular accredited general surgical programs, the duration and content being determined by the program director in accordance with the requirements of the Specialty Board concerned.

As stated in the General Requirements for Residencies, it is not essential, or even desirable, that all institutions adopt exactly the same program content and structure, but it is essential that all institutions participating in graduate education be able to meet the requirements for accreditation and either alone or in collaboration with other institutions, attain comparable results in the quality of education and experience obtained.

One measurement of the quality of a program is the performance of its graduates in the examinations of the American Board of Surgery.

The provisions of the General Requirements must also be met for approval.

Note: Residents who plan to seek Certification by an American Board in Surgery should communicate with the Secretary of the appropriate Board, as listed in Section IV, to obtain the full requirements for Certification.

Training Programs in Pediatric Surgery

General Characteristics of Approved Programs: Graduate programs in Pediatric Surgery should be designed to provide education in the principles of pediatric surgical practice.

There must be a clear demonstration by the trainee of competence in basic surgical knowledge prior to progression to the senior year level of supervised and semi-independent patient management and operative experience. Demonstration of competence in Clinical Pediatric Surgery prior to completion of the program is required. Any program which does not establish an effective system of in-training evaluation cannot be considered to be adequate.

It is urged that the performance of each house officer be reviewed by the teaching staff at six month intervals and that a documented record of his performance be prepared and retained for review by appropriate accrediting and credentialing bodies. It is suggested that comments be included from other departments or services involved in his training.

It is strongly recommended that, in order to insure the proper relationship of basic sciences and other clinical disciplines to surgery the program be conducted in those institutions having a training committee advising and appraising all of its programs. Where possible, the committee should be composed of representatives speaking for Pediatric Surgery, Pediatrics, Radiology, Pathology and Infectious Disease.

Duration of Training: At least two years of specialized training in Pediatric Surgery must be acquired in addition to the training required for qualification in General Surgery. Eighteen months of the two years must be devoted to Clinical Pediatric Surgery including the surgical specialties. Twelve months of this clinical training must be at the "Senior or Chief" Pediatric Surgical Resident level with a high degree of responsibility for patient management and operative experience. The remaining six months of the two years may be devoted to Clinical Pediatric Surgery or related disciplines or may be allocated to research.

Rotations of not more than three months of the total required twenty-four may be made to other institutions at the discretion of the Program Director. Rotations outside the parent program in excess of three months and not to exceed six months may be made only with the approval of the Residency Review Committee for Surgery. Assignment of residents outside the parent institution for periods of greater than six months, requires that the participating institution(s) receive prior approval of the Residency Review Committee for Surgery as "Affiliates" of the parent program.

Scope of Training: The trainees must be provided with the opportunity for direct and responsible patient management experience so that they may attain detailed knowledge of congenital, neoplastic, infective and traumatic conditions of the gastrointestinal system and other abdominal organs; of the blood and vascular system; of the integument; of the respiratory system; of the endocrine glands; in gynecology; and of the head and neck. The trainee must gain an adequate understanding of the principles of and experience in the management of musculoskeletal trauma; of head injuries; and of the more common problems in cardiothoracic, neurologic, orthopedic, plastic and urologic surgery in the pediatric age group.

It is expected that every trainee will have previously acquired adequate knowledge in the fundamental areas specified for general surgery. Additional education should be provided by the pediatric surgery program to include, but not be limited to, embryology; genetics; wound healing; hemostasis and blood disorders; immunobiology; oncology; transplantation; shock; circulatory physiology; muscle and bone mechanics and physiology; respiratory physiology; gastrointestinal physiology; genitourinary physiology; surgical bacteriology; surgical endocrinology; surgical nutrition; fluid and electrolyte balance; metabolic response to injury; applied surgical anatomy; pediatric pathology and antibiotic therapy as pertaining to the pediatric age group.

Surgical Staff: The staff which is responsible for the direction and execution of the pediatric surgical program must be well qualified and diversified so as to represent the many facets of Pediatric Surgery. The staff should be composed of qualified surgeons under the direction of a Chief of Service or

Internal Medicine

Training Director who is institutionally based and certified by the American Board of Surgery as having "Special Competence in Pediatric Surgery." There should be at least one individual spending full time in the supervision and administration of the program regardless of the number of trainees.

It is essential that key staff members have a real interest in teaching, be willing to give the necessary time and effort to the educational program and be engaged in scholarly activities such as (1) participation in appropriate regional or national scientific societies; (2) participation in their own continuing pediatric surgical education; (3) engage in scientific publications and presentations; and (4) show an active interest in research as it pertains to pediatric surgery. A staff which does not exhibit such characteristics will be cause of grave concern as to its adequacy and suitability for conducting a program of graduate pediatric surgical education.

The staff must be organized and at least the key members should be appointed for durations long enough to insure adequate continuity in the supervision of house staff. Persons elected or appointed for short durations in an "honorary" capacity cannot be considered adequate to serve as program directors or key teaching staff.

The Institution: An institution to have an approved pediatric surgical program must meet all requirements specified in the "General Essentials." In addition it must have intensive care facilities for the pediatric age group; a pediatric emergency facility; designated pediatric surgical beds; and pediatric anesthesiology capability. The institution should have a burn unit; inhalation therapy services; and social and physical medicine services. There should also be nuclear medicine support and the capability to carry out microanalytic determinations.

The Training Program: An acceptable program in Pediatric Surgery should include but not be limited to, the following structural educational activities on a regular basis: (1) proper emphasis on teaching rounds and bedside teaching; (2) supervision of residents' operative experience; (3) grand rounds; (4) weekly teaching conferences; (5) morbidity and mortality conferences; (6) chief of service rounds; and (7) other pertinent clinical conferences such as pediatric radiology, pediatric pathology and tumor board, etc.

Patient Volume: To be approved for training in Pediatric Surgery, an institution must provide an adequate number and variety of pediatric surgical patients. Arbitrary figures cannot reflect these conditions accurately, however, under usual circumstances, the general pediatric surgical service should perform at least 750 operations per year. The senior resident must be provided with a broad and varied experience. It is expected that he will be the responsible surgeon for at least 120 major pediatric surgical operations during his senior year.

Special Information: As stated in the General Requirements for Residencies, it is not essential, or even desirable, that all institutions adopt exactly the same program content and structure. It is essential that all institutions participating in graduate education in pediatric surgery be able to meet the requirements for approval and either alone or in collaboration with other institutions, attain comparable results in the quality of education and experience obtained.

An important measurement of the quality of a program is the performance of its graduates on the examinations of the American Board of Surgery for Special Competence in Pediatric Surgery.

NOTE: All questions concerning the examination, or Certification for Special Competence in Pediatric Surgery should be addressed to The Secretary, American Board of Surgery, Inc.

7. Special Requirements for Residency Training in Internal Medicine

Residencies should be organized to provide experience in the broad field of internal medicine and those ancillary areas necessary for its function as a primary care specialty. The major criterion for an acceptable residency program in inter-

nal medicine is the provision of a well supervised, progressive educational experience of not less than three years duration. Such programs must provide an intellectual environment for properly teaching and learning skills and attitudes which are essential to the practice of internal medicine. The social and economic impact of disease on the patient and society as well as the efficient delivery of superior cost-effective medical care should be emphasized. These objectives can be achieved only when the leadership, the attending staff and the administration are committed to the educational program and when the proper resources and facilities are present. The objectives cannot be achieved when the residency functions primarily as a service oriented activity.

Although rigid criteria for graduate medical education are not desirable, certain specific factors are essential to the success of a program. These are discussed below:

1. Administration: The administration of the sponsoring institution(s) should be understanding of and sympathetic to the attainment of educational goals and should evidence the willingness and ability to support these goals philosophically and financially. Additionally, the administrative structure must be such that the program director has adequate authority to organize and oversee the activities of the educational program.

2. Faculty: (A) The Program Director: The program director is responsible for the quality of both patient care and teaching in the program. The strength of the medical service is directly related to the professional competence and leadership qualities of the program director, whose tenure should be such as to insure continuity for the program. The program director may be on a full-time or part-time basis, but must be willing and able to spend the many hours required to organize, supervise and implement a good training program. An increasing number of institutions are finding a full-time chief of service and program director to be a major asset to the training program. If there is a change in program directors, the Residency Review Committee for Internal Medicine must be notified in writing immediately.

(B) Section Heads: Both general medical and subspecialty sections should be well organized under the direction of qualified physicians. As with program directors, such section heads and other key professional personnel in the department must have adequate clinical training and teaching experience, must participate actively in appropriate scientific societies, must keep up-to-date through their own continuing medical education and must exhibit active interest in medical research related to their specialty. It is essential that they be able to develop in the resident the attitude of the scholar, scientist, teacher and humanist. Additionally, it is their responsibility to develop in the resident clinical judgment and technical skills as well as medical knowledge. Finally, they must assure the resident's acquisition of proficiency in interpersonal relationships and in the organization and management of patient care. As with program directors, section heads may be on a full-time or part-time basis, but an increasing number of institutions are finding full-time section heads to be a major asset to the training program.

(C) Teaching Staff: Physicians assigned to the teaching service should be appropriately qualified internists by talent, training and professional experience to discharge assigned responsibilities. They should be committed to the purposes and goals of the teaching program. These physicians must be willing to accept the principle of meaningful patient responsibility for residents in training. They should assist the program director and section heads in the education and development of the resident as described above.

3. Clinical Resources: (A) Patient Population: The patients encountered during the period of residency training must be of sufficient number and exhibit a sufficient variety of clinical problems to provide broad experience for the resident. The patient population should incorporate adequate numbers of patients of both sexes and a wide spectrum of ages, including those in the adolescent and geriatric age groups.

(B) *Areas of Observation:* Patients should be seen not only in the in-hospital environment and critical care areas but also in emergency departments and in the ambulatory setting. A geographic concentration of patients assigned to a given resident is highly desirable; it promotes effective teaching and fosters meaningful interaction with allied health personnel.

4. *Facilities:* (A) *The Physical Plant:* The physical plant should be planned and constructed to assure proper medical care as well as safety and comfort for the patient. There must be adequate space and equipment for up-to-date diagnosis and therapy. Additionally, there must be adequate space and equipment for the educational program, including appropriate meeting rooms and classrooms with visual and other educational aids.

(B) *Medical Records:* The Medical Records Department should be supervised by a qualified medical record librarian. Clinical records must be readily available and should be comprehensive and organized. Effective indices should permit the collection and evaluation of selected material from clinical records.

(C) *The Medical Library:* The medical library should be located in the institution in such a way that it is readily accessible to the resident staff. There must be a means of access during those times when the library is not open and staffed. The library should contain a representative selection of books and journals on internal medicine, such as the selection listed in the Library for Internists prepared by the American College of Physicians and published periodically in the Annals of Internal Medicine. Where appropriate, there should be an interlibrary loan system through the facilities of a nearby resource or regional medical library such as a medical school or national library. An Index Medicus should be present for reference use in locating medical literature. In addition to books and journals, a library of pertinent audio-tapes, videotapes and films together with the equipment necessary for their use is desirable.

5. *Supporting Services:* The pathologic laboratories, both clinical and anatomic, the radiologic laboratories and other diagnostic laboratories in the hospital are important parts of the residency program. Each should be headed by qualified individuals. Such individuals should not only assure the quality of work done in their section by adequate personal supervision but also be willing and able to participate in educational exercises of the medical services as well as of their own department or section. The quality of these services, the interest and teaching ability of their staffs, and the degree to which they are correlated with clinical medicine are integral to the medical program.

Autopsies should be performed whenever possible. They must be of sufficient number to provide an adequate educational experience and to assure the quality of patient care. Autopsies are needed for unresolved diagnostic problems and may well answer questions even in those instances where a definite diagnosis has been made antemortem. The carefully performed autopsy contributes significantly to the clinical acumen of the resident. Residents should be present at autopsies performed on their patients. It is most important that clinical and/or mortality conferences based upon autopsy data be held regularly.

6. *Consultative Services:* Adequate consultations from other clinical services must be available. These contribute significantly to the intellectual environment.

7. *Other Graduate Educational Programs:* Additional residency programs should be present. These additional programs permit increased peer interchange and augment the breadth of the educational experience.

8. *The Curriculum and the Teaching Program:* (A) *General Principles:* Inasmuch as the ability to care for the whole patient is one of the distinguishing characteristics of the internist, ample opportunity for education in the broad field of internal medicine must be provided. This experience is fostered by rotations on general medical services, both in-patient and out-patient, with exposure to a wide spectrum of disease.

In most instances, such in-patient rotations should be of at least six weeks duration.

Emphasis should be placed on the maintenance of health and on the study of etiology, pathogenesis, clinical presentation and course of various diseases so that the resident may develop skill in diagnosis as well as mature judgment and resourcefulness in therapy. The importance of taking and recording a thorough medical history and performing a careful and complete physical examination cannot be over-emphasized. Such examinations and medical records must be carefully supervised. Neglect of these fundamentals in favor of supplementary information supplied by a multiplicity of clinical laboratory and radiological procedures cannot be accepted.

Peer contact and discussion is as important to the learning process as contact with teaching faculty. There must be enough medical residents in the program to provide for frequent and meaningful discussions as well as appropriate coverage for adequate patient care. As a minimum it is suggested that there be a total of six, with two in each year of training.

The patient load for each first year resident should be such as to allow time for close and effective management and detailed study of patients and yet challenge the resident to be busy with diverse and complex problems. Generally speaking, a first year resident should be responsible for ten to fifteen patients, depending upon the average length of stay and the nature and severity of the illness. A lower number may be appropriate in critical and intensive care situations. Second and third year residents may be involved in the care of substantially more patients than a first year resident.

It is important that each resident have the opportunity to follow patients on a long-term basis, to observe and learn the natural course of disease. Such long-term observations should include following patients from the ambulatory to the in-patient environment as well as from the in-patient to the ambulatory environment.

(B) *Specific Experience: (1) Subspecialty Experience:* Education in the various subspecialty divisions of Internal Medicine is a vital part of the training program. These include allergy and immunology, cardiology, endocrinology and metabolism, gastroenterology, hematology, infectious diseases, nephrology, oncology, pulmonary diseases, and rheumatology. Most rotations on these subspecialties should be of at least six weeks duration. Although it is not necessary that each resident rotate through all of these subspecialties, it is important that there be exposure to the specialized knowledge and methods of a sufficient number of the recognized medical subspecialties to gain experience with their contributions to the effective care of patients. Vital to the success of subspecialty activity are well qualified subspecialists with an interest in teaching who devote sufficient time to all aspects of the service. They should have adequate assistance by well-trained colleagues and access to appropriate clinical laboratories. Not every hospital with an approved medical residency must or will have special laboratories for each of the subspecialties mentioned; it is essential, however, that the resident be exposed to patient care utilizing such subspecialty support. This may be accomplished by the sharing of facilities among departments or cooperating institutions.

(2) *Experience in Other Specialties:* To achieve breadth of competence, there should be available experience in areas related to internal medicine, such as neurology, psychiatry and dermatology; also medical ophthalmology, otorhinolaryngology, non-operative orthopedics and office gynecology. Most of this experience may be obtained in an ambulatory setting.

(3) *Consultative Experience:* Crucial to the complete internist is his ability to act as a consultant to other physicians. The resident's experience should include the opportunity to act with appropriate supervision as consultant to other clinical services. This requirement may be satisfied either by a specific assignment as medical consultant to other services or as a part of the responsibility while on subspecialty rotations.

Internal Medicine

(4) *Experience With Ambulatory Patients:* Residency programs must offer adequate experience in the ambulatory setting. Such additional experience permits greater appreciation of the natural history of disease and greater familiarity with the common problems encountered in the practice of internal medicine. It allows the resident the opportunity to see earlier manifestations as well as socioeconomic and psychiatric aspects of disease that may not be apparent in the hospitalized patient. It is mandatory that there be closely supervised experience with both general medicine and subspecialty patients. As with the in-patient services, there should be an active teaching program by qualified on-site staff. The patient volume and spectrum in the ambulatory environment should be large enough to provide each resident with an adequate number and variety of new patient visits in addition to patient follow-up care. The continuity experience should be at least a half day per week. It is desirable that the experience be structured to permit the residents to follow patients from the ambulatory setting, through hospitalization, and back to the ambulatory setting in order for the residents to achieve continuity of care. Both in-patient and out-patient records should be kept in such a manner as to facilitate this continuity of care. Organizing this experience may require assignments to a clinic or other ambulatory setting during all or most of the residents' educational program. The conditions under which ambulatory patients are managed should emulate those of office practice and may indeed take place in the office of practicing physicians. In any such situation, adequate nursing, clinical and ancillary personnel as well as adequate space must be provided. Where preceptorial conditions prevail, the supervisor must be accountable and the experience subject to audit.

(5) *Emergency Department Experience:* The resident must have experience with and first-contact responsibility for the diagnosis and management of all types of patients seen in an active emergency department. The emergency facility in the educational institution should meet the standards outlined by the Joint Commission on Accreditation of Hospitals. The resident should be assigned to the emergency department for a period of at least one month. The resident should participate in the decision to admit patients to the hospital. Senior residents in Medicine should have additional experience in the emergency department. There should be careful supervision by staff acceptable to the program director. Consultations should be readily available both from and to other specialties. When appropriate and possible, the follow-up for such patients by the same resident should be arranged.

(6) *Intensive Care Experience:* The resident should participate directly in the care of patients with various illnesses in intensive care units. Such an educational experience should be conducted with adequate supervision and with ample consultation available. As with other parts of the educational program, there should be appropriate teaching rounds and conferences.

(7) *Special Educational Experience:* The ultimate responsibility for special educational tracks, such as those emphasizing primary care in the ambulatory setting, rests with the program director of the internal medicine program. The Residency Review Committee will consider special educational tracks to be part of internal medicine programs in its review and recommendations concerning accreditation.

(C) *Educational Exercises:* (1) *Rounds:* Patient teaching rounds and patient management rounds are integral to a good training program.

Patient teaching rounds are primarily educational. They should be formal and led by attending physicians selected for their knowledge of medicine and skill in bedside teaching. They should be regularly scheduled at a time reserved exclusively for this activity. There should be continuity and adequate contact between residents and faculty. Furthermore, it is desirable that the rotations assigned to the residents and their attendings more or less coincide to permit the greatest amount of time for evaluation. For example, in many pro-

grams the educational objectives can be achieved with teaching rounds conducted three times per week, with each session at least one and one half hours long and with the same teaching attending on service for at least four weeks, but preferably six weeks. It is desirable that the teaching physician see patients other than his/her own although the teaching physician's own patients may be included. Generally teaching rounds are selective rather than comprehensive so that the number of patients seen permits adequate time for discussion of such things as completeness and validity of clinical data, pathophysiology and differential diagnosis of the disease, and specific pharmacologic, dietary and social management of the patient. Teaching rounds should include direct interaction with the patient by the attending who evaluates the history and physical examination. It is of fundamental importance that the dignity of the patient-physician relationship be preserved. Patient management rounds are designed for day-to-day care of patients and should be coordinated to allow the resident to interact with other residents and with the physician of record for the patient.

The functions of teaching rounds and patient management rounds must be separately identifiable.

(2) *Conference and Seminars:* Departmental conferences and seminars and literature review activities covering both general medicine and the subspecialties must be regularly scheduled. These should promote an active interchange of information between members of the department; active resident participation in both the planning and the production of such conferences is essential. Proper structuring of these conferences should permit the incorporation of study of the basic sciences including the pathophysiology of disease processes and review of recent advances in medicine. Similarly, clinical pathological conferences and/or death conferences must be regularly scheduled. The resident's schedule must be such as to permit attendance at such conferences.

(D) *Basic Sciences and Research:* (1) *Basic Sciences:* Study of the basic sciences should be part of the clinical education of the resident. This is most effectively provided in an integrated manner at the patient's bedside and in conferences. Resident preparation for conferences should include reviewing and expanding scientific knowledge with key references to the basic science underlying specific clinical topics.

(2) *Research:* Research activities are supportive of a residency program. Research provides a healthy climate for an intellectual experience. Critical thinking tends to flourish in such an environment not only for the resident but also for members of the teaching staff. Active resident participation in clinical research projects with the advice and supervision of the teaching faculty is encouraged.

9. *Resident Responsibility:* (A) *Meaningful Patient Responsibility:* Professional growth with the attendant development of mature clinical judgment requires that residents, properly supervised, be given a degree of responsibility in patient care commensurate with their ability. This can be achieved only if the resident is realistically involved in the decision-making process. The residency must be mainly an educational experience; service responsibilities must be limited to patients for whom the resident bears major diagnostic and therapeutic responsibility. Residents must be given the responsibility for direct patient care including planning and management, both diagnostic and therapeutic. This experience on general internal medicine services and a combination of related subspecialty services must be relevant to the attainment of clinical competence in the broad field of internal medicine. Each resident must have a minimum of 24 months of such meaningful patient responsibility.

(B) *Duty Hours and Personal Responsibility:* It is necessary that the resident staff have a keen sense of personal responsibility for patient care. If the residents do not accept this responsibility, no number of scheduled rounds and conferences nor devoted teaching by the attending staff can produce sympathetic and effective physicians. A resident's obligation to patients is not automatically discharged at any

given hour of the day or any particular day of the week. Duty hours and night and weekend call must be sufficient to permit implementation of the concept of responsibility for patients and to provide for adequate patient care; every third or fourth night is recommended. In no case should the resident go off duty until the proper care and welfare of the patients have been assured.

Residency is a full-time responsibility; outside activities which interfere with optimal performance in the residency can not be condoned. The residents' activity outside the educational program should not be allowed to interfere with their performance in the educational process as defined in the agreement between the institution and the resident.

(C) *Progressive Responsibility*: The degree of responsibility both professional and administrative accorded to a resident should be increased progressively with each year of training. Included should be such areas as patient care, leadership, teaching, organization and administration. This goal can be achieved by senior residents supervising junior residents or by the senior residents acting as consultants to junior residents, particularly in the subspecialty areas. Residents from other disciplines must not supervise internal medicine residents on internal medicine services.

10. *Evaluation of the Resident*: It is essential that the program director continually evaluate the clinical competence of the residents. This evaluation should concern itself not only with intellectual abilities and manual skills but also with attitudes and interpersonal relationships. Included should be close observation of the resident performing specific tasks of patient management such as history and physical examination, choice of diagnostic studies, formulation of differential diagnoses or problem lists, development of plans for short and long-term medical management, etc. Residents should often be made aware of their progress and particularly of any weaknesses. Adequate records must be maintained both of the results of the evaluation process as well as of the contents of personal interview with the resident.

11. *Medical School and Institutional Affiliations*: Medical school affiliation is not required for approval of a training program. Such affiliations are desirable if they offer a type of quality control or if they satisfy certain identified deficiencies in a given training program. Particularly desirable is a cooperative educational effort with faculty participation. Interhospital affiliations may correct the same type of deficiencies.

12. *Totality of Educational Program*: The training program should place emphasis on the whole patient and should take into consideration not only medical problems but also cultural, social and economic background and the impact of medical problems upon other aspects of life with special emphasis on family. The training program should include significant exposure to both the preventive and the rehabilitative aspects of medicine. The resident should become familiar with disease processes associated with various environmental stresses and with methods for their control. In the same manner the resident should be familiar with the procedures and efficacy of medical rehabilitation.

The resident must learn to apply cost-effective measures to medical care, not only as they apply to the patient but also as they apply to the selection of procedures and studies in both the in-hospital and ambulatory environment.

The resident should learn to function in harmony with other members of the health care team. He should learn to recognize and understand the contributions of nursing personnel, laboratory personnel, physical and respiratory therapists, and hospital administrators.

At the conclusion of 36 months in an accredited program in internal medicine the resident should have had experience in the prevention of illness, in the detection and the treatment of illness, in the rehabilitation of patients, as well as in the socio-economics of illness and the team approach to the provision of medical care.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by the American Board of Internal Medicine should communicate with the Registration Section of the Board. Those who wish certification by a subspecialty board of the American Board of Internal Medicine must first be certified in internal medicine and should also apply to the Philadelphia office of the American Board of Internal Medicine.

Effective: July, 1980

LCGME: May, 1980

8. Special Requirements for Residency Training in Neurological Surgery

Training programs in neurological surgery are evaluated by the Residency Review Committee and accredited by the Liaison Committee on Graduate Medical Evaluation on the basis of recommendations forwarded to it by the Residency Review Committee. A list of accredited training programs in neurological surgery is published annually in the *Directory of Residency Training Programs*.

To be accredited by the Liaison Committee on Graduate Medical Education, an educational program in neurological surgery shall meet both the General Essentials and the Special Requirements for the specialty of neurological surgery.

An educational program in neurological surgery must have one parent institution with primary responsibility for the entire program. Appropriate institutions would include hospitals, medical schools, and medical foundations. As a general rule, affiliations with other hospitals should be based on a clear understanding of the values of such affiliation to the training program as a whole. The affiliation of hospitals at a distance from the parent institution which makes attendance at conferences and teaching rounds difficult is not favored.

As a general rule, there shall be a maximum of two geographically separate hospitals in the educational program. Exceptions to this rule may be made if a hospital offers special clinical resources, i.e., stereotactic surgery, trauma, or pediatric neurosurgery, which significantly augment the resources of the training program as a whole. There shall be no more than four geographically separate hospitals in the training program. In each geographically separate hospital, there shall be a qualified neurosurgeon responsible for the education of the residents in that unit. Certification by the American Board of Neurological Surgery is one measure of qualification. The neurosurgeon shall be appointed in this training capacity by the program director. Appointments in this capacity will generally be for a one year period and will be renewable. This appointee's major clinical responsibilities shall be at the hospital where the appointee is responsible for the educational process.

Conferences should be coordinated among institutions in a training program so that attendance by a majority of staff and trainees is facilitated.

In-patient facilities available for training programs in neurological surgery should be geographically identifiable and adequate in number of beds, support personnel, and proper equipment to ensure quality education. In-patient facilities may vary from one affiliated hospital to another, but should amply support essential prerequisites for excellence in patient care and teaching. For instance, the presence of a neurosurgical operating room with microsurgical capabilities and an intensive care unit specifically for the care of neurosurgical patients are considered definite assets to a training program. Similarly, neurosurgical beds should be on a designated neurosurgical nursing unit. There should be enough clinical neurosurgical patients admitted each year to ensure that the resident trainee is exposed to a wide variety and adequate volume of neurosurgical disease. The trainee should be granted the opportunity to participate actively in decision making processes concerning patient care and management.

The following minimum number of clinical procedures is suggested. It must be understood that achievement of this

Nuclear Medicine

minimum of clinical procedures will not ensure accreditation of a training program.

1. No affiliated hospital unit in the training program should be a component of a training program unless there are approximately 100 major neurosurgical operations per year, including twenty-five (25) procedures for a combination of brain neoplasms, aneurysms, and intracranial or spinal vascular malformations. Again exception may be made if a hospital offers special clinical resources, i.e., stereotactic surgery, trauma, or pediatric neurosurgery which significantly augment the resources of the training program as a whole.

2. Within the total clinical facilities available to the training program, there should be approximately three hundred (300) major neurosurgical procedures performed per year per finishing resident. This figure is a minimum. The location within a given training program of this neurosurgical workload, as well as the distribution of types of cases within it, is equally important. For instance, the cases should be appropriately distributed between cranial and extracranial surgical procedures and should represent a well balanced spectrum of neurosurgery. As a minimum, they should include approximately fifty-five (55) histologically verified intracranial neoplasms and/or aneurysms and vascular malformations per year per finishing resident.

Recognizing the nature of the specialty of neurological surgery, it is unlikely that an institution can mount an adequate educational experience for neurosurgical trainees without approved training programs in related fields. Clinically oriented, training programs in the participating institutions of the neurosurgery program should include accredited training programs in neurology, general surgery, internal medicine, and pediatrics. There should be resources for the education of neurosurgical residents in anesthesia, general surgery, neurology, internal medicine, pediatrics, pathology, ophthalmology, orthopedics, radiology, otolaryngology, and endocrinology. Educational experience in neuroradiology and neuropathology should be an integral part of the training program and designed for the education of the neurosurgical residents. Such experience should be under the direction of qualified neuroradiologists and neuropathologists. The program should offer training in the basic sciences of neuroanatomy, neurophysiology, neurooncology, neurochemistry, and neuroimmunology in some measure and in some degree.

There should be space and support personnel for research identifiable in the neurosurgical division or department. These should be available to the neurosurgical resident trainee. Neurosurgical faculty participation in undergraduate medical education is desirable.

The training program director and the neurosurgical staff should be well qualified neurological surgeons. The program director should be certified by the American Board of Neurological Surgery or possess equivalent qualifications. The training program director must assume responsibility for all aspects of the training program.

The house officer's activity outside the educational program should not be allowed to interfere with his or her performance in the educational process as defined in the agreement between the institution and house officer.

The training program in neurological surgery shall follow after one year of training in an accredited program in general surgery, or after one year in a program sponsored for the acquisition of fundamental clinical skills. The neurosurgical trainee may then embark on his or her neurosurgical training program which shall then be of sixty months' duration, thirty-six months of which should be on the clinical service of neurological surgery. The resident trainee should assume increasing responsibility during these months. A block of training of three months minimum in an accredited neurology training program must be arranged for all trainees unless they have previously had analogous formal clinical training in an accredited neurology training program.

There shall be a period of time as senior resident in neurological surgery. This is considered a critical component

in each trainee's planned program. The senior resident will have major or primary responsibility for patient management as deemed appropriate by the program director. The senior resident shall have administrative responsibility as designated by the program director.

Twenty-one months of the total sixty months may be devoted to any of several aspects of the training program depending on the needs of the trainee. It may be spent in the study of the basic sciences, neuroradiology, neuropathology, or other appropriate subject matter as agreed upon by individual trainee and the program director.

One of the signal qualities of a training program is the quality of trainees attracted to it. Also, the ability of the faculty and the Program Director to assure a steady increase in the trainee's knowledge is an attribute of a successful training program. In the review process the Residency Review Committee will seek evidence that the program evaluates the progress of the residents while in training.

Appointments of other individuals for special training or education, such as fellowships, must not dilute or interfere in any way with the educational opportunities of regularly appointed trainees. Addition of such individuals by a Program Director requires a clear statement of the areas of training, clinical responsibilities, and duration of the fellowship. This statement is to be supplied to the Residency Review Committee at the time the program is reviewed. If fellows so appointed will in the opinion of the Residency Review Committee interfere in the education of the regularly appointed trainees, the accreditation status of the program may be adversely affected.

The provisions of the General Requirements must also be met for a program to achieve approval.

Residents who seek certification by the American Board of Neurological Surgery should communicate with the Secretary of that Board to be sure that the requirements for certification have been fulfilled. Requests regarding evaluation of educational programs in neurological surgery and all related program inquiries should be addressed to the Secretary of the Residency Review Committee for Neurological Surgery, 535 North Dearborn Street, Chicago, Illinois, 60610. Inquiries regarding certification in neurological surgery should be addressed to the Secretary, American Board of Neurological Surgery. The current addresses of these offices are published in each edition of the *Directory of Residency Training Programs*.

Effective: Jan. 1981

LCGME: May 1980

9. Special Requirements for Residency Training in Neurology (See Psychiatry and Neurology)

10. Special Requirements for Residency Training in Nuclear Medicine

Nuclear Medicine is concerned with the diagnostic, therapeutic, and investigational uses of radionuclides.

Training Goal: Residencies should provide training and experience in all divisions of the specialty of nuclear medicine, including diagnostic and therapeutic applications of radionuclides, and those fields of basic science relevant to the attainment of competence in the broad field of nuclear medicine.

Training Duration: The minimum training period in nuclear medicine shall be two years following an approved preparatory post-doctoral period of at least two years duration, as outlined in the American Board of Nuclear Medicine requirements for certification as stated in the current *Directory of Residency Training Programs*. The program will ensure that during the total post-doctoral training the candidate will have the equivalent of two years in which the primary emphasis is on the patient and his clinical problems.

Training Content: At the completion of the total training program the trainee should have a broad knowledge of medicine, with the ability to obtain a pertinent history, perform an appropriate physical examination, and arrive at a

differential diagnosis. The trainee should be able to plan and perform appropriate nuclear medicine procedures, to interpret the results, and to arrive at a logical diagnosis. He should be qualified to recommend therapy or further studies. If radionuclide therapy is indicated, he should be capable of assuming responsibility for patient care.

The trainee should have received adequate instruction in the theoretical and practical aspects of diagnostic and therapeutic nuclear medicine, including education in the relevant basic sciences. The trainee must have participated in a suitably organized and conducted institutional program which must have included medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry, and statistics.

The program should be structured so that the trainee's responsibilities in nuclear medicine increase progressively during the residency. The program should be sufficiently adaptable so that at completion of the residency the trainee will be knowledgeable in the relevant aspects of clinical medicine, including patient care.

The trainee should become familiar with the methods of investigation, with special emphasis on the use of radionuclides, and should be encouraged to participate in research of his own under adequate supervision.

Program Director and Staff: The Program Director must be a highly qualified physician, full-time in the specialty of nuclear medicine or otherwise acceptable to the Residency Review Committee for Nuclear Medicine. The Director must be responsible for all aspects of the training program.

The teaching staff assisting the Program Director should have a breadth of experience which is sufficient to assure adequate education in all areas of the broad field of nuclear medicine.

The ratio of teaching staff to trainees should be sufficient to ensure adequate supervision and training.

Institutional Requirements: The medical facilities within which a residency in nuclear medicine is offered should be of such size and composition as to provide ample clinical material. The program should provide adequate opportunity for trainees to participate and study personally patients with scanning procedures, *in vitro* and *in vivo* laboratory studies, and nuclear medicine therapy. The program should be of sufficient magnitude and diversity to provide a broad experience in the diagnosis, treatment, and follow-up of various types of clinical applications of radionuclides. There must be an adequate mechanism for recording case records and results and to facilitate follow-up and teaching. The number of nuclear medicine technologists must be adequate for the workload of the facility.

Space must be adequate for both educational and clinical functions of the nuclear medicine service. This may be accomplished by sharing of facilities. An active medical library should be available within easy commuting distance of the nuclear medicine facility used for residency training.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

11. Special Requirements for Residency Training in Obstetrics and Gynecology

Residency programs in obstetrics and gynecology should constitute a structured educational experience, planned in continuity with undergraduate medical education, in the health care area encompassed by this specialty. While such residency programs contain a patient service component, they must be designed to provide education first and not function primarily to provide hospital service.

The Program Director should be familiar with:

- (1) The principles set forth under General Requirements;
- (2) "Guide for Residency Programs in Obstetrics and

Gynecology," a document prepared by the Residency Review Committee to amplify these Special Requirements;

- (3) "Contents of a Residency in Obstetrics and Gynecology," prepared as a general guide by the Council on Resident Education in Obstetrics and Gynecology (CREOG);
- (4) The consultation services to proposed or existing residency program available by request to CREOG.

Length of Graduate Medical Education: The minimum requirement for residency education acceptable for American Board certification is clearly stated—36 months of progressive clinical experience in obstetrics and gynecology with the usual time as a chief resident.

Residency programs must be of 36 months or longer duration. Most are planned to provide either three or four years of experience. Two programs of different lengths are not approvable in the same institution. A graduate may enter residency directly after receiving the M.D. degree or its equivalent. Physicians beginning graduate medical education after 1976, in order to assure eligibility for examinations of the American Board of Obstetrics and Gynecology, must have a minimum of four years of approved clinically oriented graduate medical education of which three years must be in the specialty. Longer programs are permissible.

After July 1, 1975, the *Categorical* first year of graduate medical education will be comparable to the previous straight internship. It must be conducted in conjunction with an approved residency, and must have the same Program Director. It may be structured in any of several ways desired by the Program Director, subject to the approval of the Residency Review Committee. The *Flexible* first postgraduate year requires establishment, direction, and approval by two or more different specialties and their respective Residency Review Committees. It is unlikely that the *Flexible* first postgraduate year will have frequent applicability or direct relationship to obstetrics and gynecology residency programs, although individuals completing such a first postgraduate year could enter an obstetrics and gynecology residency.

The policy of the Residency Review Committee is to approve only parallel (non-pyramidal) residency assignments. During the *Categorical* or *Flexible* first postgraduate year a program may have more appointees than can be appointed into the 36 months of clinical residency training. No more residents should be appointed to begin their required 36 months of clinical training than can be accommodated in the final or chief resident year.

As noted in the General Requirements, it is not expected that all residencies will adopt the same rotations or a rigid uniform sequence of experience. Rotation to or experience in other disciplines such as pediatrics, anesthesia, general surgery, internal medicine, pathology, or urology may be desirable. Such rotations however, cannot be counted as a formal part of the required 36 months of clinical experience in obstetrics and gynecology.

Number of Residents: The question of the exact number of residents in a given training program cannot be answered precisely. The maximum number of residents that can be adequately and responsibly trained at one time depends on several interrelated factors. Large programs may lose their effectiveness if the number of residents exceeds 30. The minimum number of residents approved is one in each year of a three-year program. These small programs are reviewed most critically by the Residency Review Committee, which looks, among other factors, for a full complement of residents in the obstetrics and gynecology program, adequate numbers of residents in other approved residency training programs in the same hospital, and sufficient total responsibility, including operative and outpatient experience, to enable him to adequately practice his specialty on graduation from the program. This responsibility must progress in an orderly fashion culminating in the chief resident year. Each resident must

Ophthalmology

have sufficient independent operating experience to make him competent, and total responsibility for a sufficient number of patients to enable him to possess those diagnostic and treatment skills that are demanded in the wide area of medical and surgical problems for which an obstetrician and gynecologist is responsible in both his office and hospital practice.

Clinical responsibility alone does not constitute a suitable educational experience. It is also very important that each program have a sufficient number of interested and competent teaching staff. The staff must be sufficient to supervise the residents at all levels and in all aspects of the specialty. It is also the responsibility of the program to maintain a continuous evaluation of each resident and to be sufficiently flexible to respond to and accommodate the varied backgrounds and needs of individual residents so as to graduate capable and competent specialists.

Staff: It is desirable that the Chief of Service of the Department be certified by the American Board of Obstetrics and Gynecology. In the absence of such certification, the Residency Review Committee may approve programs when the chief has recognized ability and high professional standing in the specialty. At least one additional senior member of the staff should be similarly qualified.

There should be definite assignments of the responsibilities for resident training, preferably by the chief of the service or his designated representative (such as a departmental program director). To assure continuity of teaching effort and departmental policy the chief of service should hold office for at least three years.

Where the services of obstetrics and gynecology are separate in any given hospital, the chief of each service seeking residency approval, and at least one subordinate must be certified or otherwise qualified as outlined above. If obstetrics and gynecology are separate services, combined approval can be granted only if arrangements are made for rotation of residents between the two services to provide graded and progressive responsibility.

Approval cannot be granted for residency training in gynecology if the service is a subdivision or subservice of general surgery, unless the subdivision of gynecology is headed and staffed by a chief and at least one other individual certified by the American Board of Obstetrics and Gynecology or otherwise qualified as specialists in this field as specified above.

In addition to these Special Requirements as set forth, all provisions of the General Requirements must also be met for approval of a residency program.

Residents who plan to seek certification by the American Board of Obstetrics and Gynecology should communicate with the Secretary of the Board, as listed in Section IV, to obtain the latest information regarding current requirements for certification.

12. Special Requirements for Residency Training in Ophthalmology

Duration of Training: Residencies in ophthalmology must include at least three years of training in the specialty ophthalmology.

Residencies of five years' duration, which include training in both otolaryngology and ophthalmology, may be approved provided at least 36 months' training is in ophthalmology.

A program need not necessarily be confined to a single hospital. In programs involving two or more hospitals, it is essential that the training program be organized by the parent hospital with responsibility for progressive training of the residents. Collaborative programs may be developed where two hospitals of graduate training caliber have complementary clinical resources which can be combined to advantage in developing an acceptable program. For example, specialized hospitals which do not admit patients for medical and neurological diseases might well provide temporary service in a general hospital.

Scope of Training: Residencies in ophthalmology should offer a broad training and should preferably include some experience in closely related fields of medicine and surgery. Adequate clinical and operative experience should be provided. Essential equipment for diagnosis and treatment should be available including commonly used special apparatus. Adequate library facilities should be available and residents should be urged to use the library frequently. An informal journal club is suggested as a stimulus to use of library facilities. The training should include a systematic course of instruction with demonstration on clinical and technical subjects pertinent to the various phases of ophthalmology. Cases should be presented and discussed during ward rounds at least twice a week. Residents should have daily contact with at least one staff man.

Instruction in surgical technique should be sufficient to enable residents to undertake operative work under supervision, especially toward the end of the residency program. Presentation of cases by the resident to the attending ophthalmologist at ward rounds and in clinic should be routine procedures at least once a week.

Basic Medical Science: There should be laboratory training in anatomy of the eye and adnexa and the related nervous system, also in microbiology, biochemistry, embryology, pathology, optics, pharmacology, and physiology. These studies should be closely correlated with the clinical experience. The resident should be assigned for a period of service in pathology and bacteriology. It is important that frequent departmental conference are held for detailed discussion of problem cases. Clinical pathological conferences should be so conducted that the residents are able to study and discuss with the pathologist and the staff all tissues removed at operations, and all autopsy material from patients on their service.

Surgical anatomy should be demonstrated by the attending surgeons in discussing surgical cases with the resident. Opportunity for the residents to work out special anatomical problems, by performing regional dissections should, if possible, be provided. Research offers an important opportunity for the application of the basic sciences in clinical problems. Reasonable facilities for research by the resident should be provided, together with stimulating guidance and supervision during the latter part of his training.

Staff: The staff should be composed of highly qualified teachers who have skill and judgment. They should be properly organized with the designated head or chief of service responsible for the quality of work done in the department. The position of chief of service should not be rotated as an honorary appointment but should be held by the ophthalmologist best fitted for this responsibility. The members of the staff should have a sincere interest in teaching and in the welfare of the residents and must be willing to give the time and effort required by the educational program.

Clinical Material: The hospital must be able to provide a satisfactory number and variety of patients. Statistical data also cannot reveal these considerations adequately. During the residency program an adequate operative responsibility must be provided the resident staff. Such experience is essential to give the progressive experience, both as assistant and operator, necessary for the development of surgical judgment and skill by the resident. The residency program should be so organized that the resident will hold positions of increasing responsibility for the care and management of patients. The residents shall have sufficient operative experience under supervision to acquire surgical skills and judgment through the performance of surgical operations with a high degree of responsibility. The residents must be held responsible for the recording of complete and adequate case records for both in-patients and outpatients. These case records should be reviewed and utilized by the attending ophthalmologist whenever consultations are required by the resident.

An approved residency, in ophthalmology should include a well organized and supervised active outpatient service super-

vised daily by an attending ophthalmologist.

A hospital which limits its clientele to special types of cases may, if otherwise qualified, be approved as a collaborating hospital if its residency is an integral part of an approved comprehensive program.

Special Information. One measure of the quality of a program is the performance of its graduates on the examinations of the American Board of Ophthalmology.

The provisions of the General Requirements (Sections 1 to 10) must also be met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

Effective: July 1978

LCGME: Feb. 1978

13. Special Requirements for Residency Training in Orthopedic Surgery

Surgical and orthopedic facilities must be satisfactory and clinical material sufficient to afford residents adequate experience in the correction of congenital and acquired deformities and in the treatment of fractures and other acute and chronic disorders which interfere with the proper function of the skeletal system and its associated structures. Residents should become thoroughly familiar with all methods of diagnosis and treatment, corrective exercises, physical medicine, operative procedures and the use of orthopedic appliances. Instruction in surgical technic should be sufficient to enable residents to undertake operative work on their own responsibility, especially toward the end of the residency program. Clinical instruction should include teaching rounds and departmental conferences.

Residencies may be organized in the fields of adult orthopedics, children's orthopedics, fractures, or in combinations of these. As preliminary training the Council recommends one year of general surgery in addition to the internship.

Quantitative Requirements: Both hospital and outpatient facilities are desirable, and institutions offering residency instruction should treat a minimum of 200 patients annually.

Applied Basic Science Instruction: Anatomy, bacteriology, biochemistry, embryology, pathology, and physiology are especially desirable and should be closely correlated with clinical experience. See Sections 1-9 of these Essentials for discussion of applied basic medical science instruction.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

14. Special Requirements for Residency Training in Otolaryngology

Duration of Training: Residency training programs in Otolaryngology are designed to meet the requirements of the Council on Medical Education of the American Medical Association, the American College of Surgeons, and the American Board of Otolaryngology. The training must be of at least five years' duration, of which three must be progressive training in the specialty. The five years must include one year in an approved residency in general surgery, preferably before the training in otolaryngology but not as the final year of training. It is emphasized that the above are minimal requirements for accreditation and are necessary to provide a foundation for further development in the broad field of otolaryngology.

Scope of Training: As stated in the general requirements (Section 7, Training Program), it is not essential or even desirable that all programs should adopt exactly the same program, or that they should offer a rigidly uniform sequence of experience. It is essential, however, that all institutions participating in graduate training in otolaryngology should be able to meet the fundamental requirements for an approved

program and, either alone or in collaboration, should obtain comparable results in the quality of training and in the experience obtained.

Residencies in otolaryngology should offer broad training and should preferably include some experience in closely related fields of surgery. Adequate educational content and overall clinical and operative experience should be provided to enable the resident on completion of his training to begin the practice of his specialty in a scientific and competent manner. Residencies in otolaryngology must provide in-depth training and experience in medicine and regional surgery. It is essential that the training program have a well-organized, comprehensive, and effective educational curriculum. The curriculum content should reflect careful planning, with evidence that the cyclical presentation of core specialty knowledge is being supplemented by the addition of current information and that teaching is being conducted in a variety of educational settings employing accepted principles of educational methodology.

Essential equipment for diagnosis and treatment should be available, including all special apparatus. The clinical material should be sufficient in variety and amount to provide adequate training in the various divisions of the specialty. The program should provide for training in the following areas:

1. Morphology, physiology, pharmacology, pathology, microbiology, biochemistry, genetics, immunology, allergy and neurology relevant to the head and neck; the air and food passages; the communication sciences, including a working knowledge of audiology and speech; the endocrine disorders as they relate to otolaryngology.
2. The recognition and management of congenital anomalies, abnormal function, trauma and disease in the regions and systems enumerated in item one above.
3. The recognition and medical management of diseases and abnormality of function of the ears, upper and lower respiratory tract and food passages.
4. The recognition, technique and surgical management of congenital, inflammatory, neoplastic and traumatic states, including among others:
 - a. Temporal bone surgery
 - b. Paranasal sinus and nasal septum surgery
 - c. Maxillofacial, plastic and reconstructive surgery of head and neck
 - d. Surgery of the salivary glands
 - e. Head and neck oncologic surgery
 - f. Head and neck reconstructive surgery particularly as it relates to the restoration of function in congenital anomalies; following extensive surgery and complications of head and neck trauma
 - g. Peroral endoscopy, both diagnostic and therapeutic
 - h. Surgery of lymphatic tissues of the pharynx
 - i. Pre- and post-operative care.
5. Diagnosis and diagnostic methods including related laboratory procedures.
6. Diagnostic and therapeutic radiology, including the interpretation of roentgenograms of the nose, accessory sinuses, salivary glands, temporal bone, skull, neck, larynx, lungs and esophagus.
7. Awareness of the current literature especially pertaining to the areas mentioned in item one above.
8. Awareness of the habilitation and rehabilitation techniques and procedures pertaining to otolaryngology.

A more detailed list of the procedures to be performed by residents may be obtained by reviewing the Residency Review Committee form entitled "Otolaryngologic Operative Experience Report for an Individual Resident." It is essential that there be documentation of a careful analysis of the operative experience of the individual residents and the cumulative operative experience of the graduating residents annually by the Program Director as a part of his responsibility for the evaluation of the balanced progress of individual residents and the total program. The training shall include a systematic course of instruction with demonstrations on clinical and tech-

Pathology

nical subjects pertinent to the various phases of otolaryngology. Adequate experience should be provided in office practice procedures and management.

A program need not necessarily be confined to a single hospital. In programs involving two or more hospitals, it is essential that the training programs be organized by the parent institution with progressive responsibility for the residents. Collaborative programs can be developed where two hospitals of graduate training caliber have complementary clinical resources which can be combined to advantage in developing an acceptable program.

Application of the Basic Medical Sciences: There should be training in the concepts and technique of allergy therapy, and in audiology and speech and language disorders. There should be applied training in hearing, hearing evaluation, hearing aid use, hearing conservation, hearing rehabilitation and the effects of noise on hearing. There should be instruction in the recognition and management of such disorders as aphasia, articulation, dysfluency and voice disorders as well as in normal and abnormal language development. Also, there should be applied training in vestibular function evaluation and vestibular disabilities.

Frequent departmental conferences for a detailed discussion of problem cases are important, as are also clinicopathological conferences. The residents should study and discuss with the pathologist all tissues removed at operation and all autopsy material from patients on their services. It is desirable to have the residents assigned for a period of service in the department of pathology.

Surgical anatomy should be stressed by the attending surgeons in discussing surgical cases with the residents, and also by the pathologists in the performing of autopsies as far as is possible. In addition, opportunity for the residents to work out special anatomic problems by performing dissections in the laboratory should be provided.

Research offers an important opportunity for the application of the basic sciences in clinical problems, and is an essential part of the preparation of the resident for a lifetime of self-education after the completion of formal training. It is essential that the training program provide a meaningful research experience for the residents, sufficient to result in an awareness of the basic principles of study design, performance, analysis and reporting. The research experience may be clinical or basic in nature and should reflect careful advice and planning with the faculty.

One of the major areas of responsibility for program directors is the area of continuing program and trainee evaluation. It is essential that the training program conduct a periodic evaluation of the adequacy of the total educational experience of the residents and of the professional and educational progress of each resident.

It is essential that the residents participate in existing national examinations. Analysis of the results of these testing programs should guide the faculty in regard to the strengths and weaknesses of the individual trainees and the teaching program. Reasonable facilities for research by the residents should be provided, together with stimulating guidance and supervision.

Staff: The chief of the training program should be certified by the American Board of Otolaryngology, or possess suitable equivalent qualifications.

At least one other member of the staff should be similarly qualified.

The director of the otolaryngology training program must devote sufficient time to the conduct of the program to assure that an appropriate educational experience is provided for the residents.

It is the responsibility of the program director to develop a sound administrative organizational framework and an effective teaching staff as essential elements of an approved training program. It is essential that there be clear documentation of an adequate faculty commitment to the residency training program and that there be assurance of adequate institutional

support for the otolaryngology training program in terms of budgetary, space and clinical resources provided by the institution.

Staff members must have a real interest in teaching, be willing to give the necessary time and effort to the educational program and be engaged in scholarly activities such as (1) participation in regional or national scientific societies; (2) participation in their own continuing surgical education; (3) engage in scientific publications and presentations; and (4) show active interest in research as it pertains to their specialty. A staff which does not exhibit such characteristics will be cause for grave concern as to its adequacy and suitability for conducting a program of graduate education in otolaryngology.

Surgical Staff: The surgical staff should be composed of surgeons who are highly qualified in both surgical skill and judgment. It should be properly organized and harmonious, with the designated head or chief of service responsible for the quality of work done in the department, and he should be the surgeon best fitted for this responsibility. The members of the staff should have a sincere interest in teaching and in the welfare of the residents and must be willing to give the time and effort required by the educational program.

Approval cannot be granted for residency training in otolaryngology if the service is a division of the department of surgery unless that division is headed and staffed by qualified otolaryngologists as specified above.

Clinical Material: The institution must be able to provide an adequate number and variety of otolaryngic medical and surgical patients. Arbitrary figures cannot reveal these considerations accurately. The surgical cases provided by the hospital should reflect a broad range of pathological problems and clinical experience pertinent to otolaryngology. This is essential to give the progressive operative experience necessary for the resident. The residency program should be organized so that the residents will hold positions of increasing responsibility for the care and management of patients.

An approved residency in otolaryngology should include a well-organized and well-supervised active outpatient service.

A hospital which limits its clientele to special types of cases may, if otherwise qualified, be approved as a collaborating hospital if its residency is an integral part of an approved comprehensive program.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

Effective: Not Specified

LCGME: May, 1980

15. Special Requirements for Residency Training in Pathology

Recognition is extended in this field to residencies in anatomic pathology, clinical pathology, forensic pathology, and neuropathology. Training programs or courses of study intended to qualify applicants for certification in other special fields of pathology by the American Board of Pathology are approved by the Board on an individual basis.

Scope of Training: The training program in pathology should be designed to acquire a broad knowledge of the subject matter in the fields of clinical and anatomical pathology, as well as the techniques and methodology required to gain this information. Experience in interpretation of laboratory data, in directing a laboratory, in teaching, and in investigation are all objectives of a good program.

Every attempt should be made to gain correlative experience in anatomic pathology and clinical pathology in addition to relating these experiences to the patient.

Systematic instruction in anatomic pathology should be accomplished primarily through the use of fresh tissues,

microscopic slides, and photographs, supplemented by museum specimens and seminar material when available. Proficiency in frozen-section diagnosis, in exfoliative cytology, in electron and other forms of microscopy, histochemistry, and in cytogenetics are important aims. The teaching material must be sufficient in quantity and variety to afford adequate training in gross and microscopic pathology. Special emphasis, however, should be placed on the quality of the supervision and instruction rather than the quantity of material.

The training in clinical pathology should emphasize methodology and techniques because the result of a laboratory test is no more valuable than the accuracy of performance. Interpretation of these tests for assistance in the diagnosis and management of patients, and the development of administrative ability are of special value in the division of clinical pathology.

Instruction should include, but not be limited to, training in medical microbiology, immunohematology-blood banking, medical chemistry, medical parasitology, hematology, endocrinology, medical microscopy, and the application of the physical and biological sciences in the diagnosis, prognosis, and treatment of diseases.

The general criteria for approval of hospitals and laboratories are both qualitative and quantitative. On the score of quality, consideration is given to the qualifications of the director of laboratories and his associates and assistants, the supervision of work of the trainee, the quality of the educational program, and the exactness and completeness of the laboratory work performed. On the score of quantity, consideration is given to the volume and distribution of laboratory work, both in absolute numbers and in relation to the size of the hospital, to the diversity and completeness of tests performed, to the size and equipment of the laboratory, and to the number of medical and non-medical personnel in relation to the volume of work.

In general, the qualitative standards will determine whether a laboratory is approved and the quantitative standards will determine whether the approval is for one, two, three, or four years of training.

It is expected that the director of the program be a fully qualified specialist in the branches of the specialty for which training is approved, and that he provide adequate supervision of the hospital laboratory. Adequate supervision is not interpreted in terms of hours, but rather that the director have no obligation outside the one approved hospital except in a university department of pathology in which he and the residents have an opportunity to participate in the education program. In special instances, the equivalent of full time direction by two or more qualified persons will be accepted, and one person need not spend the entire working day in the laboratory. Similarly, in special instances, two or more hospitals will be approved as a unit with a single, full-time director of laboratories if it is apparent that a satisfactory training program can be conducted.

It is expected that the number of medical technologists and their qualifications will be proportional to the volume of work in the laboratory.

Sufficient laboratory and office space, as well as equipment, should be provided to enable the department to function efficiently. There should be facilities in all hospitals for tests usually performed in clinical pathology, for the study of surgical and cytologic specimens, and for the performance of necropsies. In larger hospitals the variety of tests performed should be larger, and in hospitals with over 500 beds all recognized laboratory procedures should be available for study and treatment of patients.

Fixed anatomic and pathological specimens in proportion to the size of the hospital, should be available for study by the staff. Properly filed and indexed color photographs may in part be substituted for museum specimens.

The work of the trainee must be supervised. Conferences, seminars, journal clubs, and demonstrations should be conducted as frequently as the volume of the material and the size of the staff justifies. A clinicopathologic-correlative conference

should be held regularly to review deaths.

In institutions offering training in both anatomic and clinical pathology, the program should be so arranged as to assure even division of the residents' training and experience in anatomic and clinical pathology. Ordinarily, this can best be achieved by a series of exclusive, or nearly exclusive, assignments to the various departments of the laboratory.

Training Programs in Neuropathology

It is expected that the program will be directed and adequately supervised by a qualified neuropathologist.

The neuropathology program should be associated with the Department of Pathology in which during each year at least 200 necropsies, with examination of the nervous system, are performed, and 100 neurosurgical specimens from operative procedures are examined for diagnosis. The number of residents in neuropathology should not exceed one for each fifty such annual necropsies.

Adequate facilities and competent personnel should be available and properly utilized for the conduct of the special procedures customarily employed in neuropathology.

There should be teaching material in the form of slide collections augmented by photographs or museum specimens sufficient to provide adequate study by the residents of conditions and diseases not frequently encountered in the routine necropsies and surgical specimens.

Teaching conferences in neuropathology, conferences with the general pathology service and conferences with the clinical services of neurology, psychiatry and neurology should be regularly scheduled and attended.

It is expected that residents in neuropathology will participate in research and will be provided with adequate facilities.

Training Programs in Forensic Pathology

Institutions or offices may apply for approval of training programs in the special field of forensic pathology.

It is expected that the program will be directed and adequately supervised by a qualified forensic pathologist.

The approved institution or office should conduct at least 150 medical legal necropsies per year. Of these, 50 or more should be in cases in which death is due to the immediate (within 24 hours) and direct effects of physical or chemical injury. Twenty-five or more of these autopsies in which death is the immediate result of violence, the investigation by the pathologist should include an examination of the body at the scene of death before it has been disturbed.

Adequate facilities and competent personnel shall be available and properly utilized for the conduct of all bacteriological, biochemical, toxicological, firearms, trace element, and other scientific studies as may be needed to insure complete postmortem investigation.

Quantitative Requirements: In the field of anatomic pathology there should be sufficient volume and variety of necropsy, surgical and cytological material (except in special programs) to insure adequate education, training, and experience in this branch of the specialty. There are no absolute criteria but special scrutiny will be given to a hospital in which an adequate volume and variety of the various types of anatomic material does not exist.

In the field of clinical pathology there should be a reasonable diversification of tests and in each category there should be sufficient volume to provide training and experience. There are no absolute criteria but special scrutiny will be given to a hospital in which there is not a reasonable diversification and variety.

Training Programs in Blood Banking

The program must be directed and adequately supervised by a physician qualified in blood banking.

The training program shall include all aspects of blood banking, i.e., medical, technical research, and administrative. The program must be conducted in institutions where blood is

Dermatopathology/Pediatrics

regularly drawn and processed and also must include training and experience on an active transfusion service of a hospital.

The administrative experience should include donor recruitment and processing as well as logistic aspects of blood banking. The program should also provide adequate study of the technical and laboratory facets of transfusion and transplantation. The hospital training should include clinical experience in the use of blood and blood components. The resident in blood banking should participate in research or development activities and that adequate facilities will be provided.

In order to obtain adequate training in a blood bank program, a sufficient number of blood donations and transfusions to provide the number of skills should be performed in the participating institution(s). Also, an active teaching program in laboratory medicine and pathology, as well as a training program for blood bank technologists, in one or all of the institutions in the training of blood bank physicians, is desirable.

Requirements for Training Programs in Radioisotopic Pathology: The training program shall include all aspects of the use of radionuclides in the study of body fluids, excreta, or tissues quantified outside the body. The training program should provide the trainee adequate information regarding the basic theory and physics of radiation, isotope production and labeling, radiation protection, appropriate instrumentation, a broad spectrum of *in vitro* analyses and their interpretation, autoradiography, quality control, and other related topics. Furthermore, the program should provide the trainee with the ability to set up and operate a laboratory to perform the applicable procedures, including supervision and training of personnel.

In order to provide such training, the program shall be directed and closely supervised by a physician qualified in radioisotopic pathology and devoting his major activities to the specialty of radioisotopic pathology. The training institution should be of such size and composition as to provide not only ample radioisotopic clinical material but possess all the supporting facilities necessary to accomplish the above objectives of the program.

The minimum training period in radioisotopic pathology shall be one year in addition to the completion of acceptable residency training in an approved program of either anatomic and/or clinical pathology as outlined in the *Directory of Residency Training Programs*.

Training Programs in Dermatopathology

The training program shall include all aspects of dermatopathology, including the gross and microscopic diagnosis of skin disorders by means of direct visual inspection and by light and fluorescence microscopy, as well as histochemistry, together with the relevant aspects of electron microscopy, cutaneous mycology, bacteriology, and entomology. Furthermore, the program should provide the trainee with the ability to set up and operate a laboratory to perform the applicable procedures, including supervision and training of personnel.

In order to provide such training the program shall be directed and closely supervised by a physician qualified in dermatopathology and devoting his major activities to the specialty of dermatopathology. The training institution should be of such size and composition as to provide not only ample dermatologic clinical material but possess all the supporting facilities necessary to accomplish the objectives of the program. Ordinarily, the institution would have approved residency programs in both dermatology and pathology.

The minimum training period in dermatopathology shall be one year in addition to the completion of acceptable residency training in an approved program of either dermatology or pathology as outlined in the *Directory of Residency Training Programs*.

Approval is granted for residency training in pathology in the following categories:

Category APCP-4. In both anatomic and clinical pathology for a total of four years.

Category AP-3. In anatomic pathology only for three or more years.

Category CP-3. In clinical pathology only for three or more years.

Category APFP-4. In both anatomic pathology and forensic pathology, two years in each, for a total of four years.

Category APNP-4. In both anatomic pathology and neuropathology, two years in each, for a total of four years.

Category SP-1. In special pathology, usually for only one year. Programs in this category are ordinarily approved in highly specialized hospitals of acknowledged excellence which because of the limitations of their clinical material cannot provide general training in anatomic or clinical pathology. Residents receiving part of their training in such programs should consult with the American Board of Pathology as to what other training is necessary to provide acceptable breadth of experience.

Category FP-1. In forensic pathology for one year.

Category FP-2. In forensic pathology for two years.

Category NP-1. In neuropathology for one year.

Category NP-2. In neuropathology for two years.

The provisions of the General Requirements (Sections 1 to 10) must also be met for approval.

Residents who plan to seek clarification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

16. Special Requirements for Residency Training in Pediatrics

Residency programs in pediatrics are organized and conducted to provide an advancing educational experience with increasing patient responsibilities over a period of three years. The Residency Review Committee designates the various levels of pediatric training as Pediatric Levels (PL) 1, 2 and 3. Residents and trainees of other varieties may also rotate through the pediatric program for short term educational experience.

PL-1 refers to the first full year of accredited basic or core training in pediatrics. This may correspond to a categorical internship, or to the first year of pediatric residency for someone with previous nonpediatric experience. The PL-1 year must contain at least eight months of supervised pediatric experience. Any or all of the remaining four months may be scheduled by the pediatric training program director for other enriching or elective educational experience.

PL-2 refers to the second core year of an accredited pediatric residency. Increased assumption of responsibility including supervisory activities is expected.

PL-3 refers to the third year of accredited pediatric clinical training. It may be a chief or senior supervising residency.

A year of supervisory experience must be an integral part of the total three-year program. This year must include at least six months of direct and senior supervisory responsibility in general pediatrics. Subspecialty rotations, if any, e.g., cardiology, hematology, neonatal intensive care, nephrology, etc., should be at least one month in duration. No one subspecialty should accumulate more than six months time over a three year program and the total of all such rotations should not exceed eleven months. In keeping with the commitment of pediatrics to primary and comprehensive care, the three year program must include the equivalent of at least six months' experience in ambulatory pediatrics. To enhance understanding of longitudinal aspects of disease, as well as growth and development, it is recommended that at least a portion of the ambulatory experience be of continuing as well as block assignments.

An accredited training program may be entirely independent (intramural) or may occur in two or more institutions as an affiliated or integrated program.

In both integrated and affiliated programs the strengths of each institution are drawn upon to make a satisfactory unitary educational experience for the house officer. The amount of time to be spent by the house officer in each of the participating hospitals should be determined by his/her educational needs rather than by the service needs of each institution. The educational objectives and experiences obtained in each institution must be described. Copies of formal written agreements and contracts specifying administrative and organizational relationships which bear upon the educational program must be submitted.

Accredited programs may use the resources of other appropriate but less closely affiliated hospitals or institutions to provide certain essential or enriching elements in the house officer's training, such as newborn, subspecialty, adolescent, development or community pediatrics rotations. If such affiliate hospitals or institutions do not have their own approval by the Residency Review Committee, periods of rotation through them should not total more than three months in each of the years of training.

When a program which cannot supply a complete educational program relies upon another program to provide some essential element, it is important that the arrangement between the two programs be such that the needs of the house officer are actually met. The commitment of each program to the other must be made explicit, and should be embodied in an exchange of letters or in a contract indicating:

1. the scope of the affiliation;
2. the resources in the affiliate program which will be available to the house officer;
3. the duties and responsibilities the house officer will have in the affiliate program;
4. the relationship which will exist between house officers and staff of the affiliate and primary programs.

The needs of the house officer will not be met in such affiliations by his relegation to second-class status, such as observer or other relatively inactive or passive participant, and the Residency Review Committee will look with disfavor upon such arrangements if it appears that in the affiliate program the affiliating house officer is not fully absorbed into the prevailing pattern of instruction and patient care.

Staff: Of foremost importance in a successful graduate training program is the quality of supervision and evaluation of the clinical work of the house officers. An attending staff with professional ability, enthusiasm, and a sense of responsibility for teaching is essential. The director of the residency program must be capable of administering the program in an effective manner and be competent in the care of pediatrics patients. He/she should have demonstrated ability as a teacher and be knowledgeable in the related basic sciences and in research methodology. The director should be certified by the American Board of Pediatrics or should possess suitable equivalent qualifications. The faculty should contain similarly qualified teachers with diversified interests and expertise in clinical pediatrics and the basic sciences, and should be sufficient in number to meet the training responsibilities of the program. Qualified pediatric subspecialists provide highly desirable depth of teaching and facilitate the incorporation of new advances into the training program. The example set by dedication of the teaching staff to patient care is essential to the excellence of the educational program. Junior staff appointments, equivalent to chief residencies at the fourth-year or other advanced residency level, may be desirable in some programs. Such appointments may serve to provide better coordination and supervision of the educational and patient care programs.

Continuity of leadership over a period of years is important to the integrity of a program. The Committee feels that it is imperative that the program director assume full responsibility for supervision of the work of the department. When a change in program director occurs, the Committee must be notified promptly since appropriate reevaluation of the program must be undertaken.

The chief of the service must take responsibility for all educational programs, including any subspecialty programs, carried on in his department. All program descriptions submitted from his department must bear his original signature indicating his review and approval of the submitted programs.

It is desirable that the staff include qualified members of allied health professions, such as social service, physical therapy, psychology, nutrition and the like. Adequate numbers of qualified pediatric nurses are also essential.

Number of House Officers Appointed: The Committee does not designate the exact number of house officers which should be appointed to a program. If evaluation of a program discloses deficient or excessive patient loads, however, or if imbalances between supervisory and house staff are found, the program director will be so advised and correction will be expected.

Scope of Training and Facilities: Residency programs in pediatrics should be designed and organized to prepare physicians for comprehensive care of the pediatric patient, through a continuum of advancing educational experience and increasing patient care responsibilities. The degree of resident responsibility for patient care must be carefully advanced during the training years according to the individual's capabilities in order to develop necessary medical judgment and demonstrated competence.

Residents at all levels should be expected to provide care for the whole patient. The program should include a broad experience in all of the aspects of human growth and development from conception through fetal life, infancy, childhood and adolescence. Sufficient time must be devoted to studies in the basic sciences related to clinical pediatrics. The patient population served should encompass age groups from the newborn (including premature infants) through adolescence with respect to both therapeutic and preventive pediatrics. It is expected that accredited programs will include adequate training in the basic medical sciences, as well as in the clinical, laboratory, public health and community aspects of pediatrics.

The house officers should be exposed to pathologic conditions ranging from minor illness to life threatening conditions requiring intensive care. There should be experience with health supervision of the well child, diseases encountered frequently in office-based pediatric practice, psychological and social problems and problems which lie in subspecialty areas, both surgical and medical, involving chronic as well as acute or emergent conditions.

The inpatient and outpatient facilities must be adequate in size, variety and equipment necessary for a broad educational experience in pediatrics.

Ambulatory Services: A high quality of ambulatory pediatric care is essential to adequate training. Attainment of high quality requires the physical presence of supervising teachers in ambulatory settings where the patient load is kept at a level controlled to permit adequate teaching. An array of pediatric problems varying widely in variety and complexity should be included in the patient group cared for in the outpatient setting. Appropriate consideration should be given to the total environment including the psycho-social influences on, and needs of, the patient and family. Provision must be made for continuity between inpatient and ambulatory services.

Certain aspects of ambulatory care deserve special mention, and their implementation will be an important factor relative to the accreditation of training programs:

1. **Continuity Clinic (follow-up clinic):** This clinic provides experience with continuity of care for both house staff and patients. House officers should have weekly or biweekly assignment to the clinic, during which they should be relieved of other duties. Their patients should include those initially cared for by the resident on the ward or in the outpatient department, some well children of different ages and children with a variety of chronic diseases. Children with chronic, and often multiple, problems are in the greatest need of care such as

Pediatrics

this arrangement provides. Subspecialty consultants for these patients should be available to the house officers. They should designate who will see their patients when they are not available. The duration of this commitment should be for at least two years of training.

2. *Acute Illness Clinic and Emergency Room:* This rotation can be non-educational if inadequately supervised or if the patient load reaches a point where learning is compromised. On the other hand, high volume forces one to set priorities and facilitates development of accurate clinical judgment. The patient load should be kept reasonable with due consideration being given to the stage of training of the resident, the number of new patients versus return visits and the complexity of the problems. The duration of such an assignment should total at least three months over the three years of core training. Training in minor surgery and orthopedics should be included in this rotation.
3. *Specialty Clinics:* Special clinics should provide the house officer with experience in the role of a supervised consultant. It is strongly recommended that the resident have experience in dermatology, allergy, neurology, cardiology, psychology, developmental pediatrics, care of the handicapped and adolescence. Other desirable experiences include hematology, endocrinology, gastroenterology, pulmonary and renal disease, collagen diseases and learning problems. Where special clinics for patients with these problems do not exist, an equivalent exposure should be arranged.
4. *Preceptorships:* Office electives for preceptorships may constitute up to two months in either the second or third year of pediatric graduate education. Assignments may be solid blocks of time, or may run concurrently with other assignments on a part-time basis. Training programs incorporating this educational method should submit to the Residency Review Committee adequate descriptions of the content of these educational experiences and a short curriculum vitae for each supervising preceptor. Preceptors should be specifically designated by the director and chosen for their willingness and ability in teaching. The manner in which responsibility is delegated is important. House officers should be involved in decision-making processes, not merely function as observers. The house officer may advantageously accompany the preceptor on hospital visits. The resident's role in the management of inpatients should not, however, conflict with that of other house officers assigned to inpatient duty. A preceptee is not a *locum tenens* employed to substitute for a pediatrician temporarily absent from the office. A preceptor must be physically present to supervise the resident and assure the resident's continuing educational experience.

A house officer in a preceptorial relationship should be responsible for the maintenance of office records as well as for the management of patients assigned to him/her. The program director is responsible for the maintenance of records of preceptorial activities, including justification of the qualifications of the preceptor, evaluation of the house officer by the preceptor and evaluation of the preceptor by the house officer.

Quantitative Requirements: It is not considered feasible to establish numerical quotas of either inpatients or outpatients for house officers. A relatively small inpatient service may be offset by a sizeable outpatient department. Programs should have a sufficient number and variety of hospital patients to assure each house officer broad training and experience. There should be a sufficient number of residents at each level of the training program to provide intellectual interaction necessary for a stimulating, worthwhile educational experience. Hospital duties should not be so pressing or consuming that they preclude ample time for other important phases of the training program or for personal needs. On the other hand, it is equally essential that the resident staff have a keen

sense of responsibility for patient care. Night and week-end duty provides a valuable educational experience. Duty of this type not less than every fourth night and week-end on inpatient services is desirable.

Basic Science Teaching: Clinical rounds and conferences should correlate fundamental physiological, biochemical, microbiological, pathological and psychological aspects of disease in infancy, childhood and adolescence. Although departmental clinical faculty may have sufficient knowledge and expertise to provide satisfactory instruction, participation of basic scientists may increase the breadth and depth of the educational challenge. House officers should be encouraged to utilize basic science resources in the development of an understanding of the mechanisms of diseases and their management.

Laboratory, Radiology and Pathology Facilities: Laboratory, radiology and pathology services must be adequate to permit the house officer to obtain an educational experience during the care of his/her patients. The services should be available each day throughout the entire 24 hours. The percent of deaths in which autopsy is performed, and the use to which this activity is put, reflect the house officer's interest in observing post-mortem findings, the quality of the pathology service, and the intensity of the attending staff's interest in teaching.

Learning Experiences: The most important vehicle for learning is the assumption of meaningful responsibility by the house officer for arriving at his/her own diagnostic impressions, for consulting appropriate literature or other source material or persons, for developing plans for diagnostic studies and for writing orders. The resident must be involved, under supervision, in an adequate number and variety of procedures in order to develop appropriate skills. This assumption of responsibility must be carefully supervised by the pediatric faculty and attending physicians.

The most important formal teaching session is attending rounds conducted by a qualified teacher who is immediately available to the house officer for consultation and who is backed by a staff of consultants in subspecialty areas.

In addition to the teaching rounds at the bedside, there should be other regularly scheduled teaching assignments which the house officer is required to attend.

Conferences: In addition to regular departmental conferences, there should be available teaching sessions devoted to pathology, radiology, and various subspecialties such as hematology, cardiology, neurology, basic sciences, psychiatry and development. At least weekly, there should be an hour's meeting attended by both house staff and attending staff. House staff should be given the responsibility of presenting and discussing patient material or other subject matter. These conferences ought to involve the house officers actively (not be simply didactic), and should be conducted by highly qualified individuals, preferably with pediatric orientation.

Clinical Investigation and Research: Time consuming research projects at the expense of clinical learning should not be required for house officers in the relatively short core training program in pediatrics. Encouragement, supervision and needed facilities should, however, be placed at the disposal of the research-minded, insofar as circumstances permit.

Clinical investigation, such as the adequately supervised collection of data, review of pertinent literature, and preparation of a paper for presentation before a group, offers valuable experience that might well be a requirement for all house officers.

Medical Library: An adequate medical library should be readily available day or night. There should be an ample supply of current pediatric textbooks and journals. If library facilities are inadequate within the hospital, arrangements should be made for ready access to a larger medical library. Access to computerized literature search facilities is highly desirable.

Records: There can be no substitute for a well taken history and a carefully performed physical examination. On the basis of these two procedures alone, the house officer should record his/her impressions, and develop an initial study and management plan. The house officer's progress notes and final summary are a revealing index of the quality of his/her training. The medical record room should maintain a cross-indexing system that makes patients' charts readily available for review and study. The Committee recommends a unit record system for inpatient and outpatient charts.

Evaluation: Periodic evaluation of the educational progress of all residents is required. Residents should be encouraged to take a standard in-training examination at the beginning of the PL-1 and PL-2 years and, if performance is questionable or unsatisfactory, at the beginning of the PL-3 year. In-house evaluations, utilizing a variety of acceptable techniques, must be carried out on a recurring basis. These evaluations must be discussed with the resident and must be kept on file and be available for review.

Conclusion: Hospitals conducting accredited graduate training programs in pediatrics, or contemplating establishment of such programs, should be ever mindful that success for both teachers and students requires unselfish expenditure of time, effort, ability and enthusiasm to the end that the educational experience be of the highest possible quality.

Effective: May, 1980

LCGME: May, 1980

Training Programs in Pediatric Allergy*

The objective of intensive training in allergy is to fit the physician for the highest type of practice, teaching, and research in this specialty. An allergy residency should be at least one year, though preferably two years, of full-time work. Residents in allergy should be given a thorough training in the fundamentals of human and animal sensitization through clinical study and laboratory experiments. There should be daily conferences or consultations with the staff. Reading of current articles and reviews of special topics should be assigned. Residents should be given responsibility for diagnosis and management of various diseases of allergy and for the teaching of interns, medical students, and nurses, as capability has been demonstrated. Problems in clinical or laboratory allergy should be utilized to develop an interest in research.

If the allergy service is a separate department, it should have interdepartmental associations so arranged as to give residents of the allergy unit continuing contact with the pediatric (or general medical) services through ward rounds, clinicopathological conferences, staff meetings, and so forth. The service should admit 200 to 300 ambulatory patients yearly and have facilities for hospitalizing bed patients, in addition to cases seen in consultation with other services. It should have adequate laboratory facilities for those special chemical-immunological, pathological and bacteriological procedures required in its field. The training of residents in allergy should be arranged to fit into the established programs of the American Boards of Pediatrics or Internal Medicine. Candidates for positions offering specialized training in allergy should previously have fulfilled the basic requirements of the parent board before undertaking the study in the special field.

Certification in allergy is granted only to those who have previously fulfilled all the requirements for certification in pediatrics or internal medicine, including the examination.

The provisions of the General Requirements must also be

met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

Training Programs in Pediatric Cardiology

Residencies in pediatric cardiology should be closely associated with approved residency training programs in pediatrics, thereby assuring availability of all facilities and personnel necessary for the complete care of the infant and child. Thorough understanding of human growth and development and the response of the young patient to environmental factors, both intrinsic and extrinsic, is a fundamental prerequisite for the proper management of infants and children with cardiovascular problems. The purpose of a residency in pediatric cardiology is to equip the trainee to manage children with problems of a cardiovascular nature, whether congenital or acquired, in relation to the patient's rehabilitation and with emphasis on the adaptation of the whole individual rather than the specific disease process or the body system involved.

Duration of Training: Two years of training in an approved pediatric cardiology training center are required to meet the minimal standards of the Sub-Board of Cardiology of the American Board of Pediatrics. Training need not be confined to a single approved center, although it is essential that the resident who splits his training between two approved residencies in pediatric cardiology receive progressive education, experience and responsibilities in the specialty rather than two years as a beginner with virtual duplication of instruction at an elementary level.

Scope of Training: Residencies in pediatric cardiology should offer broad and inclusive training in the specialty. This should include fundamentals of clinical diagnosis with special emphasis on auscultation and physical examination and role of roentgenology and roentgenoscopy, electrocardiography, vectocardiography, phonocardiography and other laboratory tests used in diagnosis and management. Through understanding of embryology and anatomy of the normal heart and vascular system as well as the deviations from normal that may occur should be mastered. Knowledge of normal and abnormal cardiovascular physiology should be required. Experience and instruction in technics of and understanding of the limitations of cardiac catheterization and selective angiocardiography are necessary. Experience with pre- and post-operative care of patients having cardiac surgery, both by closed and open methods, in close cooperation with the cardiovascular surgical staff is required. Opportunity for long-term follow-up observation of post-operative patients must be afforded the trainee. Study of rheumatic fever and other infections and metabolic conditions resulting in abnormalities in cardiovascular function should be combined with experience in management of patients in sufficient numbers to demonstrate the typical and atypical features of each.

Basic Medical Sciences: The resident should be assigned for a period of service in pathology with instruction by a qualified pathologist. Specimens demonstrating the various types of congenital cardiovascular anomalies should be classified and readily available for study. Conferences involving current pathological material should be held regularly and closely correlated with clinical experience; such conferences should include clinicians, surgeons, physiologists, roentgenologists and pathologists. Thorough training in cardiovascular physiology is essential and participation by the resident in cardiac catheterization procedures is necessary. Such experience should be intimately related to clinical diagnosis and management. Regularly scheduled conferences involving clinicians, surgeons, roentgenologists and cardiovascular physiologists should be an integral part of the residency teaching program. Residency programs should provide ample opportunities for basic research, and participation in a specific laboratory or clinical research project should be encouraged.

*This Section of the Essentials will be deleted effective July 1, 1981. Therefore, no residency programs in Pediatric Allergy will continue in accredited status after that date. Accordingly, applications for accreditation of new residency programs in Pediatric Allergy will no longer be accepted. In the interim, accredited Pediatric Allergy programs are encouraged to meet the new "Special Requirements for Residency Training in Allergy and Immunology" and apply for accreditation in Allergy and Immunology.

Physical Medicine and Rehabilitation/Plastic Surgery

Staff: Highly qualified teachers should be available in pediatric cardiology as well as in roentgenology, pathology and physiology. The chief of service should be certified by the Sub-Board of Cardiology of the American Board of Pediatrics or, lacking such certification, should be of recognized ability and possess high professional standing in the specialty. The educational value of a residency depends largely on the quality and extent of supervision of the residents by teachers who are not only fully qualified but who are interested in teaching and willing to devote adequate time to this endeavor.

Clinical Material and Facilities: A satisfactory number of patients must be available to provide the resident with a wide variety of cardiovascular problems in children. While there is no need to perform special tests such as cardiac catheterization or angiocardiology on all patients with cardiac problems there should be a sufficient number of diagnostic problems to justify such procedures in an adequate number of patients per year, thus reflecting a reasonably large case load, in-patient and out-patient, during the course of a year. A minimum number of cardiac operations in children is required to provide depth of experience in pre- and post-operative management needed by a properly trained resident in pediatric cardiology. If these minimal numbers of special procedures and operations are reached or exceeded, the total number of clinical cases should be adequate for proper instruction of a resident.

Equipment, staff and availability of ancillary services such as good nursing care, properly staffed post-operative units, social service facilities, etc., should conform to the recommendations of the Council of Rheumatic Fever and Congenital Heart Disease of the American Heart Association in "Standards for Centers Caring for Patients with Congenital Cardiac Defects," published in *Circulation*, Vol. XXI, April, 1960.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

17. Special Requirements for Residency Training in Physical Medicine and Rehabilitation

Scope of Training: Residencies in this specialty should include training in the clinical and diagnostic uses of the physical procedures and in the various aspects of medical rehabilitation. The service is particularly concerned with the treatment and restoration of the convalescent and the physically handicapped patient. A complete program should include the availability and the use of the paramedical services related to the field.

Duration of Training: A minimum of three years of residency training is considered necessary to train a physician contemplating specialization in the field. It is desirable, if not essential, that the training be under the supervision of one approved institution. The Department of Physical Medicine and Rehabilitation should be organized as a major service, with a qualified head of the department and associates as well as trained personnel in the various paramedical areas. The department should operate as a service department to the broad fields of medicine and surgery. Sufficient space and equipment must be provided to carry out a comprehensive program of training. In order to provide complete training, it is necessary to have beds assigned. The number of beds on the Physical Medicine and Rehabilitation Service should be adequate to make training of this type meaningful.

Quantitative Requirements: To supply an adequate amount and variety of teaching material, there should be a minimum of 500 admissions and 7,500 patient visits annually.

The trainee should have the opportunity to learn to become proficient in prescribing and supervising all types of physical therapy, occupational therapy, and rehabilitative procedures for outpatients as well as patients on the hospital

services. There should be an experience in evaluation, including electromyography and other electrodiagnostic procedures, and care of patients having conditions or disabilities such as may be seen in all phases of medical practice. There should be the opportunity for learning to co-operate with and utilize the services of other medical specialists and paramedical personnel.

Applied Basic Science Instruction: Training in the allied basic sciences should be closely correlated with the clinical experience. Training in these subjects should be on a graduate level and include functional anatomy and kinesiology; physics, including radiation physics related to the field; electronics and instrumentation; physiology as applied to the various physical agents, particularly; and pathology.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

18. Special Requirements for Residency Training in Plastic Surgery

Duration of Training: Residency training in Plastic Surgery must be for a minimum of two years. The residency program must be accredited by the LCGME on recommendation of the Residency Review Committee for Plastic Surgery. If a Plastic Surgery residency is accredited for three years (rather than two), the trainee must complete all three years of that program.

Prerequisite Graduate Education: The minimum prerequisite for a Plastic Surgery residency is three years of formal training in General Surgery in a program accredited by the LCGME on recommendation of the Residency Review Committee for Surgery. Of the required three years of approved training in General Surgery, a minimum of twenty-four months must be spent in clinical surgery. It is to be emphasized that the minimum required General Surgery training must be completed prior to entering a Plastic Surgery residency.

Prerequisite training may be accomplished in other ways, such as completion of an accredited residency in Otolaryngology, Orthopedic Surgery, Urologic Surgery or Neurological Surgery.

Individuals who plan to seek certification by the American Board of Plastic Surgery should communicate with the Secretary of that Board regarding full requirements for certification, including acceptability of prerequisite surgical training. This inquiry should be made prior to starting a Plastic Surgery residency.

Faculty and Staff: The Director of an accredited program should be certified by the American Board of Plastic Surgery or possess suitable equivalent qualifications. The faculty or attending staff should possess qualifications that contribute to the training program and should be willing to devote a significant period of time to the educational process of the residency.

Scope of Training: Training should cover a wide field of Plastic Surgery. It should include experience in management of congenital and acquired defects of the face, trunk, and extremities. This would encompass experience in the management of head and neck neoplasms, facial fractures and other trauma, cosmetic surgery, surgery of the hand, management of burns and the complications of burns. Resident involvement in patient management should be a graduated and progressive responsibility. A program director may increase the volume and variety of patients a resident is exposed to by rotating the resident through another service where training in the areas included in the wide field of Plastic Surgery is offered. Any rotation(s) outside of the accredited program totaling more than three months in a two year period require specific approval.

Applied Basic Science: The period of specialized training should emphasize the relationship of basic sciences to surgical principles fundamental to all branches of surgery and especially Plastic Surgery.

Didactic Program: Selected conferences should be regularly attended by residents and attending staff to allow for a discussion of topics selected to broaden their knowledge in Plastic Surgery. These might consist of Cleft Palate Clinics, Journal Club, Pathology Conference, Hand Conference, Review of Burn Care and Head and Neck Neoplasms, and other such conferences.

Evaluation of Educational Program: The knowledge and progress of each resident should be evaluated each year. The results of these periodic assessments of evaluations should be communicated to the residents so that remedial steps can be recommended. These evaluations should serve to designate deficiencies to be corrected prior to completion of the residency.

Effective: Nov. 1979

LCGME: Nov. 1979

19. Special Requirements for Residency Training in Preventive Medicine

- I. Preventive Medicine is a specialized field of medical practice:
 1. The primary focus of which is health and disease as these occur in communities and in defined population groups.
 2. Which seeks to promote those practices with respect to the community and the individual which will advance health, prevent disease, make possible early diagnosis and treatment and foster rehabilitation of those with disabilities.
 3. In addition to the basic knowledge and skills required of a physician, the basic disciplines of the specialty are biostatistics, epidemiology, administration, and environmental sciences.
- II. Preventive medicine as a specialized field of medical practice is conceived to have a common group of basic components, whatever the specific subspecialty or area of practice. These components are listed below. It is obvious that a given component may be of major importance in some areas of practice and of relatively minor importance in others, but all are represented in some measure in each area.
 1. Biostatistical principles and methodology.
 2. Epidemiological principles and methodology.
 3. Planning, administration and evaluation of health and medical programs.
 4. Environmental hazards to health and principles of their control.
 5. Social, cultural and behavioral factors in medicine.
 6. Applications of primary, secondary and tertiary preventive principles and measures in clinical practice, including genetic factors in disease and disability.

To acquire this knowledge and these skills, graduate education in Preventive Medicine shall include three years, one of which shall be an academic year, one a clinical year, and one a year of practical training.

Residencies in Preventive Medicine are accredited by the Liaison Committee on Graduate Medical Education upon the recommendation of the Residency Review Committee for Preventive Medicine.

While not all the provisions of the section on "General Requirements" are directly pertinent to residencies in Preventive Medicine, the underlying principles do apply and should be followed.

Training Programs in General Preventive Medicine

Residencies in preventive medicine should be organized on a broad basis to furnish instruction in the various special fields which combine to form the foundation of the total field of

preventive medicine. Any given residency may place emphasis upon a special field, e.g., epidemiology. Residency training in preventive medicine may be offered by Schools of Public Health, organized Departments of Preventive Medicine in Medical Schools, other appropriate Graduate Schools in Universities, or other appropriate institutions or agencies in which an established component of their program is the graduate training of physicians. Institutions seeking approval of residency training in preventive medicine must provide evidence that the resident in training is assured of a supervised, comprehensive and progressively graded educational experience over a period of at least three years. One institution or agency, preferably one with a primary interest in graduate education, must assume overall responsibility for directing and supervising the preventive medicine residency training program. The residency program need not be encompassed within a single institution or agency, however, but may be constructed by formal programming and coordinated supervision of the educational and training experience of the residency by two or more institutions or agencies.

A formal training program in General Preventive Medicine should include:

1. A graduate year of clinical training and experience involving direct patient care.
2. A year of academic training in the fundamental disciplines of Preventive Medicine and Public Health.
3. A graduate year of planned and supervised experience in a residency program approved for General Preventive Medicine.

A fourth year of training, teaching, practice and/or research in General Preventive Medicine is required before a candidate becomes eligible to take the Board examinations.

Clinical Training: A clinical year should provide experience in direct patient care including ambulatory and inpatient experience. This clinical year can be provided in an accredited program in one of the recognized clinical specialties or through a clinical year sponsored by Preventive Medicine.

If it is a Preventive Medicine clinical year, it must provide experience in direct patient care and include at least four months of Internal Medicine and three months in a hospital setting.

Academic Training: Courses should be such as to satisfy requirements for the Master of Public Health Degree or its equivalent. These courses should include the following fields:

1. Epidemiology: the study of disease and injury in human populations, the factors contributing to increase or spread, and means of control.
2. Public health administration or practice: organization and administration of programs for promotion of health.
3. Evaluation and control of environmental hazards.
4. Statistical methods applicable to the study of disease or injury and the evaluation of control procedures.
5. Such other subjects as may be required for the Master of Public Health Degree or equivalent and such desired elective subjects as may be applicable to General Preventive Medicine.

These academic requirements may be met before or after graduation from medical school, or by course work taken in conjunction with the medical curriculum.

Field Training: In selecting field training experience for the resident, the training institution may use a field training area partially or entirely under its own jurisdiction and supervision or it may use an affiliated organization or agency most suitable to the needs of the individual resident. The resources and organization of the affiliated agency must satisfy basic requirements for graduate training purposes; the caliber of supervisory professional staff members and their competence and interest in residency level training should be the determining factors in the assignment of residents to their charge.

Facilities: The facilities of the training institution need not conform to any rigid pattern; educational institutions, research centers or operating agencies may qualify, provided

Occupational Medicine/Aerospace Medicine

the residency program is appropriately affiliated with and supervised by an accredited academic institution. A plan of affiliation between two or more of these categories will be necessary in most instances. In every case, the combination must provide:

1. An educational environment capable of providing the breadth of instruction outlined above;
2. Laboratory space, supplies, and technical assistance for research by the resident;
3. A well-stocked, up-to-date medical library;
4. Facilities for field training of sufficient size and scope to provide experience in each of the major areas of preventive medicine and to exemplify good administrative organization. The staff members associated with residency programs should have demonstrable interest in and capacities for teaching, as well as high competence in their respective fields.

Personnel and Organization: The Director of the residency training program should be qualified in preventive medicine and have established competence in teaching and graduate training. There should be at least one person on the training staff who has established competence and continuing experience in each of the major fields of instruction. The training staff members should be selected by the Director and should be directly responsible to him for their participation in the program. There should be specific commitments concerning the time to be contributed by each staff member and the content of training which he is to provide. There should be a Residency Advisory Committee composed of the Director and the heads of the departments primarily concerned with the training of the resident, and selected consultants. This Committee should concern itself with the development, content and improvement of the training program, the policies, procedures and conduct of the program inclusive of instructional techniques, and the periodic evaluation of all phases of the resident's training. It should report periodically, at least annually, to the head of the training institution.

Training Programs in Occupational Medicine

A formal training program in Occupational Medicine should include:

1. Academic training in the fundamental disciplines of Preventive Medicine and Public Health.
2. Training and experience in the basic clinical sciences related to Occupational Medicine.
3. Clinical training and experience involving direct patient care.
4. Training in the Administration of Occupational Medicine programs.

The formal residency training program should be of at least three years' duration. One year should be devoted to academic study in Preventive Medicine and Public Health. The clinical year should provide experience in direct patient care including ambulatory and inpatient experience. Another year should be devoted to training and experience-related Occupational Medicine programs, including the administrative aspects of such programs. The order in which these elements are provided can be varied.

The residency should include an academic component and an applicatory component; the entire residency should normally be under the sponsorship of a medical school or a school of public health. Under such sponsorship and direction, an approved industrial organization may serve as the site for the year of practical training and experience in Occupational Medicine.

Academic Program: Courses should be such as to satisfy requirements for the Master of Public Health Degree or its equivalent. These courses should include the following fields:

1. Epidemiology; the study of disease and injury in human populations; the factors contributing to increase or spread, and means of control.

2. Public health administration or practice; organization and administration of programs for promotion of health.
3. Evaluation and control of environmental hazards.
4. Statistical methods applicable to the study of disease or injury and the evaluation of control procedures.
5. Such other subjects as may be required for the Master of Public Health Degree or equivalent and such desired elective subjects as may be applicable to Occupational Medicine.

Applicatory Program: The residency should provide approved clinical training involving direct patient care and didactic training and experience in the principles of Preventive Medicine as applied to Occupational Medicine, the environments in which they work, and the protection of all concerned from the hazards which may be encountered.

The clinical training component should provide a variety of patients and responsibility for comprehensive evaluation and treatment in a supervised clinical setting. The didactic component should cover:

1. Environmental physiology: responses of the body to changes in temperature, noise, and other stresses related to work environment.
2. Selection and appropriate placement of workers.
3. Maintenance of physical and emotional health of workers.
4. Toxicology: basic principles, clinical management and prevention of health problems associated with chemical agents in the work environment.
5. Industrial hygiene: principles of evaluation and control of toxic or physical agents in the work environment.
6. Safety, including accident prevention and medical support of accident investigation.
7. Interpretation of laboratory data from either biological or environmental monitoring and their application to medical surveillance.

The program should provide an opportunity for the planned and supervised application of the knowledge and concepts of Preventive Medicine and Occupational Medicine gained in the didactic phases of the program. The program should impose definite responsibilities upon the resident. It should encompass experience in the following fields:

1. Clinical Occupational Medicine: diagnosis, prevention and treatment of disorders arising from work, and the evaluation of fitness to continue at work in specific jobs. This will require some knowledge of job requirements.
2. Administrative Occupational Medicine: planning, administration and supervision of a broad health program for workers, including worker's compensation and the regulatory requirements under the Occupational Safety and Health Act.

The entire residency training program should be under the supervision of a Director of Training who is certified, or otherwise qualified, in Occupational Medicine and a Residency Advisory Committee. The professional qualifications of the Director of Training should meet the standards required of the staff of institutions approved for residency training in other specialties (General Requirements, Section 1). The Committee should be made up of persons of recognized capabilities in Occupational Medicine and/or related medical fields. Should the practical year be arranged in an industrial organization, the resident should during such period be under the direct supervision of an individual certified or otherwise qualified, in Occupational Medicine and/or a related clinical specialty. Under these circumstances, the supervisor should be furnished a clearly defined statement of the program to be followed by the resident during the period of affiliation.

Training Programs in Aerospace Medicine

A formal training program in Aerospace Medicine should include:

1. Academic training in the fundamental disciplines of Preventive Medicine and Public Health.

2. (Applicatory component) Training and experience in the basic clinical sciences related to aerospace operations and ground support.
3. Clinical training and experience involving direct patient care.
4. Training in the Administration of support of Aerospace Medicine programs.

The formal residency training program should be of at least three years' duration. One year should be devoted to academic study in Preventive Medicine and Public Health. The clinical year should provide experience in direct patient care including ambulatory and inpatient experience. Another year should be devoted to training and experience related to aerospace operations, ground support of flight operations and the administrative applications of Aerospace Medicine programs. The order in which these elements are provided can be varied.

The residency program, including the academic and applicatory components, should normally be under the sponsorship of a school of aerospace medicine, a medical school, a school of public health, or a graduate school. An approved government or civilian agency or institution may also serve as the agency responsible for residency training. The sponsoring organization should normally be responsible for the maintenance of the health of a sufficiently large number of flying and ground support personnel to provide the residents with broad experience in the various phases of the specialty. There should be a sufficient amount and variety of aeronautical equipment available to enable the resident to familiarize himself with its use. A well-staffed hospital to which aerospace medicine problems are referred should be available. If not, such training should be provided through affiliation. Experience in the examination, care, and management of ambulatory patients should be provided through the facilities of an adequately staffed and well-equipped outpatient department. The agency should have access to an adequately equipped laboratory in which studies on problems relating to aircraft accidents and hazards of flight can be carried out. The applicatory component may be secured in another agency affiliated with the sponsoring organization.

Academic Program: Courses should be such as to satisfy requirements for the Master of Public Health Degree or its equivalent. These courses should include the following fields:

1. Epidemiology: the study of disease and injury in human populations, the factors contributing to increase or spread, and means of control.
2. Public health administration or practice: organization and administration of programs for promotion of health.
3. Evaluation and control of environmental hazards.
4. Statistical methods applicable to the study of disease or injury and the evaluation of control procedures.
5. Such other subjects as may be required for the Master of Public Health Degree or equivalent and such desired elective subjects as may be applicable to Aerospace Medicine.

Applicatory Program: The residency should provide clinical and didactic training and experience in the principles of preventive medicine as applied to flying personnel, those engaged in ground support of flight or aerospace operations, the environments in which they work, and the protection of all concerned from the hazards which may be encountered.

The clinical training component should provide a variety of patients and responsibility for comprehensive evaluation and treatment in supervised clinical setting, including the following topics in clinical Aerospace Medicine: diagnosis, prevention, and treatment of disorders resulting from flight or ground support activities; evaluation of disorders having a bearing on capabilities or qualification for duties in aviation or ground support.

The didactic component should cover the following subjects:

1. Aviation physiology: responses of the body to changes in temperature, pressure, and ambient gas tensions,

acceleration forces, and other stresses occasioned by aeronautics and space flight.

2. Selection of aircrews: medical examination and selection of persons to be trained for flying or other aerospace activities.
3. Maintenance of aircrews: recognition, prevention and treatment of disorders related to flight; influence of specific disorders on fitness for flying; consideration of these problems from viewpoints of clinical specialties such as internal medicine, surgery, ophthalmology, otorhinolaryngology, neurology and psychiatry.
4. Flying safety, including accident prevention and medical support of accident investigation (aviation pathology).
5. Environmental (including toxicologic) hazards faced by flyers and ground support workers; devices, equipment, and procedures for protection of personnel concerned.
6. Aerial transportation of patients: contraindications for air travel by patients; medical problems in movement of patients by air.
7. Human factors, medical aspects of design of flight systems and equipment, and medical problems pertaining to man-machine interfaces.

The program should provide an opportunity for the planned and supervised application of the knowledge and concepts of preventive medicine and aerospace medicine gained in the didactic phases of the program. Finally, concepts in administrative aerospace medicine should be considered, including: planning, administration and supervision of a broad health program for flight and/or ground support personnel. Significant responsibilities should be assumed by the resident. The training may be in a civilian or military organization having responsibility for the health of a reasonable number of flight personnel and/or personnel concerned with ground support of aeronautical or space operations.

The entire residency training program should be under the supervision of a Director of Training who is certified, or otherwise qualified, in Aerospace Medicine. The professional qualifications of the Director of Training should meet the standards required of the staff of institutions approved for residency training in other specialties (General Requirements, Section 1). The Committee should be made up of persons of recognized capabilities in Aerospace Medicine and/or related medical fields. Should any portion of the program be arranged through affiliation, the resident should during such period be under the direct supervision of an individual certified in Aerospace Medicine and/or a related clinical specialty. Under these circumstances the supervisor should be furnished a clearly defined statement of the program to be followed by the resident during the period of affiliation.

Training Programs in Public Health

A formal training program in Public Health should include:

1. A graduate year of clinical training and experience in direct patient care.
2. A year of academic training in Preventive Medicine and Public Health.
3. A year of planned and supervised field training and experience.

Clinical Year: A clinical year should provide experience in direct patient care including ambulatory and inpatient experience. This clinical year can be provided in an accredited program in one of the recognized clinical specialties or through a clinical year sponsored by Preventive Medicine.

If it is a Preventive Medicine clinical year, it must provide experience in direct patient care and include at least four months of Internal Medicine and three months in a hospital setting.

Academic Year: Courses should be such as to satisfy requirements for the Master of Public Health Degree or its equivalent. These courses should include the following fields:

Psychiatry

1. Epidemiology: the study of disease and injury in human populations, the factors contributing to increase or spread, and means of control.
2. Public health administration or practice: organization and administration of programs for promotion of health.
3. Evaluation and control of environmental hazards.
4. Statistical methods applicable to the study of disease or injury and the evaluation of control procedures.
5. Such other subjects as may be required for the Master of Public Health Degree or equivalent and such desired elective subjects as may be applicable to Public Health.

Field Training and Experience: The year of supervised training and experience should be provided in a health department and should include all aspects of general public health practice, including communicable and chronic disease control, community health organization (public, private, and professional), medical care administration, health protection and promotion, maternal and child health (including school health), environmental health and sanitation, mental health, epidemiology, dental health, health education, public health nursing, health care services in homes and nursing homes as well as hospitals, program planning, health legislation, and fiscal, personnel, and administrative policies and procedures.

Residency training in Public Health may be provided by a state health agency, a large and well organized local health agency, a federal health agency, a school of public health or a medical school.

The health agency in which field training is given should be well-established and should serve an area large enough to offer comprehensive experience in the several aspects of community health. A program of sufficient scope and diversity is not likely to be provided in communities of less than 50,000 population.

The agency should be efficiently organized on a basis which will assure the provision of public health services of a superior quality as well as proper supervision of residents' training. It should cooperate actively with other agencies, official and non-official, in the development and conduct of a community-wide program.

The facilities of the health agency, including office, and laboratory space, should be adequate for the efficient functioning of the public health service. When the work of the resident involves considerable travel, adequate transportation should be provided. The agency should maintain a basic collection of reference texts and periodicals in Public Health and associated fields, even if more complete library facilities are available outside the agency.

An efficient system of records must be maintained. Since much of the resident's later responsibility is likely to be administrative in nature, it is essential that he has a thorough indoctrination in the preparation and maintenance of reports, registers, and other required records.

The residency program should be under the direction of a qualified physician (certified by the American Board of Preventive Medicine or otherwise qualified) who has demonstrated his ability to administer a comprehensive program. His professional qualifications should meet the standards required of the staff of hospitals approved for residency training in other specialties (General Requirements, Section 1). His staff should include a sufficient number of well-trained personnel to provide adequate health service to the community and assistance in the training program. Additional consultative service in the several basic and special public health fields should be available.

There should be an affiliation agreement with a school of medicine or public health that assures an educational partnership in the conduct of the residency programs. This action should be considered to be effective June 1, 1980.

Residents who plan to seek certification by an American board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

20. Special Requirements for Residency Training in Psychiatry and Neurology

Residencies in Psychiatry and Neurology are offered separately.

Training Programs in Psychiatry

I. Introduction

An approved residency program in psychiatry must demonstrate that it provides an educational experience of such quality and excellence as to assure that its graduates will possess mature clinical judgment and a high order of knowledge about the diagnosis, etiology, treatment, and prevention of all psychiatric disorders and the common neurological disorders. While residents cannot be expected to achieve in three years of training the highest possible degree of expertise in all of the diagnostic and treatment procedures used in psychiatry, those individuals who satisfactorily complete residency programs in psychiatry must be competent to render effective professional care to patients. Furthermore, they must have a keen awareness of their own strengths and limitations and of the necessity for continuing their own professional development.

The philosophy and organization of the residency program should make the resident aware that there are no short cuts to clinical competence, and no substitutes for hard individual study. The initiative and originality of all residents should be stimulated; their independence of mind promoted; and their ability to appraise critically the various schools of thought about human behavior should be encouraged.

Both the didactic and clinical curriculum must provide a thorough and well balanced presentation of all of the generally accepted theories, schools of thought, and diagnostic or therapeutic procedures in the field of psychiatry and it must avoid indoctrinating residents in any single point of view. Thoughtful and informed appraisal of all of the major theories and viewpoints in psychiatry, together with a thorough grounding in the generally accepted facts, are fundamental to a sound professional education.

With rare exceptions, only those programs are eligible for approval which:

- (1) Currently provide at least three years of residency education and as of July 1, 1977, provide four years of graduate education following receipt of the M.D. degree. (See regulations of the American Board of Psychiatry and Neurology.¹)
- (2) Are conducted under the sponsorship of a hospital which meets the General Requirements that apply to residency programs in all specialties as outlined in Sections I, II, III, and IV of Accredited residencies;
- (3) Meet all of the Special Requirements of Residency Training in Psychiatry.

Under rare and unusual circumstances programs of either one year or two years duration may be approved, even though they do not meet all of the General Requirements or all of the Special Requirements for Psychiatry. Such one- or two-year programs will be approved only if they provide some highly specialized educational program of great excellence and outstanding value.

A minimum number (or "critical mass") of residents should be enrolled in a program at all times in order to insure the

¹The regulations of the American Board of Psychiatry and Neurology, referred to in (1) above state that two patterns of training are acceptable:

- a. Prior to entering an approved Psychiatry or Neurology training program, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine. This year of clinical experience should emphasize internal medicine or pediatrics or family practice.
- b. A four-year training program in Psychiatry or in Neurology would be acceptable with the provision that at least one year be spent in an approved program providing direct responsibility for the general medical care of children and/or adults.

stimulating educational atmosphere that a good peer group provides. It is impossible to define exactly how many residents constitute the "critical mass" necessary to maintain the vitality of a program and insure a satisfactory educational climate. However, all programs must have at least two trainees in each year of training at all times if the program is to maintain full approval. Failure to recruit any new trainees for two consecutive years will result in disapproval of the program.

II. Educational Programs

Formal educational activity shall have high priority in the allotment of the resident's time and energies. The clinical responsibilities of residents must not infringe unduly on didactic educational activities and formal instruction.

However, the clinical care of patients is the heart of an adequate program since the chief objective of residency education is the development of a high order of clinical competence in its graduates. The attainment of this chief objective must not be attenuated by the participation of residents in other activities such as hospital administration, ward management, the teaching of other hospital personnel, or research. Nevertheless, residents should obtain adequate and supervised experience in administration, ward management and teaching (hospital personnel, more junior residents, medical students, etc.).

Residents should also learn about research methodology, and develop the ability to appraise critically professional and scientific literature. Approved programs should provide opportunities for actual participation in clinical or basic research by residents, but, at the same time, research activity should not interfere with the development of clinical competence or residents.

Clinical and didactic teaching must be of sufficient breadth to insure that all residents become thoroughly acquainted with the major methods of diagnosis and treatment of mental illness which are recognized as significant both in this country and abroad.

Didactic instruction must be well organized, thoughtfully integrated, based on sound educational principles, and carried out on a regularly scheduled basis. In a progressive fashion it should expose residents to topics appropriate to their level of training. Systematically organized formal instruction (prepared lectures, seminars, assigned reading, etc.) must be an essential part of the residency. Staff meetings, clinical case conferences, journal clubs, and lectures by visitors are desirable adjuncts, but must not be used as substitutes for an organized didactic curriculum.

The faculty must provide instruction to help the resident develop the ability to interview patients effectively, to perform a comprehensive psychiatric examination and evaluation of mental status, to write histories clearly and in good detail, to produce a meaningful continuous record of the patient's illness, background and course of treatment, and to present or discuss the case in a lucid and thoughtful manner.

All residents must participate to a significant degree in regularly scheduled clinical case conferences in which the resident is responsible for presenting case material and discussing the relevant theoretical and practical issues. A significant proportion of the psychiatrists, psychologists, and other mental health professionals on the full-time faculty should attend these conferences as well as the residents and other personnel who have responsibility for the care of patients.

The curriculum must include adequate and systematic instruction in such basic sciences relevant to psychiatry and neurology, and neuroanatomy, neurophysiology, neuropathology, neurochemistry, pharmacology, genetics, psychopathology, nosology, psychodynamics, and sufficient material from the social and behavioral sciences (such as psychology, anthropology, sociology) to help the resident understand the importance of economic, ethnic, social and cultural factors in mental health and mental illness. The curriculum must also provide a thorough grounding in medical ethics and in the history of psychiatry and its relation to the evolution of modern medicine.

The clinical portion of the curriculum must provide experience in:

- (1) Psychiatric care of adults, children, and adolescents in both inpatient and outpatient settings;
- (2) Clinical psychophysiology or psychosomatic medicine;
- (3) Psychiatric consultation or liaison psychiatry involving patients hospitalized on other clinical services such as pediatrics, medicine, surgery, obstetrics and gynecology;
- (4) Hospital emergency room (or some equivalent experience in emergency care);
- (5) Crisis intervention;
- (6) Community psychiatry;
- (7) Neurology; and
- (8) Forensic psychiatry.

The clinical services must be organized so that residents have basic responsibility for the care of a significant proportion of all patients assigned to them, and so that they have an appropriate amount of supervision by the staff. Residents must have the major responsibility for the diagnosis and treatment of a reasonable number of patients suffering from all of the major categories of psychiatric illness and ample experience in the diagnosis and management of the more common neurological disorders. They must have experience in the care of patients of both sexes, patients of various ages from childhood to senility, and patients from a wide variety of ethnic, social and economic backgrounds.

Clinical training must include regularly scheduled individual supervision and teaching rounds. In addition, all programs should provide some scheduled time for residents to pursue individually chosen electives.

The amount and type of basic responsibility for patient care that a resident assumes must increase as the resident advances in training. Responsibility must at all times be commensurate with the resident's abilities and clinical competence.

The training program must include a significant amount of time spent in the care of hospitalized patients. It is recommended that residents devote at least one-third of their resident experience to work with hospitalized patients. It is undesirable for a program to devote more than two-thirds of a resident's time to the care of hospitalized patients.

The number of patients in the care of a resident at any one time must be sufficiently small to permit adequate study and treatment of each patient on an individual basis. At any given time the resident should have primary clinical responsibility for no more than approximately 20 inpatients.

Clinical assignments for residents must provide experience in the continuous care of a significant number of patients (approximately ten) for at least a year or more. A portion (approximately five) of the patients for whom the resident has responsibility for such continuous care must be patients suffering from chronic psychotic illnesses.

A significant amount of the resident's clinical work must involve active collaboration with psychologists, psychiatric nurses, social workers and other professional and paraprofessional mental health personnel.

Diagnostic skills in psychiatry should include active familiarity with all the generally accepted psychometric techniques and instruments. A reasonable amount of the resident's clinical work must involve the use of the more common psychological test procedures sufficient to give the resident an understanding of the clinical usefulness of these procedures, and the correlation of psychological test findings with clinical data. Under the supervision of a qualified clinical psychologist residents should have some experience in the administration, scoring, and interpretation of the psychological tests in most common use. Some of the experience residents have in administering psychological tests should be with their own patients.

Through the didactic and clinical curriculum, the program must provide all residents with sound instruction and clinical experience in neurology. The psychiatry resident must be able to obtain a thorough history regarding neurological disease, perform a competent neurological examination, make a

Psychiatry

differential neurological diagnosis, and under supervision, plan and carry out the treatment of the common, clinically important neurological diseases. This requires a substantial and specific assignment during which each resident has clinical responsibility for the diagnosis and treatment of neurological patients. This requirement is particularly important because of the natural blend of the manifestations of psychiatric illness and neurological disease, and the frequent complications of one by the other.

The curriculum must involve a significant number of clinical conferences and didactic seminars in which psychiatric faculty members collaborate with neurologists, internists, and colleagues from other medical specialties.

The clinical training in community psychiatry should include experience in a community mental health center or some equivalent setting, and consultation to at least one community agency such as a school, court, or police department.

Training in forensic psychiatry must involve more than solely didactic instruction. It should include supervised clinical experiences such as consultative work with judges, attorneys, police, probation officers, and other professionals in the legal field, and, wherever possible, actual experience in courtroom testimony.

All programs must contain substantial didactic education and supervised clinical experience in the inpatient and outpatient treatment of children and adolescents. The resident should gain a thorough understanding of the biological, psychological, social, economic, ethnic and family factors that significantly influence physical and psychological development in infancy, childhood, and adolescence.

III. Director of Residency Program and Participating Faculty

Each residency program must be under the direction of a fully qualified psychiatrist whose primary responsibility on the staff is to maintain an educational program of excellence.

The training director should be responsible for maintaining:

- (1) A process for selecting as residents physicians who are personally and professionally suited for training in psychiatry;
- (2) Well-planned and systematic educational activities of excellent quality;
- (3) Regular and systematic evaluation of the progress of each resident, including complete records of evaluations containing explicit statements on the resident's progress and his major strengths and weaknesses;
- (4) A program of regularly scheduled meetings with each resident, of sufficient frequency, length and depth to insure that the resident is continually aware of the quality of his progress toward attainment of professional competence;
- (5) Procedures for helping the resident obtain appropriate help for significant personal or professional problems;
- (6) Procedures for the proper and judicious resolution of problems that occur when a resident's performance does not meet required standards. These procedures should be fair to the resident, the patient under his care, the training program, and to the profession; and
- (7) A written record of the educational responsibilities of all staff and faculty members (whether full-time or part-time) who participate directly in the education of residents, including the nature, frequency, and amount of time involved in the teaching activity of each.

The residency program director must accept only those applicants whose qualifications for residency include sufficient command of grammatical English to insure accurate, unimpeded communication with patients and teachers. All residents must have continuous review and assessment of their language and other communication skills needed to treat effectively the patients for whom the resident has clinical responsibility during his residency. Appropriate records must be kept regarding the communication skill of all residents and special instruction must be offered, when indicated, in order

to assure that every resident develops a high order of competency in communication skills, skills so crucial to developing professional competence in psychiatry.

The residency program should provide its residents with instruction about American culture and subcultures. Many physicians may not be sufficiently familiar with the attitudes, values and social norms prevalent among the various segments of contemporary American life. Therefore, the curriculum should contain instruction about these issues adequate to enable the resident to render competent care to those patients from various cultural backgrounds for whom he has clinical responsibility in the course of his residency.

The residency program director must regularly and continuously make a significant commitment of time to the educational program, and preferably will be a full-time staff member. In any case, the director must be at least a half-time staff member, must devote a significant number of hours weekly to the residents and their educational program, and should be a board certified psychiatrist, although under unusual circumstances exceptions may be allowed to this later qualification.

The residency must be staffed by qualified full-time psychiatrists in sufficient numbers to insure constant supervision and consistent instruction. They should be highly competent clinicians and capable, interested teachers in order to assure an educational program of excellence and breadth of view. These teachers must participate regularly and systematically in the training program, and be readily available for consultation whenever a resident is faced with a major therapeutic or diagnostic problem, a clinical emergency, or a crisis in patient care. The part-time faculty must also have specifically designated teaching responsibilities in which they engage with appropriate regularity.

There must be a sufficient variety of competent faculty members to provide the residents with instruction and supervision in all of the major types of therapy including:

- (1) Individual psychotherapy (including some experience in long-term therapy);
- (2) Family therapy;
- (3) Crisis intervention;
- (4) Group therapy;
- (5) Pharmacological therapy;
- (6) Physiological therapies; and
- (7) Selected special techniques such as behavior therapy, hypnosis, biofeedback, etc.

In addition to qualified psychiatrists in appropriate numbers, the faculty should also include representatives of all the other major mental health-related disciplines.

The director of the residency program should have an educational policy committee, composed of members of the teaching staff and including representation from the residents. This committee should participate actively in planning, developing, implementing, and evaluating all significant features of the residency program, including selection of residents, determining goals and objectives of the curriculum, and evaluating both the teaching staff and resident staff.

IV. Clinical and Educational Facilities and Resources

Training programs must have available to them an array of inpatient and outpatient facilities, clinics, agencies and other suitable placements where the residents can participate in the clinical experiences they require to develop competence.

The administrators of the hospital responsible for the programs must provide ample space and equipment for educational activities. There must be adequate space and equipment specifically designated for seminars, lectures, and other teaching exercises. Both office space and teaching space for residents must be available in addition to that designated for hospital laboratories, ward care, and the treatment of patients.

All residents must have offices adequate in size and decor to allow them to interview patients in a professional manner. This office space must not be shared by so many people as to interfere with their professional educational experience.

The hospital must also provide adequate and specifically designated facilities in which residents can perform basic physical examinations and other necessary diagnostic procedures.

The program should have available such basic teaching aids as slide projectors, sound film projectors, and the capability for making and playing back video tapes.

The sponsoring institution of an approved residency in psychiatry must provide residents with ready access to a library that contains a substantial number of current basic textbooks in psychiatry, neurology and general medicine, and a sufficient number of the major journals in psychiatry, neurology and medicine, necessary for an educational program of excellence. The library must have the capability of obtaining textbooks and journals on loan from major medical libraries, and must be reasonably available to trainees on weekends and during evening hours.

Training Programs in Child Psychiatry

Essential elements for approved residency training in Child Psychiatry are generically similar to those in general psychiatry (see the Special Requirements of the Essentials for Residency Programs in Psychiatry). The training program should offer a well-balanced patient load, adequate supervision, and a formal educational experience to provide a combination of training and practice which will be both broad enough to insure familiarity with the variety of childhood disorders, and intensive enough to insure basic treatment skills. Consultative experience is also essential.

Essential requirements for approved training for the career child psychiatrist consist of a minimum of a two-year block of time of training in general psychiatry together with two years of specialized training in child psychiatry. This is in addition to the categorical, categorical* or flexible first year of post M.D. training. To achieve greater flexibility in the sequence of training for the career child psychiatrist and to assist in recruitment, the training experience for a career child psychiatrist may be initiated in any of the three years of general psychiatric residency training, provided that the training is full-time¹, a block of time spent at any one time is not less than six months, and that if a six-month block is chosen it be followed at another time by not less than an eighteen-month block of full-time training in child psychiatry. Two separate twelve-month full-time blocks in child psychiatry may also be chosen. Up to six months' credit for residency training in pediatrics which was at least a year in duration, may count in place of any six-month period of child psychiatry training. In summary, in addition to the categorical, categorical* or flexible first graduate year, a total of four years of training, two years in general psychiatry and two years in child psychiatry, must be taken. (Ordinarily, the exposure to child psychiatry given to most general psychiatry residents as part of their basic psychiatry curriculum will not qualify for this credit.) The entry point of child psychiatry training may be anywhere after the first post-M.D. year.

Each training program accredited for child psychiatry must be an integral part of a general psychiatric residency program accredited for three years of training, or must have a formal educational affiliation with such a program. The written agreement of such affiliation must be signed by the training directors of both programs and a copy of it filed with the Executive Director of the American Board of Psychiatry and Neurology, Inc., and with the program file which will be reviewed by the Residency Review Committee and the Liaison Committee on Graduate Medical Education.

The program in child psychiatry must be under the direction of a qualified child psychiatrist. It is desirable that he or she be Board certified or its equivalent in child psychiatry. Educational quality must have the highest priority in the allotment of the residents' time and energy. The clinical

responsibilities of residents must not infringe unduly on didactic educational activities. The program must exist for the resident and not vice-versa. A formal curriculum must be outlined and available. It must include a program of graduated learning and experience throughout the two years, which is marked by graduated and increasing clinical responsibility for the diagnosis and treatment of children and their families. The training should take place in a child psychiatric facility wherein a spectrum of supervised experience is available with children from infancy through adolescence. The program should provide an understanding of normal behavior as well as the gamut of developmental psychopathology. Biological, socio-cultural, psychodynamic, behavioral, and familial aspects of childhood and its problems must be covered both in the clinical and the didactic experience. Opportunities for the development of both conceptual understanding and clinical skill in therapeutic interventions with children, adolescents, and families, including psychotherapeutic and psychopharmacologic treatment, must be available. An experience devoted to work with out-patients should include a significant amount of work which involves active collaboration with other mental health professionals. Direct experience with psychological measurements is essential. The development of skill in working with severely disturbed children is also an essential part of the training experience and is best achieved in an in-patient or residential program. The caseload for each resident must be small enough to insure the intensive study and understanding of patient management within a controlled milieu. Administrative experience in ward management should be a part of this assignment. In some circumstances, the same experience may be achieved in a day-treatment setting with an intensive milieu program. Work with severely disturbed children should constitute a significant period of time.

Consultation and liaison with pediatric services and community agencies such as well-baby centers, schools, courts, and the social welfare department is a third essential experience. The essential community consultation areas in which the resident should be able to function are: 1) medical, 2) educational, 3) forensic, 4) social. In this connection, the training program must provide a significant number of clinical conferences and didactic seminars not only with child psychiatry faculty members but with other medical specialists and other mental health professionals as well. There should be opportunities for the resident to apply principles he or she has learned in community consultation experience.

Emphasis on developmental considerations is the hallmark of a child psychiatric program. Toward this end, clinical experience with children of all ages and with families from all socio-economic levels is essential. It is recognized that some programs are unable to provide such broad populations themselves but must then do so through affiliation.

Opportunities for teaching with community groups, medical students, and nurses, and opportunities for learning about research should also be available.

The program director is responsible for selecting residents, planning their progress and maintaining records of these evaluations. The program director must devote sufficient time to his program responsibilities so that the program will meet the stated requirements. He or she should provide residents with an understanding of the goals of training and evaluation procedures, as well as the responsibilities of the residents for their own learning and their own clinical work. The program director must also be responsible for the provision of adequate space and equipment for educational activities, e.g. audiovisual equipment, playroom materials and library facilities which contain basic child psychiatric textbooks and journals. Individual office space for each resident with readily available play materials must be available. Special space for physical and neurological examinations, as well as the appropriate medical equipment, must also be readily available in the training facility.

The residency program should provide its residents with instruction about the various cultures existing in the country.

¹As in general psychiatry training, two years of half-time training is equivalent to one year of full-time training.

Neurology/Diagnostic Radiology

Many physicians may not be sufficiently familiar with the attitudes, values and social norms prevalent among the various segments of contemporary American life. Therefore, the curriculum should contain instruction about these issues adequate to enable the resident to render competent care to those patients from various cultural backgrounds for whom the resident has clinical responsibility in the course of residency training.

Finally, it is unlikely that a program can function without a "critical mass" of residents because of the elements of peer teaching and interaction as well as the need for group discussion in seminars and conferences. While it is difficult to identify the optimal "critical mass" for many programs it is clear that a minimum of two residents in each of the two years of training is essential if the program is to maintain full accreditation.

Effective: June, 1979

LCGME: June, 1979

Training Programs in Neurology

The objective of the program is to train physicians skilled in the care of patients with neurological diseases. This training should be based on supervised clinical work with increasing responsibility for out-patients and in-patients. It should include not only the specific diseases of the nervous system of different age groups, but also the neurological complications of medical and surgical conditions.

The minimum period of time provided in a neurology program must be three years. For certification by the American Board of Psychiatry and Neurology, an additional year of training is required. This additional year may be provided as part of a four year program provided within the neurology residency, or obtained outside the neurology residency. Whether within or outside of the neurology program, this year must supply the type of training as specified by the American Board of Psychiatry and Neurology. The Residency Review Committee recommends that this year be completed prior to entering a three year neurology program or that it be the first year of a four year neurology program.

There should be organized instruction in the basic and clinical sciences relating to neurology. This is often best obtained by participating in and performing laboratory procedures and attending instructional exercises in which clinical correlations with laboratory data are emphasized. The resident should be kept informed of major developments in both the basic and clinical sciences relating to neurology, usually best presented by periodic seminars, journal clubs, lectures, didactic courses and attendance at local and national meetings. Qualified residents should be provided with the opportunity for investigative activity. In general, this investigative activity should be directed to problems relating to the normal and abnormal functioning of the nervous system and increasing the trainee's knowledge of neurological disease.

The resident should have instruction and practical experience in a critical, orderly, and detailed patient interview and recording of the clinical history. There must also be instruction and experience in the methods of clinical examination of patients. The trainees should understand the performance and interpretation of various diagnostic procedures such as roentgenological procedures including radioisotopic studies and computerized axial tomography; electroencephalography; electromyography and nerve conduction studies; psychological testing methods; and ophthalmological and otological investigations pertinent to clinical neurology. They should learn to correlate the information derived from these techniques and from other laboratory tests with the clinical histories and with those data from bedside observation in formulating a differential diagnosis and a plan of treatment for patients with disorders of the nervous system. Instruction in neurodiagnostic techniques must be directed toward this goal.

In addition to the supervised experience with in-patients and out-patients on the neurology service, the residents

should participate in consultations and other appropriate liaison operations with the medical, surgical, pediatric and psychiatric services and their subspecialties. The neurological out-patient clinics and consultation services should be supervised by an experienced neurologist and where feasible a close relationship should be maintained with other clinics. There should be an especially close relationship with neurosurgery so that the residents can follow their patients through their neurosurgical operations.

During their training residents should have experience with problems of child neurology, including neurological examinations in newborns and infants. Particular emphasis should be given to the changes in the growth and development of the nervous system of a child. This training is best obtained on a child neurology service under the supervision of a qualified child neurologist.

It is important that the residents have sufficient opportunity to acquaint themselves with the techniques, procedures, and services of physical medicine and rehabilitation. Acquisition of the knowledge of the community resources for patients with neurological diseases is essential for the proper care, rehabilitation, and placement of patients.

The residents in neurology should have organized instruction in the examination of the mental status of patients and should be acquainted with the symptomatology and differential diagnosis of the more frequently encountered psychiatric syndromes, particularly those associated with lesions of the nervous system. The trainees should be made aware of the psychological aspects of the patient-physician relationship and the importance of personal, social, and cultural factors in disease processes and their clinical expression. Knowledge of the use and complications of drugs used in psychiatry is essential. Time spent on a psychiatric in-patient and out-patient service with proper supervision is extremely valuable in acquiring these skills.

Child Neurology: Training leading to special competence in Child Neurology must follow the essentials described above. However, certain additional requirements are necessary.

At last two years of post doctoral pediatric training is required. The program must additionally include three years of training in neurology, one year of which must be in clinical adult neurology and one year of which must be in clinical child neurology.

Effective: Feb. 1978

LCGME: Feb. 1978

21. Special Requirements for Residency Training in Diagnostic Radiology, and Therapeutic Radiology**Training Programs in Diagnostic Radiology**

Objective: Diagnostic radiology encompasses a variety of diagnostic imaging techniques, including all aspects of roentgen diagnosis, nuclear radiology, diagnostic ultrasound, and the use of other forms of radiant energy. The residency program in diagnostic radiology shall offer a quality graduate medical education experience of adequate scope and depth in all of these associated diagnostic disciplines.

Training period: The program shall offer a minimum of 3 years of graduate medical education in diagnostic radiology, of which at least 30 months training must be in the parent program(s).

Direction and supervision: Program director: The program director is responsible for the total training in diagnostic radiology, which includes the instruction and supervision of residents. The director must be a full-time staff member who is a diagnostic radiologist or a radiologist, and must contribute sufficient time to the program to ensure adequate direction. *Staff:* The staff in the program must be qualified in those areas in which they are assigned to instruct and supervise residents, and they must contribute sufficient time to the program and provide adequate instruction and supervision.

Institutional support: Those institutions participating in a program of graduate medical education in diagnostic radiology should provide administrative support of the program.

Facilities: The program must provide adequate space, equipment, and other pertinent facilities to ensure an effective educational experience for residents in diagnostic radiology.

Clinical resources: The program in diagnostic radiology must provide a sufficient volume and variety of patients, including pediatrics, emergency medicine, obstetrics and gynecology, for adequate resident experience in the specialty.

Training content: The clinical training must provide for progressive, supervised, resident responsibility for patient care, and must ensure that the supervised resident performs, personally, those procedures commonly accepted in all aspects of diagnostic radiology. The training, in general, must include progressive study and experience in all diagnostic radiologic subspecialties, as well as diagnostic radiologic physics, radiation biology, radiation protection, and pathology. In view of the importance of an understanding of pathology as a basis for radiologic diagnosis, emphasis should be placed on its study. The radiologic education in different organ systems should provide the opportunity for residents to develop adequate knowledge regarding normal and pathologic physiology, including the biologic and pharmacologic actions of materials administered to patients in diagnostic studies.

Research: The program should encourage residents to participate in research.

Educational environment: The education in diagnostic radiology should occur in an environment which encourages the interchange of knowledge and experience among residents in the program, and with residents in other major clinical specialties located in those institutions participating in the program.

Training complement: The complement of residents in the program should be commensurate with the total capacity of the program to offer an adequate educational experience in diagnostic radiology.

Evaluation: The in-training evaluation of resident performance and progress must be documented frequently through appropriate techniques, including staff appraisal, oral or written tests, or a combination of these.

Teaching file: A teaching file of images referable to all aspects of diagnostic radiology should be available for use by residents. This file should be indexed, coded, and currently maintained.

Conferences: Conferences and teaching rounds must be correlated and provide for progressive resident participation. There should be intradepartmental conferences, as well as conferences with each major clinical department of sufficient frequency, and in which both residents and staff participate on a regular basis.

Literature resources: The program shall provide a sufficient variety of journals, references, and resource materials pertinent to progressive levels of education in diagnostic radiology and associated fields, which are immediately accessible for resident study. In addition, residents should have access to a general medical library.

Effective: Nov. 1977

LCGME: Nov. 1977

Training Programs in Diagnostic Radiology With Special Competence in Nuclear Radiology

This program is designed to offer training in diagnostic radiology and its subspecialties, and also in the diagnostic procedures which comprise nuclear radiology.

Definition: Nuclear radiology is defined as a clinical subspecialty of radiology involving the imaging by external detection of the distribution of radionuclides in the body for diagnosis of disease.

Duration of the Training Period: The training period in diagnostic radiology with special competence in nuclear radiology shall be four years of approved postgraduate training, three years of which must be spent in residency training comprising at least twenty-four months of diagnostic radiology and its subspecialties and twelve months in nuclear radiology. The training shall provide a program of graded study, experience and responsibility in all facets of roentgen diagnosis, medical nuclear and diagnostic radiologic physics, radiobiology, health physics and protection, medical nuclear instrumentation, radiopharmaceutical chemistry and instrumentation, and the clinical applications of nuclear radiology.

Institutional Requirements: The institution offering a residency in diagnostic radiology with special competence in nuclear radiology must also be approved to offer training in diagnostic radiology. It must further provide adequate opportunity for the trainee to participate in and personally perform a broad range of nuclear radiologic procedures. The institution should thus provide no less than 3,000 nuclear imaging procedures per year, including a satisfactory spread of examinations in various systems.

Departmental Requirements: All those requirements which pertain to residencies in diagnostic radiology shall also apply to programs in diagnostic radiology with special competence in nuclear radiology. In addition, the nuclear radiology portion of the program should be under the supervision of a full-time staff member who is recognized as a specialist in nuclear radiology, and there should be available both stationary (camera) and moving (scanner) nuclear imaging systems.

Educational Requirements of the Residency:

- (1) One full-time nuclear radiologist per each two residents in training would seem to provide adequate opportunity for teaching and supervision.
- (2) The residency program should be so planned that residents receive adequate instruction and individual training in all of the diagnostic subspecialties, in nuclear radiology, and in health physics and protection and pathology. Formal instruction in diagnostic radiologic and medical nuclear physics, radiobiology, and radiopharmaceutical chemistry are required.
- (3) It is important that appropriate emphasis be placed on the value of teaching rounds and conferences, which should include at least one weekly conference with each of the major specialties in the institution. In addition, there should be frequent intradepartmental teaching conferences including both diagnostic and nuclear radiologic subjects.
- (4) Research-It is expected that the resident participate in the research opportunities of the department. This is perhaps best accomplished by the assignment of the resident for a specific period to the diagnostic or nuclear radiologic research facilities of the department.
- (5) Library Facilities-A departmental library is essential and must contain a sufficient variety of texts and journals in both the radiologic and nuclear fields to meet the needs of the various levels of resident training. There should also be easy access to a general library. Suitable areas for independent work and study should be available for the use of the residents.
- (6) Teaching-Film Museum-A film museum containing both diagnostic and nuclear radiologic subjects indexed, coded, and currently maintained with continuing follow-up should be available for resident use.

A well-balanced educational program at this level requires a diversity of clinical material, continuous clinical teaching and an active investigative and research effort both in diagnostic and in nuclear fields.

Therapeutic Radiology**Pediatric Radiology**

The residency in pediatric radiology should provide advanced and continuous training in the application of diagnostic radiology to the newborn, infant, and child for the purpose of producing a highly trained clinical specialist. Pediatric radiation therapy is not an essential component. A well-balanced educational program requires a diversity of clinical material, continuous clinical training, and an active investigative and research effort.

Definition: Pediatric radiology is understood to be a segment of diagnostic radiology encompassing the same fundamentals of radiation physics and radiation protection, and the same deductive and inductive reasoning processes, but directed at the special problems of disordered physiology, pathology, and matters of health maintenance as they occur in the growing child.

Duration of Training Period: The minimal training period is three years comprising twenty-four months in diagnostic radiology, and twelve continuous months in pediatric radiology. The training in diagnostic radiology must precede the pediatric experience and include all facets of roentgen diagnosis, the clinical applications of diagnostic nuclear medicine, radiobiology, physics, and protection. It may include up to six months of pediatric radiology.

Institutional Requirements: The institution offering training in pediatric radiology may or may not be the same in which the resident obtains his initial diagnostic radiology training. It may be an entirely separate institution. In any case, the clinical material in pediatrics must be of such volume and composition as to provide ample clinical experience with the broad diversity of pediatrics. To qualify, the institution should have a full-time staff in general pediatrics, pediatric surgery, pediatric cardiology and pathology as a minimum. There should also be an AMA approved residency training program in pediatrics.

Departmental Requirements: Staff: The attending staff should comprise at least two full-time radiologists devoting themselves to pediatric radiology. The staff shall have control of adequate technical facilities devoted primarily to children's radiology. One radiologist should be designated as director of the training program in pediatric radiology. Whenever possible, more than one resident should be in training in addition to other residents who may rotate through the department for shorter time periods.

Educational Requirements for the Residency:

(1) The same basic instruction is required in pediatric radiology as in diagnostic radiology. The only difference is that the program allows concentration on pediatric rather than adult medical problems. If the program integrates experience at two separate institutions, careful planning so as to include formal instruction in radiation physics, protection, radiobiology and experience in diagnostic nuclear medicine must be assured.

(2) Increasing resident responsibility in respect to patient care should be an important feature of the training period in pediatric as well as diagnostic radiology.

(3) It is important that appropriate emphasis be placed on the value of teaching rounds and conferences, which should include at least one weekly conference with each of the major pediatric specialties in the institution. In addition, there should be frequent intra-departmental teaching conferences.

(4) A departmental library is essential and must contain sufficient variety of texts and journals to cover both general pediatrics and pediatric radiology.

(5) A film museum indexed, coded, and currently maintained should be available for resident use.

(6) Suitable areas for independent work and study should be available for the use of the residents.

**Training Programs
in Therapeutic Radiology**

Objective: Therapeutic radiology is that branch of clinical medicine which is related to the diagnosis and treatment of patients with cancer with special emphasis in the identification of the role of radiation therapy in the care of patients, in the administration of radiation therapy in an optimum manner, and in the participation in such aspects of medical practice as may lead to improved care of the cancer patient.

Training Period: The program shall offer at least three years of graduate medical education in therapeutic radiology. No more than six months may occur in rotations to affiliated institutions outside of the single institution in which the program resides, or outside of those participating institutions united to form an integrated program.

Direction of Supervision: Program Director: The program director is responsible for the total training in therapeutic radiology, which includes the instruction and supervision of residents. The director must be a full-time staff member qualified in and practicing therapeutic radiology, and must contribute sufficient time to the program to ensure adequate direction. All radiation therapy equipment and materials, and their clinical use, shall be under the supervision and responsibility of the chief of the therapeutic radiology service.

Staff: The staff in the program must be qualified in those areas in which they are assigned to instruct and supervise residents, and they must contribute sufficient time to the program and provide adequate instruction and supervision.

Institutional Support: Those institutions participating in a program of graduate medical education in therapeutic radiology should provide administrative support of the program.

Facilities: A training program in therapeutic radiology must have adequate space, equipment and other pertinent facilities to ensure an effective educational experience for residents in therapeutic radiology.

Clinical Resources: A training program in therapeutic radiology must have a sufficient volume and variety of cancer patients, including pediatric and gynecologic patients for adequate resident experience in the specialty. There must be adequate programs in cancer surgery, cancer chemotherapy, and hematology. The therapeutic radiologist should be in control of those inpatients and outpatients assigned to therapeutic radiology and must maintain an adequate follow-up clinic of patients treated by radiation therapy.

Training Content: The clinical training staff must provide for progressive, supervised resident responsibility for patient care, and must ensure that the supervised resident personally performs those procedures commonly accepted in all aspects of therapeutic radiology.

Training should include basic sciences essential to training in radiation oncology, radiation physics, radiation biology, pathology with emphasis on neoplasia, radiation effects, and medical statistics. The training curriculum will identify the manner in which these basic sciences will be taught.

Also included are the allied clinical disciplines, cancer surgery and cancer chemotherapy, which play a major role in the management of the cancer patient. The training program must be designed to assure that the resident acquires a knowledge of the potential value, and the limitations of these other clinical disciplines. This may be accomplished through the attendance of various multidiscipline conferences, departmental conferences, or by actual rotations to those services.

Conferences: Conferences and teaching rounds must be correlated and provide for progressive resident participation. There should be intradepartmental oncology conferences, as well as conferences with each major clinical department of sufficient frequency, in which both resident and staff participate on a regular basis.

Literature Resources: A sufficient variety of journals, references, and resource materials pertinent to progressive levels of education in radiology and associated fields in oncology and basic sciences shall be provided and must be immediately accessible for resident study. In addition, residents should have access to a general medical library.

Research: Residents should be encouraged to participate in research.

Educational Environment: The education in therapeutic radiology should occur in an environment which encourages the interchange of knowledge and experience among residents in the program, and with residents in other major oncology specialties located in those institutions participating in the program.

Training Complement: The complement of residents in the program should be commensurate with the total capacity of the program to offer an adequate educational experience in therapeutic radiology.

Evaluation: The in-training evaluation of resident performance and progress must be documented frequently through appropriate techniques, including staff appraisal, oral or written tests, or a combination of these.

Effective: Sept. 1978

LCGME: Sept. 1978

22. Special Requirements for Residency Training in Thoracic Surgery

A thoracic surgical residency is a graduate education program designed to give the resident a broad clinical experience in pulmonary, esophageal, mediastinal, chest wall, diaphragmatic and cardiovascular disorders. Although operative experience constitutes the important aspect of the program, the experience should include the correlation of the pathologic, physiologic and diagnostic aspects of disorders encountered in this specialty.

The program must be of two or more years' duration. The resident must assume 12 months of senior responsibility for both the pre-operative evaluation and the operative and post-operative care of patients with thoracic and cardiovascular disease. The Program Director must provide adequate independent operating and clinical experience for the residents.

It is desirable that the resident complete the requirements for the American Board of Surgery before the two years of training in thoracic surgery. Rotations constituting the first year of thoracic training must be on a clearly defined thoracic surgical service for periods not shorter than 3 months, and at an advanced level of general surgical training. The last 12 months must be served consecutively on the cardiothoracic surgery service.

The scope of thoracic surgery is so broad that two years is a minimal period needed for training a thoracic surgeon. The encroachment on this time by laboratory investigation is no longer permitted. Training in non-surgical areas such as cardiac catheterization or pulmonary function cannot exceed 3 months of the two-year program and is likely to be an acceptable substitute for surgical experience only when the remainder of the program provides abundant surgical experience.

Affiliations with other institutions may sometimes be desirable in order to give the resident a well-rounded experience. In case this is done, it is the responsibility of the Program Director to see that the educational environment, the clinical material and the concept of progressive surgical responsibility is scrupulously followed by the affiliated institution. Segments of the training program in affiliated institutions which are to be considered as part of the 24-month requirement must be approved by the Residency Review Committee.

Programs or parts of programs which give the resident simultaneous responsibility for thoracic and general surgical patients are not acceptable.

The residents, on completion of the program, are expected to be clinically proficient and surgically adept in the care of

patients with pulmonary, esophageal, chest wall, diaphragmatic and cardiovascular disorders as well as cardiac and respiratory support systems. This must include related diagnostic procedures such as bronchoscopy, esophagoscopy, and roentgen ray interpretation. The Program Director is responsible for certifying to the American Board of Thoracic Surgery that the resident, after his training, has had a broad surgical experience in all aspects of the specialty, and that the resident is a skilled clinical and technical thoracic and cardiovascular surgeon. Since the endorsement by the Program Director carries as much weight in the certifying process as the examination given by the American Board of Thoracic Surgery, it is imperative that the Program Director carefully select applicants for his program, that he monitor their progress, and that he eliminate those residents from the program who do not measure up to the high standards of performance expected of a surgeon eligible for the examination by the American Board of Thoracic Surgery.

It is the responsibility of the Program Director to see that the resident keeps accurate records of his operative experience, and that these be recorded on the appropriate forms sent to him by the Residency Review Committee.

The accuracy and completeness of the program application forms required by the Residency Review Committee are the responsibility of the Program Director. A comprehensive evaluation of a program cannot be completed without detailed information as requested by the Residency Review Committee. In the case of a new program, action by the Residency Review Committee will be deferred until the required information is furnished. In other applications the failure to furnish the required information and to complete the application form will be considered in the overall evaluation of the program.

One measure of the quality of a program may be the performance of its graduates on the examinations of the American Board of Thoracic Surgery.

The provisions of the General Requirements must also be met for approval.

Residents who plan to seek certification by an American Board should communicate with the secretary of the appropriate board, as listed in Section IV, to be certain regarding the full requirements for certification.

23. Special Requirements for Residency Training in Urology

Definition: Urology is that branch of Medicine and Surgery concerned with the study, diagnosis and treatment of abnormalities and diseases of the urogenital tract of the male and the urinary tract of the female. The practice of Urology involves, in addition to the usual diagnostic and surgical work, special knowledge and skills in the treatment of pediatric urologic problems, congenital abnormalities, infection of the urinary tract, infertility and sterility, male sexual problems, renal dialysis and renal transplantation, renal hypertension, medical and surgical problems relating to the adrenal, testis and prostate, and cancer immunology and therapy. Because of shared responsibility in patient care with pediatricians, internists, nephrologists, endocrinologists, surgeons and chemotherapists, close association with specialists in these disciplines is essential.

General Characteristics of Approved Programs: Residency training in Urology must be so planned and organized that all trainees acquire the knowledge basic to the study of urologic disease by direct and responsible patient management experience so that they may attain detailed knowledge of anatomy, embryology, physiology, pathological tracts, infections of the urinary tract, infertility and sterility, male sexual problems, renal dialysis and renal transplantation, renal hypertension and cancer immunology and therapy. The programs are expected to provide experience with pediatric problems and wide range of trauma conditions. Since Urology is largely a surgical specialty, skill in diagnostic and surgical

Urology

techniques must be developed in a progressive manner under proper guidance.

Clinical and laboratory investigation should be encouraged and those trainees who demonstrate ability in this area should be supported.

The goal of residency training is to develop physicians who are well informed and skilled in all aspects of urology, able to render quality care and to be admitted to the American Board of Urology examination. Therefore, programs must be so organized that there is a clear demonstration by the trainee of competence in basic urological knowledge prior to progression to the level of supervised, semi-independent patient management and operative experience. A further demonstration of competence in clinical urologic surgery prior to completion of the program is required. Every program must establish a system of trainee evaluation which clearly demonstrates that each trainee has successfully passed each of the milestones mentioned above.

It is necessary that the performance of each house officer be reviewed by the teaching staff at least twice a year and that a documented record of performance be prepared and retained for review by appropriate accrediting bodies. In addition, an in-training examination may be utilized for this purpose. It is suggested that comments be included from other departments or services involved in training.

Duration and Scope of Training: The minimum time involved in residency training, as outlined by the American Board of Urology, is five (5) years. The Program Director with the approval of the Residency Review Committee for Urology shall establish his requirements for the first two years of training after medical school: they may be spent in surgery or fields related to Urology (such as pediatrics, medicine, nephrology, pathology, or research, etc.) with the understanding that basic surgical skills pertinent to Urology will be acquired during these years. Although three (3) years in clinical Urology usually follow, any fully integrated service may permit variation in the five (5) year program. In all cases, however, the individual must spend a minimum of 36 months in Urology, the last 12 months of which must be as a senior resident with full clinical responsibility under guidance.

It is desirable that the parent institution provide approved training programs in internal medicine, surgery, pediatrics, pathology and radiology because of the need for shared experience in patient care.

The institution sponsoring a training program in Urology must provide the following facilities: (1) adequate male, female and pediatric beds under urological control; (2) adequate outpatient facilities; (3) adequate space and equipment for endoscopic examination and treatment; (4) adequate facilities and equipment for all uroradiological diagnostic procedures; (5) adequate radiotherapy of tumors; (6) modern operating room facilities for the performance of all urological surgery; (7) laboratory facilities for routine and special tests; (8) adequate library facilities.

Staff: The staff responsible for the direction and execution of the program must be well qualified and diversified so as to represent the many facets of urology. Program Directors must be carefully chosen on the basis of demonstrated ability in clinical urology and teaching. They should preferably have

training in urologic investigation and be able to initiate and develop a significant program of investigation in which residents may participate. They should also have demonstrated ability in dealing with administrative problems. Such individuals must have sufficient status within their institution to deal on an equal level with colleagues, directors of other programs and administration.

The academic and attending staff should be composed of an adequate number of urologists who are highly qualified in clinical urology, who are competent teachers and willing to give the necessary time and effort to the educational program. They should be engaged in scholarly activities such as (1) participation in regional or national scientific societies; (2) participation in their own continuing urological education; (3) scientific publication and presentations; and (4) show active interest in research as it pertains to their specialty. Evidence of teaching ability and performance will be maintained for each faculty member and must be available for review. A staff which does not exhibit such characteristics will be cause for grave concern as to its adequacy and suitability for conducting a program of graduate surgical education.

Teaching rounds and departmental conferences must be co-ordinated in a comprehensive manner. Collateral knowledge should be supplied by interdepartmental conferences in surgery, medicine, radiology, pathology, and by encouraging consultations. All pathological material must be available for study and regular pathological conferences should be conducted by a qualified pathologist. Special attention must be given to uro-radiological diagnostic techniques and their interpretation.

Clinical Material: An institution to be approved to conduct graduate education in Urology must be able to provide adequate number and variety of urology patients for which the resident has appropriate responsibility. This must include sufficient volume of diagnostic and operative material in pediatric urology.

Logs of diagnostic and operative procedures must be kept by each resident on forms supplied by the Residency Review Committee for Urology.

It is not sufficient that the house staff be involved only with those patients in hospital. An adequate outpatient clinic, properly supervised, is considered necessary.

Institutions which cannot provide adequate clinical experience within their walls must seek affiliation with other hospitals. Such affiliations must be approved by the Residency Review Committee for Urology.

As stated in the General Requirements for Residencies, it is not essential or even desirable that all institutions adopt exactly the same program content and structure, but it is essential that all institutions participating in graduate education be able to meet the requirements for approval and, either alone or in collaboration with other institutions, attain comparable results in the quality of education and experience obtained.

One significant measurement of quality of a program is the performance of its graduates on the examination of the American Board of Urology.

All the provisions of the General Requirements must be met for approval.

Section III

SUMMARY STATISTICS ON GRADUATE MEDICAL EDUCATION IN THE UNITED STATES

INTRODUCTION

This section of the DIRECTORY OF RESIDENCY TRAINING PROGRAMS is the annual report on graduate medical education in the United States. As a result of a completely new data processing system this edition contains data not previously available: for example, post-graduate year one positions offered; the number of foreign medical graduates who are U.S. citizens; and information on the ethnic background of residents. This edition also contains some trend information. The 1977 statistics, not previously published, are reported here with comparable 1978 and 1979 data. Because the 1977 statistics were hand-counted the information is limited to number of accredited programs, number of residents on duty by specialty, number of foreign medical graduates on duty by specialty, and number of positions offered for a future year. (Information on women residents on duty September 1, 1977 was published in the JAMA Education Issue, December 1978 and is included in this edition of the DIRECTORY.)

METHODOLOGY

Information on graduate medical education in the United States is collected annually by means of two surveys, one of program directors, and one of institutions and agencies which participate to a significant extent in graduate medical education. The accreditation actions of the Liaison Committee on Graduate Medical Education (LCGME) are received quarterly. In March 1980 every director of a residency training program accredited by the LCGME was sent a computer printout of the listing of the program as it will appear in the DIRECTORY, with instructions to make corrections and return to this office. Enclosed with the printout was a six page survey form requesting statistics on the number of residents on duty, by year of training, type of medical school, sex, race, and citizenship. The form also requested information about the availability of shared-schedule positions in this program, the numbers of candidates accepted for July 1, 1980, of positions to be offered in the program for 1981-1982, and of Fifth Pathway graduates in the program.

The chief executive officer of each institution participating in graduate medical education was sent a computer printout of the listing of the institution for the DIRECTORY, with directions to update it. Enclosed with the printout was a one page form requesting information on the size of the medical staff involved in teaching graduate trainees, and the appointment of osteopathic physicians to the medical staff.

All flexible program directors were sent a computer printout of their program listing with instructions to update it. Attached to the printout was a one page form requesting information on the number of trainees in the program 1979-1980, the numbers of positions to be offered in 1980-1981, and in 1981-1982.

The accuracy of the data reported here is to some extent dependent upon the accuracy and cooperation of the respondents, i.e., program directors and/or the staff of the medical education office.

Every effort has been made to assure the accuracy of the statistics reported here. All data were checked for consistency before entry to the data bases. When an answer to one section was found to be inconsistent with the information in another section, the respondent was contacted by telephone for clarification. The statistics produced by electronic data processing of the data bases were checked for internal consistency.

Response Rate

By June 1, 1980 over 90 percent of the residency and flexible programs had responded to the survey conducted in Spring 1980. However, the response rate varied with specialty. All of the programs in aerospace medicine and 95 percent of dermatology programs returned completed forms. A high response (better than 91 percent) was received from programs in obstetrics/gynecology, orthopedic surgery, physical medicine and rehabilitation, plastic surgery, and general surgery. On the other hand, a smaller response (70 percent or less) came from programs in blood banking, neuropathology, and public health. (The lowest response rate was 67 percent.) Eighty-six percent of all programs provided a count of residents on duty by year of training, school of medical education, sex, race, and citizenship. For those programs which did not respond to the Spring 1980 survey, the count of residents on duty July 1979 (provided in the Fall 1979 survey) was used. Thus the count of residents "on duty September 1, 1979," reported in Tables 1, 2, and 5 represents 98 percent of the accredited programs. The count of residents on duty September 1, 1977 is from 86 percent of the programs. Any comparison of annual totals (as in Table 5) should take into account the difference in response rates.

DISTRIBUTION OF ACCREDITED PROGRAMS BY SPECIALTY AND GEOGRAPHIC REGION

Following the May 1980 meeting of the LCGME there were 4,673 accredited residency training programs in the United States. This number includes those programs for which accreditation was to be terminated June 30, 1980. (Statistics from such programs are included here, however, these programs are not listed in Section IV.)

Internal medicine had the largest number of accredited programs, followed by family practice, pathology, general surgery, obstetrics/gynecology, pediatrics, and psychiatry. In the 1979-1980 academic year over two-fifths (44.2 percent) of all residents were in training programs in internal medicine, family practice, or pediatrics. If obstetrics/gynecology is included, over 51 percent of 1979-1980 residents were being trained in primary care. For the percent of programs and trainees in each specialty, see Table 1.

Residency programs tend to be located in the more highly populated regions of the country. Nearly one-fourth of accredited residency programs were located in the Middle Atlantic region. These programs were training more than 23 percent of residents. The state of New York had the largest percentage (14 percent) of programs and trained the largest number of residents; California ranked second both in number of programs and number of residents in training.

Positions Available

Table 3 shows the number of positions available to trainees for 1979 and for 1980. The table shows an increase of approximately 1,600 positions for 1980-1981. Records from 1976 thru 1979 indicate that approximately 6.5 to 7.0 percent of positions offered are not filled. Program directors reported in April 1980 (shortly after the NRMP match) that 13.2 percent of positions were unfilled. It is very likely that more positions were filled by July 1980.

The "first year positions" column of Table 3 gives the number of positions for the first year of training in the particular specialty. Several specialties have a prerequisite for entry

SUMMARY STATISTICS

to training. For example, all first year positions in allergy and immunology are open only to trainees with at least three years of internal medicine or pediatrics.

Program directors were asked to report the number of positions open to trainees seeking a first post-graduate year (PGY-1 positions). Table 4 shows 18,013 PGY-1 positions available for 1980-1981, and 17,287 such positions for 1981-1982. Specialties which do not offer PGY-1 positions were not included in the list. Not all programs were able to project the number of positions to be offered for 1981-1982 because of the uncertainty of funding.

Approximately 14 percent of programs (674) reported the availability of shared-schedule positions. Of this number, over 60 percent were programs in internal medicine, pediatrics, psychiatry, child psychiatry, or neurology. Another three percent were flexible programs. The largest numbers of programs offering shared-schedule positions were found in New York (65 programs), California (50 programs), Illinois and Massachusetts (46 programs each), Pennsylvania (45 programs), and Michigan (41 programs).

RESIDENTS IN TRAINING

The number of trainees has increased steadily over the past several years. Table 5 shows the number of residents on duty September 1 for three consecutive years. The counts for 1978 and 1979, representing over 97 percent of the programs, show a significant increase in number of residents in internal medicine, family practice, and pediatrics programs. Smaller increases are evident in anesthesiology, orthopedic surgery, otolaryngology, and diagnostic radiology. The numbers of trainees in psychiatry and surgery have decreased in the past year.

Women Residents

The number and percent of women in residency programs has been increasing steadily. In the 1977-1978 training year, 15 percent of residents were women; by 1979-1980, women comprised more than 19 percent of all trainees. In 1977, over one-third of specialties had no women among the residents. In 1980 women were found training in all specialties with accredited programs.

Table 5.—Number of Residents on Duty September 1, 1977, 1978, and 1979

*Programs in Pediatric Allergy will not be accredited after July 1, 1981. Many of these programs have been reaccredited as Allergy and Immunology. Accreditation of General Practice programs expired July 1, 1978.

The most striking change in the choice of specialty by women is the decrease in percentage of women residents in psychiatry. In 1977, over 14 percent chose psychiatry; less than ten percent did so in 1979. The percentages of women residents in pathology, pediatrics, and diagnostic radiology also decreased slightly. Family practice, obstetrics-gynecology, and, to a lesser extent, general surgery showed an increased percentage of women residents (see Table 6).

Slightly more than 25 percent (3,227) of women were foreign medical graduates, one in four of whom was a U.S. citizen.

Foreign Medical Graduates

The number of foreign medical graduates in residency training in the United States has been decreasing over the past several years. The statistics for 1979 reveal 18.7 percent of residents were foreign medical graduates, somewhat lower than the 24.5 percent of residents on duty in 1977. Information on medical school of graduation was provided for 92 percent of residents.

The percentage of foreign medical graduates in specialty programs ranges from 4.3 percent in public health and 4.9 percent in dermatology, to 56.1 percent in physical medicine and rehabilitation.

*Less than 1/100th percent.

†See Psychiatry.

Information on Fifth Pathway graduates was not available by specialty for 1977. In 1978 slightly more than 10 percent of foreign medical graduates had been through a Fifth Pathway program. In 1979 the percentage of foreign medical graduates who were Fifth Pathway graduates had increased to over 12 percent. Table 7 provides a comparison by specialty of data on foreign medical graduates for the years 1977, 1978, and 1979. The geographic distribution of foreign medical graduates in residency programs is shown in Table 8.

Thirty-five percent of foreign medical graduates were U.S. citizens. Family Practice programs had the highest percentage (63.9 percent) of foreign medical graduates who were U.S.

citizens. Over 56 percent of foreign medical graduates in obstetrics/gynecology programs were identified as U.S. citizens. In contrast, less than 20 percent of the foreign medical graduates in anesthesiology programs were U.S. citizens.

Race and Citizenship of Residents

Information on ethnic background was provided for 91 percent of residents on duty. Approximately five percent of residents are Black non-hispanic. Of these 89.5 percent were graduates of U.S. medical schools. Among foreign medical graduates nearly half (49.4 percent) were Asian or Pacific

Islanders. Table 9 reports the number of residents by ethnic background.

The number of Black non-hispanic residents has been increasing over the past several years. In 1977, three percent of residents were Black; in 1979, Blacks comprised five percent of residents on duty. For the distribution of Black residents by specialty, for the past three years see Table 10.

Information on citizenship was provided for 91 percent of residents. Of those residents for whom citizenship was indicated, 85.7 percent were listed as U.S. citizens. Of foreign medical graduates for whom citizenship was reported, 35.2 percent were listed as U.S. citizens. It should be noted that some foreign medical graduates who began the residency program as non-citizens may have recently obtained U.S. citizenship. There was some indication from survey respondents to this effect. Over 99 percent of U.S. graduates were U.S. citizens.

FLEXIBLE PROGRAMS

By definition, a flexible first year program is one sponsored by at least two accredited residency programs. In some cases appointment to flexible positions is controlled by the directors of the sponsoring residency programs. In other institutions appointment to flexible positions is made by a committee of program directors.

The survey of flexible programs (to which 88 percent responded) revealed 1,329 trainees in 159 programs. Of this number, 16.5 percent (or 219) were graduates of foreign medical schools. The geographic distribution of flexible programs is shown in Table 11.

OSTEOPATHIC PHYSICIANS IN LCGME ACCREDITED PROGRAMS

The number of osteopathic residents in LCGME accredited programs increased from 386 (in 1977) to 642 (in 1979). (Some of these osteopathic residents were in federal programs which are also accredited by the American Osteopathic Association.) Osteopathic residents were most frequently found in internal medicine, family practice, obstetrics/gynecology, pediatrics, psychiatry, and radiology (see Table 12).

*Federal programs are accredited by the American Osteopathic Association, as well as by the LCGME.

†See Psychiatry.

Of the hospitals involved in graduate medical education, 991 reported that osteopathic physicians are eligible for appointment to the medical staff. Nearly half of these hospitals (463) have appointed 1,914 osteopathic physicians in several specialties, with the largest number having appointments in family practice. The number of osteopathic physicians on staff in teaching hospitals for the past three years is shown in Table 13.

INSTITUTIONS AND AGENCIES PARTICIPATING IN GRADUATE MEDICAL EDUCATION

Hospitals are not the only institutions involved in graduate medical education. In addition, state medical examiners' offices, blood banks, ambulatory clinics, and mental health agencies also regularly provide residency training. The number of institutions and agencies identified as offering a significant portion of training in graduate medical education programs was 1,588. Eleven percent of these institutions were under the control of local governments or hospital district authorities; 12 percent were state controlled; 11 percent were federal institutions; 15 percent were church related institutions; and 43 percent were other non-profit corporations or agencies. The majority of graduate medical education institutions (1,372) were hospitals. The median size of such hospitals was 377 beds. Table 14 shows the size and type of control of graduate medical education institutions listed in Section V of this DIRECTORY.

The 1980 survey brought a response from 69 percent of the institutions and agencies in graduate medical education. These 1,095 institutions reported a full-time medical staff of 327,993 physicians, of whom 5.5 percent were women. Of the physicians on full-time medical staff, 60,419, were involved in the training of residents; of this number, 9.2 percent were women. An additional part-time medical staff of 64,800 physicians also participated in residency training. Of this number 5.7 percent were women. Table 15 shows the geographic distribution of teaching staff in graduate medical education programs.

PROGRAMS AFFILIATED WITH MEDICAL SCHOOLS

It is not a requirement that a residency program have medical school affiliation in order to receive accreditation by the Liaison Committee on Graduate Medical Education. The term "affiliation" has been used by medical educators to refer to a variety of relationships: a) an agreement between two hospitals; b) a quasi combination of two residency programs; c) a contract between a hospital and a medical school; d) a relationship between a residency training program and a medical school.

In conjunction with the annual survey of residency programs, a preliminary investigation was conducted to determine the extent of affiliation between *residency training programs* and medical schools. Affiliation of a hospital with a medical school does not mean that all of the residency programs in the hospital (or indeed, any) have an affiliation with the medical school. As a first step in determining the extent of medical school involvement in residency training programs in the United States, program directors were asked the following series of questions:

Is this program affiliated with a medical school? Yes or No. If yes, name the medical school.

If yes, check one or more of the following:

1. Is the program *entirely* financed by the medical school?
2. Is the program *partially* financed by the medical school?
3. Is the program *entirely* financed by a hospital owned by the medical school?
4. Is the program *partially* financed by a hospital owned by the medical school?
5. Is the program *not* financed by the medical school or by a hospital owned by the medical school?

Those programs which responded by checking number five above were asked to provide at least a one paragraph description of the affiliation. These descriptions revealed substantial differences in the nature of the affiliation between residency programs and medical schools.

*House Staff are excluded.

All of the descriptive statements were read and coded by one person; then they were divided into three categories:

1. Statements which described an affiliation in which the medical school contributed substantial academic support to the residency program. Such statements gave descriptions such as the following: a) the medical school faculty were a regular part of the residency faculty; b) the medical school clinical department chairman was the director of the residency program; c) the residents in the program were enrolled as graduate students at the parent university of the medical school; d) the residents spent a required part of their rotation at the medical school; e) most or all of the resident's training took place in the medical school hospital; f) there was an even exchange of residents between the residency and the medical school program; or g) the medical school provided regular conferences and/or grand rounds for the residents. Any combination of the above descriptions was coded as "substantial academic support."

2. The second group of statements were those which described an affiliation which was exclusively for the purpose of supporting the clinical teaching program of the medical school. Such statements indicated that the medical students rotated through the department of the residency program. The residents might be involved in teaching medical students.

3. A third class of statements described partial or informal affiliations that involved limited consultation from the medical school faculty, *elective* rotations of the residents to the medical school hospital, or courtesy appointment of staff of the residency program to the medical school faculty. A few respondents stated that the program was completely autonomous, even though the hospital had a formal affiliation with the school.

The results of this preliminary survey are reported here in summary form. A more extensive investigation of this question will be conducted next Spring.

Of all the accredited residency programs, 36.2 percent are financed at least partially by the medical school, or by the hospital owned by the medical school or its parent university.

An additional 4.3 percent of the programs, though not financed by the medical school or its hospital, described an affiliation which indicated "substantial academic support" of the residency program by the medical school.

The number of programs affiliated for the purpose of supporting the teaching program of the medical school equaled three percent of all accredited programs. Another 5.4 percent of programs described a loose or informal affiliation with little or no involvement of trainees with the medical school. Another 20.9 percent of programs indicated that they were not financed by the medical school nor its hospital, but gave no description of the affiliation; 20 percent of the programs reported that they were not affiliated with a medical school; 10.3 percent of programs either did not respond to this question or did not return the survey form.

By means of the new data processing system, it was possible to count the number of residents in each category of program affiliation with a medical school. Programs which were financed partially or entirely by the medical school or its hospital trained 42 percent of all residents on duty September 1, 1979. Those programs not financed by, but "academically supported" by a medical school, trained an additional six percent of residents. Programs which were affiliated for the purpose of supporting the medical school teaching program account for the training of 2.9 percent of residents. Programs which described a partial or informal affiliation accounted for the training of 5.5 percent of residents. Those programs not financed by the medical school and which did not provide a description of the affiliation, accounted for the training of 22.9 percent of residents. The programs that answered "no medical school affiliation" were responsible for the training of 11.4 percent of residents. Programs which did not respond to the question accounted for the training of 9.3 percent of residents.

In summary, 40.5 percent of accredited residency programs were financed by, or "academically supported" by, a medical school and were responsible for the training of 48 percent of residents in the United States.

Section IV

DIRECTORY OF ACCREDITED RESIDENCY PROGRAMS

This Section of the Directory contains the list of accredited residency programs, by specialty or subspecialty; and a list of Flexible Programs which have been identified by residency program directors. The list of accredited training programs includes all residency programs accredited as of July 1, 1980 by the Liaison Committee on Graduate Medical Education (LCGME).

The information contained in this list is substantially the same as in previous years, however, the format of the information is new. The programs are listed under the state and city of the parent institution. Indented under the title of the program are the participating institutions at which the resident receives a significant portion of this training. The name and address of the program director follows. Other information on each program includes the length (number of years of training accredited by the LCGME), the average daily census, annual admissions, or other appropriate data to indicate the volume of clinical experience available to the trainee. (A key to the abbreviations may be found at the bottom of each page.)

The total positions, as reported by the program director, indicates the size of the program for 1981-1982. The number of first-year positions, in parenthesis, are identified as C/C* and are included in the total. (Flexible positions are not included in the total.)

For example: (6C/2C*) means the program has six categorical and two categorical* positions; (7C/0C*) means the program has seven categorical and zero categorical* positions. Both categorical and categorical* programs are first-year programs sponsored, planned, and conducted by one accredited residency program as a part of that program. A *categorical dif-*

fers from a categorical program in content.*

Categorical program is limited to training in the specialty field of the sponsoring residency program.

*Categorical** program is *not limited* to a single specialty but may include experience in other specialty fields as determined by the sponsoring program.

Flexible program is a diversified first year sponsored by two or more accredited residencies, and is jointly planned and supervised by the residencies. For a list of such programs, see page 317 and following. Flexible programs are designed to give a broad clinical experience for: (1) students who feel the need for this type of first year; (2) students who feel that such experience will best serve the purpose of subsequent graduate education in their fields; and (3) students who have not yet decided on their specialty but may wish to choose among several fields during their graduate year. The content of the flexible first year must include four months of internal medicine, but the remainder of the year may be designed in accordance with the purposes of the two or more sponsoring residency programs, with due regard to the interests and needs of the students.

Every effort has been made to assure an accurate and current listing of programs. However, because there is a time lag involved in publication, it is important that candidates interested in a particular program obtain the most current information about the program by writing to the director. Programs which did not respond to the survey and new programs approved a few weeks before press deadline are identified in the list by the symbol ►. Such programs show zero positions.

Section V

DIRECTORY OF INSTITUTIONS AND AGENCIES PARTICIPATING IN RESIDENCY TRAINING

This Section contains a list of hospitals and other health care institutions and agencies which participate to a significant extent in graduate medical education. Only those institutions listed as a part of a residency program in Section IV are included in this list. The name of the institution is listed under the state and city of its geographic location. The name and address of the Director of Medical Education (DME) is given for each institution reporting such information. The abbreviation on the line following DME specifies the type of control. Other information reported by the institutions includes number of staff positions, number of beds, average daily census (ADC), and percent of necropsies (NECR). Also included under each institution is a list of the specialties for which this institution provided graduate training. For a key to the abbreviations see Appendix B.

Affiliation Between Hospitals and Medical Schools

The medical school affiliation of the institution is listed as an item of information. It is *not* a requirement that hospitals have an affiliation with a medical school to obtain approval of a residency program. The type of medical school affiliation is indicated as G (*Graduate Only*), M (*Major*), or L (*Limited*). The number code following identifies the medical school. (See Appendix A for a list of schools.)

Graduate affiliation with a medical school indicates that the hospital is used by the school for graduate training programs *only*. Thus the *Graduate* designation is used only for hospitals not designated as *Major* or *Limited* and *only* in cases in which one or more of

the following arrangements is in effect:

- a) The house staff are selected by officials of a medical school department or by a joint committee of the hospital teaching staff and medical school faculty.
- b) There is some degree of exchange of residents between this hospital and the principal teaching hospital of the medical school.
- c) The medical school faculty (other than the hospital's attending staff) are regularly scheduled to participate in the teaching programs of the hospital.
- d) A contractual arrangement (with or without financial commitment) specifies the medical school participation in the organization and supervision of the graduate training program in the hospital.

If the medical school faculty participation in the hospital is limited to an occasional lecture or consultation visit, or if the hospital's residents attend medical school teaching conferences only as visitors, the hospital is not designated as having a graduate affiliation. If the hospital is used for undergraduate clerkship teaching, the medical school affiliation should be designated as either *Major* or *Limited*, but not *Graduate*.

Major affiliation signifies that the hospital is an important part of the teaching program of the medical school and is a major unit in the clinical clerkship program and will participate in any graduate medical education programs of the medical school.

Limited affiliation with a medical school indicates that the hospital is used in the school's teaching program only to a limited extent.

APPENDIX C
CERTIFICATION REQUIREMENTS

REQUIREMENTS FOR CERTIFICATION

American Specialty Boards

The Council on Medical Education of the American Medical Association and the American Board of Medical Specialties (formerly the Advisory Board for Medical Specialties) have now approved 20 primary and 3 conjoint examining and certifying boards on the basis of minimal standards listed in the "Essentials for Approval of Examining Boards in Medical Specialties."

The primary purposes of the boards are (1) to conduct investigations and examinations to determine the competence of voluntary candidates, (2) to grant and issue certificates of qualification to candidates successful in demonstrating their proficiency, (3) to stimulate the development of adequate training facilities, (4) to cooperate with the Liaison Committee on Graduate Medical Education in evaluating residency training programs, and (5) to advise physicians desiring certification as to the course of study and training to be pursued.

The boards are in no sense educational institutions, and the certificate of a board is not to be considered a degree. It does not confer on any person legal qualifications, privileges, nor a license to practice medicine or a specialty. The boards do not in any way interfere with or limit the professional activities of a licensed physician, nor do they desire to interfere in the regular or legitimate duties of any practitioners of medicine.

Table 1 is intended to be an aid primarily to graduates of foreign medical schools. The details of requirements for certification will be found on the following pages. Each board has provided the information which is published here for the convenience of physicians interested in certification. **Specific inquiries concerning certification by a specialty board should be addressed to the appropriate official whose name and address is listed in Table 2.**

Most of the American specialty boards publish booklets containing statements on the requirements for certification. This information is also included for each board in the *Directory of Medical Specialists*. The *Directory of Medical Specialists*, published for the American Board of Medical Specialties by Marquis—Who's Who, Chicago, contains biographical and educational information on each living specialist (including those retired from practice) who had been certified by an examining board approved by the American Medical Association. Executive Director of the American Board of Medical Specialties is Glen R. Leymaster, M.D., 1603 Ormington Avenue, Evanston, Illinois 60201.

The American Board of Medical Specialties is actively concerned with the establishment, maintenance, and elevation of standards for the education and qualification of physicians recognized as specialists through the certification procedures of its member specialty boards. As a corollary, the American Board of Medical Specialties cooperates actively with all other groups concerned in establishing standards, policies, and procedures for assuring the maintenance of continued competence of such physicians.

The American Board and the Council on Medical Education of the American Medical Association, through the Liaison Committee for Specialty Boards, jointly issue the "Essentials for Approval of Examining Boards in Medical Specialties," which document is approved by the House of Delegates of the American Medical Association. Copies of the "Essentials" may be obtained from the Executive Director of the American Board of Medical Specialties or from the Department of Graduate Medical Evaluation, American Medical Association, Chicago, Illinois 60610.

Table 1.—Summary of American Specialty Board Requirements

Specialty Board	Graduates of U.S., Canadian or Puerto Rican Schools							Foreign Medical Graduates Special or Additional Requirements			All Graduates				
	License to Practice	Approved Internship or Other Prerequisite	Years of Residency or Other Formal Training	Years of Practice or Other Special Activities	Periods of Credit in Related Fields	Credit for Military Service	Alternate plans for Training	Osteopaths Eligible for Certification	Accepted Under Certain Conditions	Board Accepts Screening by Nat. Bd. Med. Exam., ECFMG, or Other Method	Special Certificate or Statement Granted	Standard Certificate Granted	Initial Applications or Registration Fee	Total Fees	Stated Limitations (years) on Applicant's Eligibility

¹Applicant is considered "Board eligible" only for number of years indicated; thereafter, new application must be submitted.

²Also certifies in the subspecialties of Cardiovascular Disease, Endocrinology and Metabolism, Gastroenterology, Hematology, Infectious Disease, Nephrology, Medical Oncology, Pulmonary Disease, Rheumatology.

³The American Board of Orthopaedic Surgery has a less than one year limit.

⁴Also certifies in subspecialties of special areas of Pediatric Cardiology, Pediatric Hematology-Oncology, Pediatric Nephrology, Pediatric Endocrinology, and Neonatal-Perinatal Medicine.

⁵Also certified in Child Neurology and subspecialty of Child Psychiatry.

⁶Also grants Certificate of Special Qualifications in Pediatric Surgery.

⁷Certification of American Board of Surgery prerequisite.

NOTE: In this table, those items are marked "x" on which the Board makes specific statement. In most instances, there are additional qualifying statements not indicated in this table. In all instances, refer for details to the board requirements which follow. While all boards may accept the foreign medical graduate under certain circumstances, they do not all specify that ECFMG certification is required. ALL FOREIGN GRADUATES WHO CONTEMPLATE SPECIALTY BOARD CERTIFICATION SHOULD CORRESPOND WITH THE APPROPRIATE BOARD AT THE EARLIEST POSSIBLE MOMENT.

Table 2.—Approved Examining Board in Medical Specialties

Name of Board	Corresponding Officer	Address	Telephone No.
American Board of Allergy and Immunology (a conjoint board of the American Board of Internal Medicine and the American Board of Pediatrics)	Herbert C. Mansmann, Jr., M.D. Executive Secretary	University City, 3624 Science Center Philadelphia, PA 19104	(215) 349-9466

Philip M. Gottlieb, Philadelphia
Peter F. Kohler, Denver
Walter E. Pierson, Seattle, Washington
Raymond G. Slavin, St. Louis, Missouri
E. Richard Stiehm, Los Angeles
Richard C. Talamo, Baltimore
Herbert C. Mansmann, Jr., M.D., Executive Secretary
American Board of Allergy and Immunology, A Conjoint
Board of the American Board of Internal Medicine and the
American Board of Pediatrics, 3624 University City Sci-
ence Center, Philadelphia, Pennsylvania 19104

Organization

The American Board of Allergy and Immunology (ABAI) was established in 1972 as a non-profit organization. It was sponsored jointly by the American Board of Internal Medicine, the American Board of Pediatrics, the American

Academy of Allergy, the American Academy of Pediatrics-Section on Allergy, the American Association for Clinical Immunology and Allergy, the American College of Allergists, and the American Medical Association-Section on Allergy. The ABAI is a conjoint Board of the American Board of Pediatrics and the American Board of Internal Medicine.

General Explanation of Requirements and Examination

The American Board of Allergy and Immunology is interested in candidates who have embarked voluntarily on a graduate program of study, with the express purpose of excelling in the practice of the specialty of allergy and immunology. In outlining its requirements, the ABAI hopes to help the candidate select superior educational programs which will develop his competency in allergy and immunology. The ABAI believes that all allergists and immunologists should have a sound fundamental knowledge of biological sciences basic to this discipline. Such knowledge is essential to the continued progress of any qualified allergist and immunologist. The ABAI anticipates that adequate knowledge in the basic sciences, as applied to this discipline, will be acquired by the candidate during a post-medical school training program. The ABAI wishes to emphasize that time and training are but a means to the end of acquiring a broad knowledge of allergy and immunology.

However, the candidate must demonstrate his competency to the ABAI in order to justify certification to practice this discipline as a specialty. The responsibility of acquiring the knowledge rests with the candidate. The responsibility of

maintaining the standards of knowledge required for certification must satisfy the general and professional qualifications listed below.

Eligibility for Examination

A candidate must qualify for examination by *having passed* the examination of The American Board of Internal Medicine, The American Board of Pediatrics or the Royal College of Physicians and Surgeons of Canada and by presentation of evidence acceptable to the Board of Directors, of the following graduate medical education:

1. at least two years of general training in Internal Medicine (with approval of the director of the second year of training and with twenty-four months of primary patient responsibility) or Pediatrics, in programs approved by the Council on Medical Education of the American Medical Association or the Royal College of Physicians and Surgeons of Canada or such other programs acceptable to the board of Directors; and
2. at least two years of residency, fellowship, or other acceptable training in Allergy and Immunology.

All candidates must enter an approved training program as of July 1, 1982 in order to meet the training requirements in allergy and immunology.

Methods of Examination

1. *The Certifying Examination.* Each applicant shall be examined in such a manner and under such rules as the Board may prescribe and must achieve a grade acceptable to the Board of Directors before receiving the certification of the Board. In all such matters, the decision of the Board shall be final.

The Certifying Examination will be administered approximately every other year. The times and places are determined by the Board and are announced in the Journal of the American Medical Association, The Annals of Allergy, The Journal of Allergy and Clinical Immunology, The Annals of Internal Medicine and The Journal of Pediatrics.

The candidate should be prepared for examination in the anatomy, pathology, physiology and bio-chemistry of hypersensitivity, as well as atopic disease. He should be proficient in clinical diagnosis, including laboratory procedures, and in the treatment of allergic and immunologic diseases in children and adults. In addition to a familiarity with atopic diseases such as hay fever, asthma, eczema, and urticaria, he will be expected to have a good understanding of other clinical states in which hypersensitivity or immune deficiencies play a major or contributory role, such as auto-immune diseases, transplantation immunity, connective tissue or rheumatic diseases, and those infective and parasitic diseases characterized by hypersensitivity reactions.

He should be familiar with the physiology of organ systems involved in allergic diseases, most particularly the lungs, especially as modified by asthma, emphysema, chronic bronchitis and other pathological states related to or confused with immunologic reactions in this organ. He should be thoroughly familiar with the benefits and dangers of drugs used in the management of allergic diseases in general, and asthma in particular.

He should be competent in recognition of many non-allergenic states that resemble allergy, including such clinical entities as physical allergies, autonomic dysfunction, and psychogenic factors in allergic diseases.

Evidence of knowledge of current research in the field of hypersensitivity will be tested by questions concerning the beta-adrenergic receptors, chemical mediators, prostaglandins, cholinergic and adrenergic receptors, complement, immunoglobulins, lymphokines, etc.

A knowledge of controversial subjects such as gastrointestinal allergy, allergy to foods and allergy to bacteria will be required. Also the candidate will be expected to be familiar with the difficulties inherent in clinical investigation, as well as the reliability and limitations of data obtained by various methodologies.

2. *Program Directors' Assessment of Competency.* All

candidates will be required to have written documentation from program directors of the quality of health care that they deliver. The program director will also be asked to support each candidate on the basis of his having excelled in the clinical areas of allergy and immunology.

Reexamination

1. Candidates who are unsuccessful on a Certification Examination in Allergy and Immunology are not restricted as to the number of opportunities for reexamination and may apply for reexamination in any year.

2. The act of filing an application for reexamination is the candidate's responsibility.

Applications

Applications are available from the Executive Office and must be completed and returned by a specific date as published in appropriate announcements.

No application will be considered until the fee and all required supporting data, including letters of recommendation, have been received by the Executive Office.

Fees

The Board is a non-profit organization. The fees for examination and certification have been computed on a basis of maintaining an administrative office and conducting examinations. The Board reserves the right to change the fee when necessary.

The 1979 Registration and Examination fee was \$750.00. Candidates whose applications are rejected received a refund of \$600.00; the Board retains \$150.00 of the fee to cover the application evaluation costs incurred in the review of the candidate's application.

The Certification fee, previously \$50.00, payable after successful passage of the certifying examination, was eliminated in 1977.

Those physicians previously certified by the Subspecialty Board of Allergy of The American Board of Internal Medicine or the American Board of Pediatrics may obtain a certificate from the board by transmitting a fee of \$50.00 with the proper form to the Executive Secretary.

Statements of Eligibility

The Board no longer issues statements of "eligibility" for its examinations. Upon request of the registered candidate it will reveal progress toward certification.

Cancellations

Candidates who are accepted for examinations but fail to appear or who cancel after assignment to an examination center is completed will forfeit their Registration and Examination fee. For each subsequent application for examination they will be required to pay an additional Registration and Examination fee.

THE AMERICAN BOARD OF ANESTHESIOLOGY

- Robert M. Epstein, President, Charlottesville, Virginia
- Oral B. Crawford, Vice President, Springfield, Missouri
- James F. Arens, Galveston, Texas
- Harry H. Bird, Hanover, New Hampshire
- Richard H. Kitz, Boston
- C. Phillip Larson, Jr., Stanford, California
- Alan S. Sessler, Rochester, Minnesota
- Wendell C. Stevens, Iowa City, Iowa
- E. S. Siker, Secretary-Treasurer, Pittsburgh, Office of the Board, 100 Constitution Plaza, Hartford, Connecticut 06103
- Martin Helrich, Assistant Secretary-Treasurer, Baltimore

Certification

To be certified as a Diplomate of The American Board of Anesthesiology, each applicant must:

1. Hold a current and unrestricted license to practice medicine;

Anesthesiology

2. Complete the accredited Continuum of Education in Anesthesiology as defined below. All such training must follow the date upon which the medical or osteopathic degree has been conferred:

3. Have on file with The American Board of Anesthesiology a satisfactory Certificate of Clinical Competence following the required 24 months of CLINICAL ANESTHESIA training as described subsequently; and

4. Complete all examination requirements of the Board.

The Continuum of Education

The Continuum of Education in Anesthesiology consists of four years of training subsequent to the date that the medical or osteopathic degree has been conferred. Twelve months of the Continuum must be devoted to clinical training other than clinical anesthesia and is referred to as CLINICAL BASE. Acceptable training for the 12 months of CLINICAL BASE shall include training in a rotating internship, internal medicine, pediatrics, surgery, or any of the surgical specialties, obstetrics and gynecology, neurology, family practice, or any combination of these as approved for the individual candidate by the director of his or her training program in anesthesiology. Twenty-four months must be devoted to approved residency training in clinical anesthesia and is referred to as CLINICAL ANESTHESIA. Not less than 20 of the 24 months of CLINICAL ANESTHESIA must be concerned with the management of procedures for rendering a patient insensible to pain during surgical, obstetrical and certain medical procedures and the support of life functions under the stress of anesthesia and surgical manipulations. The remaining 12 months of the Continuum must be completed in a curriculum designed by the program director in consultation with the resident and is referred to as the SPECIALIZED YEAR. This year of training shall be pursued in one or more of such areas as research, clinical anesthesia that is more advanced and specialized than the usual experience gained during the 24 months of CLINICAL ANESTHESIA or in a related basic science or clinical discipline other than anesthesiology which is a planned and approved part of the program. The CLINICAL BASE YEAR and the 24 months of CLINICAL ANESTHESIA and the SPECIALIZED YEAR, if clinical, must be spent in programs accredited by the Liaison Committee on Graduate Medical Education or, in Canada, in an institution approved by the Royal College of Physicians and Surgeons of Canada. The CLINICAL BASE YEAR may also be spent in programs accredited by the American Osteopathic Association.

The time during the Continuum at which the resident receives training in either CLINICAL ANESTHESIA or CLINICAL BASE will be decided by the director of the training program in anesthesiology following consultation with the individual resident. The program director is encouraged to plan that at least a portion of the CLINICAL BASE occur early in the Continuum.

Examination System

To enter the Examination System of The American Board of Anesthesiology the applicant shall:

1. Have graduated from a medical school approved by the Liaison Committee on Medical Education, or have met medical educational requirements otherwise acceptable to The American Board of Anesthesiology; and

2. Provide evidence satisfactory to the Board of having been awarded a medical or osteopathic degree acceptable to the Board; and

3. Provide satisfactory evidence to the Board of having a current and unrestricted license to practice medicine and/or osteopathy in one of the United States or in Canada or of having successfully completed the Federation Licensing Examinations (FLEX), National Board of Medical Examiners (NBME) or Licensure of the Medical Council of Canada (LMCC) examinations which provide eligibility for such licensure; and

4. Submit proof to the Board that he or she will have satisfactorily completed before the date of examination at

least three years of the four year Continuum of Education in Anesthesiology, including 18 months of CLINICAL ANESTHESIA after receiving a medical or osteopathic degree.

Evaluation of various aspects of the applicant's performance will be solicited by the Board in determining his or her qualifications for admission to the Examination System. Such information may be requested from the residency program director and others familiar with the applicant's professional activities. The response of the program director will be given considerable weight in these deliberations. For those entering the residency program subsequent to June 30, 1977 the Clinical Competence Report from the department and the program director's evaluation will be used as the basis for assessing admission qualifications.

The Board shall determine that entry into the Examination System is merited when a judgment of adequate levels of scholarship and clinical competence can be made from the information submitted.

The Board intends that its certification reflect evidence of qualification as a physician, and as a specialist and consultant in anesthesiology. The processes which lead to certification by the Board are intended to evaluate the attainments of the applicant in this regard. The applicant's general qualifications as a physician will be evidenced by such determinations of accrediting agencies acceptable to the Board.

To this end the successful completion of a qualifying examination in general medical will be required before embarking on the second CLINICAL ANESTHESIA YEAR and the SPECIALIZED YEAR. Acceptable evidence of such completion includes (1) a current and unrestricted license to practice medicine in one of the United States or in Canada; (2) successful completion of Parts I, II and III of the examination of the National Board of Medical Examiners; or (3) successful completion of the Federation Licensing Examinations commonly known as FLEX or (4) successful completion of Parts I, II, and III of the examination of the National Board of Osteopathic Examiners. Retroactive credit will not be given. Credit for satisfying this requirement will be based on the date of the qualifying examination rather than the date of subsequent notification. This provision applies to all residents completing two years of the CLINICAL ANESTHESIA after December 31, 1977.

Certificate of Clinical Competence

The Board requires that each Residency Training Program file, on forms provided by the Board, an Evaluation of Clinical Competence in December and June on behalf of each resident who has spent any portion of the prior six months in CLINICAL ANESTHESIA training. By the time of the examination filing deadline, the Residency Training Program must have submitted an evaluation indicating that the applicant has demonstrated satisfactory clinical competence commensurate with 18 or 24 months of CLINICAL ANESTHESIA training. Failure to have such documentation on file with the Board will postpone for at least a year the applicant's entry into the Examination System. This applies to all applicants starting residency July 1, 1977 and thereafter. Prior to certification, candidates are required to have a Certificate of Competence on file with the Board attesting to satisfactory clinical competence during a final six months of training in CLINICAL ANESTHESIA. This applies to any candidate completing 24 months of the Continuum subsequent to December 31, 1974.

Alternate Pathways

The granting of credit for such Alternate Pathways is at the discretion of the Board and must be sought on an individual basis. A validation form will be provided following the successful completion of the written examination.

The following options may be offered in lieu of the SPECIALIZED YEAR of the Continuum in meeting the requirements for certification:

1. Two years of practice in the field of anesthesiology following completion of the CLINICAL BASE and the two years of CLINICAL ANESTHESIA.

2. Accredited years of training in a medical specialty

related to anesthesiology and recognized by the American Board of Medical Specialties may qualify for one or two years of practice time.

3. A Ph.D. degree in a scientific discipline related to anesthesiology.

Absence From Training

The Board's policy on any and all absences from training is that the total absence during each of the two years of CLINICAL ANESTHESIA may not exceed twenty working days. Attendance at scientific meetings, not to exceed five working days per year, shall be considered a part of the training program. Duration of absence during the CLINICAL BASE and SPECIALIZED YEAR may conform to the policy of the institution and department in which that portion of the training is served. Absences in excess of those specified will require lengthening of the applicant's total training time to the extent of the additional absence.

Examinations

Each applicant becomes a candidate when accepted by the Board for the purposes of examination, and shall be examined in such a manner and under such rules as the Board from time to time may prescribe. The Board, acting as a committee of the whole, reserves the right to reject an applicant for any reason deemed advisable.

Application for admission to the examination system may be made for the first written examination which will occur after a physician has completed three years, including 18 months of CLINICAL ANESTHESIA, of the Continuum of Education in Anesthesiology. A grace period through August 31 will be permitted so that physicians completing three years of the Continuum by August 31st may apply for the immediately preceding July written examination.

Application must be made to the Secretary upon a form prescribed by the Board, procured only on written request of the applicant. Completed applications must be received in the Board office by January 10th prior to the date of examination. Eligibility rulings are made by the Board on recommendation of the appropriate committees or their designates.

1. **Written Examination.** Candidates may take this examination upon completion of three years of the Continuum. Written examinations are held annually in locations throughout the United States on a Saturday in July. Written examinations cover the basic and applied aspects of physiological, physical and clinical science. A passing grade, as determined by the Board, is required.

In the event a candidate fails the first written examination for which he or she is eligible, two additional opportunities will be provided at yearly intervals. The three year period begins on the date an applicant is first declared eligible for the written examination.

2. **Oral Examination.** After completion of the Continuum and successful completion of the written examination, the candidate's qualifications are reviewed and he or she may be declared eligible to appear for the oral examination. However, at least six months must elapse between the written and oral examinations. Oral examinations are conducted in the spring and fall of each year. Examiners consist of Directors of the Board and others who assist as associate examiners. Oral examinations evaluate all phases of anesthesiology, but emphasize clinical practice.

In the event a candidate does not pass the first oral examination for which he or she is eligible, two additional opportunities will be afforded with the provision that there be an interval of no less than the time between alternately regularly scheduled examinations between opportunities. This three year period begins on the date a candidate is first declared eligible for the oral examination.

Failure to take an examination constitutes an opportunity just as much as failure to pass an examination. Under certain circumstances the Board, entirely at its discretion, may excuse a candidate from any scheduled examination without penalty, provided the request for such absence is filed prior to time of the examination. If an applicant fails to pass either the written

or oral examination within the specified periods, his or her application will be declared void and a new application will be required for admission to the Examination System.

A reexamination fee of \$100.00 will be charged for each repeat of either the written or oral examination.

A cancellation fee of \$100.00 will be charged when a candidate fails to appear for any cause at an oral examination for which he or she was properly scheduled.

The Board reserves the right to limit the number of candidates to be admitted to any examination.

Reapplication

A candidate who has failed to complete the examinations in the prescribed time for any reason may reapply by submitting a new application. Such application shall be subject to the fees, rules and privileges that apply at the time of reapplication. If the applicant is adjudged to meet existing requirements, he or she will be again admitted to the Examination System. This privilege shall apply retroactively without limitation, but in all instances the candidate must pass both the written and oral examinations under the new application.

Eligibility

A candidate eligible for admission to the examination will be so notified by the Board after examination of credentials. Each candidate remains eligible for the number of written and oral examinations stated above. If successful completion of both written and oral examinations has not occurred within seven years, the application is voided.

The term "Board eligible" is specifically mentioned to indicate that it is neither recognized nor used by The American Board of Anesthesiology.

The Board will reply to any inquiries requesting the status of individuals with one of the following statements:

1. The physician is Board Certified.
2. The physician is in the Examination System.
3. The physician is neither BOARD CERTIFIED nor in the Examination System.

Fee

The fee shall be \$325.00. An initial payment of \$125.00 must accompany the application (of which \$100.00 will be returned if the candidate is not accepted for examination). The balance (\$200.00) must be paid before taking the examination.

The Board is a non-profit organization. The fees for examination and certification are computed on a basis of cost of maintaining the functions of the Board. The Board reserves the right to change the fee when necessary.

Revocation of Certificate

A certificate is issued by the Board with the understanding that it remains the property of the Board during the life of the Diplomate. Any certificate issued by the Board shall be subject to revocation in the event that:

1. The issuance of such certificate or its receipt by the person so certified shall have been contrary to, or in violation of, any provision of the Certificate of Incorporation of this Board or its Bylaws; or
2. The person certified shall not have been eligible to receive such certificate whether or not the facts making him or her ineligible were known to, or could have been ascertained by the Board or any of the Directors at the time of the issuance of such certificate; or
3. The person certified shall have made any misstatement of fact in his or her application for such certificate or in any other statement or representation to the Board or its representatives; or
4. The person certified shall fail to maintain a moral, ethical, and professional standing satisfactory to the Board.

The Board shall be the sole judge of whether or not the evidence or information before it is sufficient to require or permit revocation of any certificate issued by the Board, and the decision of the Board shall be final.

Colon and Rectal Surgery**Additional Information**

Proper forms for making application and other information may be obtained by writing to the Secretary-Treasurer, E. S. Siker, M.D., The American Board of Anesthesiology, 100 Constitution Plaza, Hartford, Connecticut 06103.

Application blanks contain the following statement:

"I hereby make application to The American Board of Anesthesiology, Inc., for the issuance to me of a Certificate of Qualification as a Consultant in Anesthesiology and for examination relative thereto, all in accordance with and subject to its rules and regulations, and enclose fee of \$325.00. I agree to disqualification from examination or from the issuance of a Certificate of Qualification or to forfeiture and redelivery of such Certificate in the event that any of the statements hereinafter made by me are false, or in the event that any of the rules governing such examinations are violated by me, or in the event that I did not comply with or shall violate any of the provisions of the Certificate of Incorporation or Bylaws of The American Board of Anesthesiology, Inc., or both, as then constituted. I agree to hold the American Board of Anesthesiology, Inc., its members, examiners, officers and agents free from any damage or complaint by reason of any action they, or any of them, may take in connection with this application, such examinations, the grade or grades given with respect to any examination, or the failure of said Board or Corporation to issue to me such Certificate of Qualification. I understand that the score of my first examination will be reported to the Director of the program in which I completed my training in Clinical Anesthesia, and the score may also be used to construct a performance index for that program."

Recertification

The Board plans to offer recertification to its Diplomates in 1984. Further details of this process will become available at a later date.

AMERICAN BOARD OF COLON AND RECTAL SURGERY

Eugene S. Sullivan, President, Portland, Oregon

Stanley M. Goldberg, Vice President,

Minneapolis, Minnesota

H. Whitney Boggs, Shreveport, Louisiana

Thomas A. Fox, Jr., Detroit, Michigan

A. W. Martin Marino, Jr., Brooklyn, New York

Bertram A. Portin, Buffalo, New York

John E. Ray, New Orleans, Louisiana

Eugene P. Salvati, Plainfield, New Jersey

Frank J. Theuerkauf, Jr., Erie, Pennsylvania

G. Bruce Thow, Urbana, Illinois

Norman D. Nigro, Secretary-Treasurer,

615 Griswold, Suite 516,

Detroit, Michigan 48226

General Qualifications and Requirements

All candidates shall comply with the following regulations:

1. A candidate shall limit practice to colon and rectal surgery, shall appear personally before the Board and shall submit to the required examinations.

2. A candidate may be required to deliver to the Board sufficient case reports to demonstrate proficiency in colon and rectal surgery.

3. A bibliography of papers and books published by the candidate shall be submitted to the Board upon its request.

Professional Qualifications

1. A candidate shall be a graduate of a Medical school approved by the Liaison Committee on Medical Education. Foreign medical graduates should hold an ECFMG Certificate.

2. A candidate shall have a license to practice medicine in the country of his residence.

3. In addition to the first postgraduate year, the candidate shall have completed four years of graded general surgical training approved by the Liaison Committee on Graduate Medical Education, and shall have completed one year of an

approved residency in colon and rectal surgery.

4. Applicants who have completed the first postgraduate year and four years of approved graded general surgical training, upon special application and subsequent approval by the American Board of Colon and Rectal Surgery, may be admitted to examination after completing two years of an approved preceptorship in colon and rectal surgery. The preceptorship must be approved by the Board prior to the beginning of the program.

5. Applicants who enter colon and rectal surgery training on and after July 1, 1980, must successfully complete the Qualifying Examination of the American Board of Surgery prior to examination by the American Board of Colon and Rectal Surgery.

Application for Examination

Each candidate for examination must complete and submit an Application for Examination which may be obtained from the Secretary of the Board. Applications must be submitted before March 1 of each year.

Within one month after conclusion of the training program, the applicant must submit to the Secretary of the Board a prescribed form, listing all operative procedures performed during the training period. This form is available from the Secretary of the Board and must be countersigned by the Program Director when it is submitted.

The application must also be accompanied by two unmounted, recent photographs of the applicant, and the required application fee.

The acceptability of a candidate for examination depends not only upon completion of the requirements listed under "Qualifications of Candidates," but also upon information available to the Board regarding the candidate's professional maturity, surgical judgment, and technical competence.

Examinations

Examinations are conducted at times and places determined by the Board and are announced in the *Journal of the American Medical Association* and *Diseases of the Colon and Rectum*.

Part I:

This consists of a comprehensive written examination largely in the basic sciences.

Candidates who have passed Part I of the American Board of Surgery are exempt from taking Part I of The American Board of Colon and Rectal Surgery.

Part II:

This may be required at the discretion of the Board. It is a practical examination which is held in the community in which the candidate conducts his professional activities. The candidate will be notified by the Secretary if Part II is required. The examination includes evaluation of:

1. One colon or rectal resection and one anorectal procedure
2. Hospital rounds
3. Hospital and office records
4. Office practice
5. Colonoscopy

Part III:

This consists of written and oral examinations on the theory and practice of colon and rectal surgery, with separate examinations in pathology and roentgenologic interpretation of diseases of the colon and rectum.

The oral portion of the examination is conducted by members of the Board or its designated examiners. An attempt is made to ascertain the candidate's knowledge of current literature on colon and rectal surgery, his knowledge of the basic sciences, and the extent of his clinical experience and other qualifications.

Re-examinations

A candidate who has failed may be re-examined after one year has elapsed.

The act of filing an application for re-examination is the candidate's responsibility.

Candidates who have failed re-examination may petition the Board for another examination after two years have elapsed. Acceptable evidence of additional preparation shall be submitted with this petition.

Status of Applicants

The Board no longer uses the terms "Board eligible" or "Board qualified." An individual's standing with the Board varies according to the current status of his credentials.

A candidate must apply to take the Board's certifying examination within five (5) years after completion of approved colon and rectal training.

A candidate whose application for examination has been approved and who does not take the examination within three (3) years must be re-approved by the Board.

A candidate whose application for examination has been approved must successfully complete all examinations and achieve certification within five (5) years of such approval. Should a candidate fail to become certified within this period, he must have further training before reapplying for examination.

In exceptional or unusual circumstances, the Board may, at its discretion, waive one or more of the limitations listed specified under "Status of Applicant."

Fees

Fees:

Application fee: A non-refundable fee of \$100.00 shall accompany the application.

Examination fee: A fee of \$400.00 is due and payable when the candidate is notified that he has been approved for examination.

Re-examination fee: A fee of \$200.00 is due and payable when the candidate is notified that he has been approved for re-examination.

All fees shall be made payable to the American Board of Colon and Rectal Surgery and shall be sent to the Secretary.

AMERICAN BOARD OF DERMATOLOGY

- Richard B. Stoughton, President, San Diego, California
- J. Graham Smith, Jr., Vice President, Augusta, Georgia
- Richard L. Dobson, Buffalo, New York
- John H. Epstein, San Francisco
- James H. Graham, Washington, D.C.
- Harry H. Hurley, Upper Darby, Pennsylvania
- G. Thomas Jansen, Little Rock, Arkansas
- Frederick A. J. Kingery, Portland, Oregon
- John M. Knox, Houston, Texas
- Harold O. Perry, Rochester, Minnesota
- Peyton E. Weary, Charlottesville, Virginia
- Clarence S. Livingood, Executive Director,
American Board of Dermatology, Inc.,
Henry Ford Hospital,
Detroit, Michigan 48202

Requirements for Eligibility to Take the Examination

Each applicant must satisfy the following requirements before he or she is eligible to take the examination of the Board.

A. General Qualifications.

(1) Graduation from an approved medical school in the United States of America or Canada. Graduates from foreign medical schools are required to have the standard certificate of the Educational Council for Foreign Medical Graduates (ECFMG) or the certificate of the National Board of Medical Examiners. Graduates of osteopathic schools who have satisfactorily completed the residency training requirements outlined below in Section B, are eligible for examination.

(2) A license to practice in one of the United States of America, or license of the Medical Council of Canada.

B. Residency Training Requirements

(1) Candidates for certification by the American Board of Dermatology are required to have a total of four years of postgraduate training. One year, usually the first, consists of

broadly-based training, such as may be provided by internal medicine, general surgery and pediatrics, but training in other disciplines may be acceptable. Three years of full-time training as a resident in a dermatology residency training program of an institution approved by the Residency Review Committee for Dermatology and the LCGME, are required. Details in regard to the approved dermatology residency training programs are listed in the *Directory of Accredited Residencies* published annually by the AMA. At least one-half of the time spent in the three years of dermatology residency training must involve the direct care of patients.

Candidates may take up to twenty-four of their thirty-six months of dermatology residency training at an institution approved for less than three years of training but must spend at least twelve of the thirty-six months, full-time, in a program approved for three years of training.

(2) Part-time preceptee training with a staff member is acceptable *only* as a scheduled component of the program in a three-year training center. Preceptee training must occupy no more than 50% of the trainee's time and for no longer than one year. Such a preceptorship is the direct responsibility of the director of the training program.

(3) Candidates who have had at least one year of residency training in an accredited internal medicine, pediatrics, family practice or pathology program may apply for six months of training credit, providing this one year is not used in fulfilling the requirement of the "broadly-based" year of training referred to above (#1). The decision in regard to possible six months of training credit under the above circumstances is not made by the Board until (a) the candidate has completed at least one year of training in dermatology and (b) the first annual report plus a letter concerning the requested credit have been forwarded to the Board office by the director of the candidate's dermatology program.

(4) All training must be completed in a manner satisfactory to the Board. Training must be completed within five years after the beginning of dermatology residency except where military service or other compelling circumstances intervene.

Registration for the Examination of the Board

Candidates who have completed the training requirements as outlined above are eligible to apply to take the examination of the Board. Candidates should request an Application for Certification form from the office of the Executive Director of the Board. The completed application form *must* be filed with the Board office before April 1st of the year in which the candidate plans to take the examination. Physicians who complete their residency training in dermatology by July 1st of a given year are eligible to apply to take the examination in the fall of the year. It is emphasized that it is the candidate's responsibility to send a completed application form to the Board if he or she plans to take the certifying examination of the Board.

In assessing the credentials of candidates who apply voluntarily for certification by the Board, the Requirements Committee review the application, letters of reference, and annual evaluation reports from the candidate's training director.

A candidate is not considered an "active" candidate until his or her application has been received and approved by the Board. After the application is approved, the candidate is required to take the examination within three years. Candidates who do not exercise the examination privilege within three years of the date they are declared eligible will be required to file a new application and have their eligibility for examination reviewed by the Requirements Committee. If the re-application is approved by the Board, the candidate is again eligible to take the examination for another three-year period.

The Board does not use the term "Board-eligible" in corresponding with directors of hospitals and others who send inquiries to the Board office. On written request by the candidate, the Board will send to the candidate a letter stating his or her status with the Board at any given time; this letter

Dermatology

may be used in applying for hospital privileges or for other purposes.

Board Examination

The certifying examination consists of two parts. Part I is a comprehensive written examination. Among the topics included in this part of the examination are the following: clinical dermatology, dermatopathology, sexually transmitted diseases, dermatologic surgery, internal medicine as it pertains to cutaneous diseases, cutaneous allergy and immunology, cutaneous oncology, photobiology and cutaneous microbiology as well as anatomy, physiology, biochemistry, radiation physics, radiation therapy, physical therapy, pharmacology, genetics, hematology and electron microscopy as related to dermatology. Considerable emphasis is placed on comprehensive knowledge of the literature.

Part II consists of three sections: clinical dermatology, clinical pathology and microscopic dermatopathology. In clinical dermatology and clinical pathology the questions relate to projected pictorial material. Examples of the type of projected pictorial material which are used include photographs of patients, histopathologic sections, fungal cultures, culture mounts, bacterial cultures, Tzanck preparations, skin scrapings and smears, roentgenograms, fluorescent microscopy, dark field examinations, parasites affecting the skin, and electron microscopy. In microscopic dermatopathology, the questions relate to histopathologic slides which candidates examine using their own microscopes. Candidates are required to bring their own microscopes for the viewing of the histopathologic slides.

It is necessary for candidates to pass both Part I and Part II of the examination in order to be certified. If a candidate passes one part of the examination and not the other, thus, failing the certifying examination, it is not necessary to repeat that part of the examination which he or she passed.

The examination is given annually in the fall over a two-day period involving a total of approximately nine hours. In 1980, it will be held on November 2 and 3 at the O'Hare/Kennedy Holiday Inn in Rosemont, Illinois, which is in the O'Hare Airport area of Chicago.

Re-examination

Candidates who fail Part I, Part II or both parts of the certifying examination are eligible to repeat the examination the following year. Candidates who fail the re-examination three times or who do not exercise the re-examination privilege within three years of the date they failed will be required to file a new application form and have their eligibility for examination reviewed by the Requirements Committee.

It is the responsibility of the candidate to notify the Board of his or her intent to take the re-examination. The request for re-examination and the appropriate fee (see Fees for Examination and Re-examination) must be mailed to the office of the Board no later than April 1st of the year in which the candidate wishes re-examination.

Certification

After meeting the above requirements and passing the examination, the candidate will be awarded a certificate which acknowledges that he or she has completed the required course of graduate study and clinical training, has met other specific standards and qualifications, has passed the examination conducted by the Board and is then referred to as a diplomate of the American Board of Dermatology, Inc. The names of diplomates of the Board appear in the *Directory of Medical Specialists* published for the American Board of Medical Specialties by Marquis Who's Who, Inc. of Chicago, Illinois.

Each certificate is subject to revocation in the event that (a) the physician so certified shall not have been eligible to receive such certificate, whether or not the facts concerning his or her ineligibility were known or could have been ascertained by the Directors of the Board at the time of the issuance of the certificate; (b) the physician so certified shall have made

any material misrepresentation or omission in the application for such certificate or in any other statement to the Board or its representatives; (c) the physician so certified shall have been convicted by a court of competent jurisdiction of a crime relating to or arising out of the practice of medicine.

Fees

The members of the Board serve without compensation. Fees are based on the actual expenses incurred in office administration and in conducting the examination.

The total examination fee is \$550.00 payable when the application is filed. The fee for re-examination is \$450.00. All checks are to be made payable to the American Board of Dermatology, Inc.

The fee for the examination for special competence in dermatopathology is \$550 payable when your application is submitted.

Certification for Special Competence in Dermatopathology

Jack M. Layton, Chairman, Tucson, Arizona
James H. Graham, Vice-Chairman, Bethesda, Maryland
Robert W. Goltz, Minneapolis, Minnesota
Robert B. Jennings, Durham, North Carolina
Vernie A. Stenbridge, Dallas, Texas
Richard B. Stoughton, San Diego, California

Special competence certification in dermatopathology is a joint and equal function of The American Board of Pathology (ABP) and the American Board of Dermatology (ABD). Such function will relate to qualifications of candidates, standards of examination, and the form of the certificate.

A. Prerequisites

The American Boards of Dermatology and Pathology will admit candidates to examination for certificates of special competence in dermatopathology who are otherwise qualified and who have had one of the following types of training or experience.

1. Applicants already holding a basic certificate from the American Board of Dermatology or the American Board of Pathology (anatomic pathology, or anatomic and clinical pathology) and one year of full-time training in dermatopathology in a program accredited by the Liaison Committee on Graduate Medical Education.

2. Applicants who are diplomates of both the American Board of Dermatology and the American Board of Pathology.

3. Applicants already holding a basic certificate from the American Board of Dermatology or the American Board of Pathology (anatomic pathology, or anatomic and clinical pathology) and two years of experience in dermatopathology in a position acceptable to the Committee for Dermatopathology. The training requirements for basic certification must have been completed before December 31, 1977 and the two years of acceptable experience must have been completed before December 31, 1979. The final expiration date for applications under this prerequisite is December 31, 1981.

B. Training

Training programs in dermatopathology will be an equal and joint function of the Departments of Dermatology and Pathology.

Candidates may obtain an application as follows:

Pathologists — Dr. M. R. Abell
Executive Director
The American Board of Pathology
112 Lincoln Center
5401 West Kennedy Boulevard
P.O. Box 24695
Tampa, Florida 33623

Dermatologists — Dr. Clarence S. Livingood
Executive Director
American Board of Dermatology
Henry Ford Hospital
2799 West Grand Boulevard
Detroit, Michigan 48202

Publications of the Board

- 1) Booklet of Information.
- 2) *Guide for Residency Programs in Dermatology. (Residency Review Committee for Dermatology)*

The institutions approved for Dermatology residency training are listed in the *Directory of Residency Training Programs* published annually by the American Medical Association.

All correspondence should be sent to:

 H. Judson Reamy, Dover, Ohio
 G. Gayle Stevens, Birmingham, Alabama
 Nicholas J. Piscano, Executive Director and Secretary,
 2228 Young Drive, Lexington, Kentucky 40505

General Information

The American Board of Family Practice gives a certifying and recertifying examination annually in various centers throughout the United States. The certifying examination covers a period of two (2) days, and the recertifying examination is a one (1) day examination.

General Qualifications

A. The applicant must be of high moral and professional character.

B. The applicant must have graduated from a medical school in the United States or Canada which is acceptable to the Board and is accredited by the Liaison Committee on Medical Education or the American Osteopathic Association. Graduates from foreign medical schools (outside the United States or Canada) must have a currently valid and unrestricted license to practice medicine in the United States or Canada.

C. All candidates, including U.S. and Canadian medical student graduates, must hold a valid and unrestricted license to practice medicine in the United States or Canada. Career military physicians may request waiver of licensure requirements by submitting proper documentation of their military career status. In cases where such waiver is granted and the physician subsequently leaves the military service, the requirement for licensure becomes immediately effective upon departure from the service in order to maintain Diplomat status.

Specific Qualifications

Before a candidate is permitted to take the certification examination, he/she must complete a three-year Family Practice residency program which is accredited by the Liaison Committee on Graduate Medical Education (LCGME). Verification of such satisfactory completion must be stated in writing from the Director of the Program. All applications are subject to the approval of the Board and the final decision will rest with the Board alone. Only accredited Family Practice training programs (residencies) are recognized. Applicants for examination MUST HAVE A MINIMUM OF 36 MONTHS OF ACCREDITED graduate training obtained SUBSEQUENT to receipt of M.D. or D.O. degree. Graduate training (residen-

cies) must be completed no later than June 30, 1980.

The latter two years must be in continuity in the same accredited Family Practice program unless prior approval of the Board has been obtained. This allows flexibility in the first year (G-1) but maintains our desire for continuity (in one program) for the latter two years (G-2 and G-3) and allows sufficient experience in a Family Practice Center.

All candidates' experiences may be subject to review and approval by the Credentials Committee. Any deviation from the above must have prior approval of the Credentials Committee.

A resident may be accepted into the beginning of a G-2 year of an accredited Family Practice program after satisfactory completion of a G-1 year of another accredited Family Practice program or its equivalent. In such cases, the Director of the G-2 year to which the resident is transferring must evaluate and document to the American Board of Family Practice PRIOR TO SUCH TRANSFER that he/she has carefully evaluated the resident's G-1 performance and that the curriculum of the G-1 year is comparable to permit transfer to the G-2 year. This documentation must be approved by the Board PRIOR to such actual transfer.

Transfer after G-2 year (example: from one program's G-2 year to another program's G-3 year) is discouraged by the Board. In the event of special circumstances requiring such a transfer, between two accredited Family Practice programs, an appeal must be made to the Board. The appeal must be made by the resident in writing to the Board with reasons fully stated and accompanied by supporting documents by the Directors for both the G-2 and the G-3 years of the separate programs.

Resident candidates not taking the Board examination within three years after completion of the accredited Family Practice residency are thereafter required to document 50 hours of bona fide continuing education per year to qualify for examination.

Osteopathic Physicians

Osteopathic physicians who have graduated from an American Osteopathic Association approved school of osteopathic medicine in the United States may qualify if they meet all the same residency requirements as specified for M.D. graduates described above. They may apply to LCGME accredited programs in the first year (G-1) or in the cases of osteopaths who have completed AOA approved internships (G-1 year), they may be given credit for that G-1 year as equivalent to an LCGME accredited G-1 year if, and only if, the osteopath is admitted to an LCGME accredited Family Practice program G-2 year then goes on to complete satisfactorily the same LCGME accredited Family Practice program (the G-2 and G-3 year sequence) as required of all candidates. However, osteopathic physicians who have satisfactorily completed an AOA internship (G-1 year) and who apply for the latter two years (G-2/G-3) of an LCGME accredited Family Practice residency program, may use the G-1 year towards the 36-month graduate education requirement if the individual Program Director of the LCGME accredited program to which the osteopathic physician is applying finds that the G-1 year of that osteopathic physician is acceptable and equivalent to an LCGME accredited G-1 year or to the G-1 year of that particular LCGME accredited Family Practice program to which the osteopath is transferring. In such cases, if the LCGME accredited Family Practice Program Director sees fit, he/she may allow the osteopathic physician to enter the G-2 year of the LCGME accredited program provided that such arrangements have been approved by this Board prior to admission to the G-2 level. The American Board of Family Practice requires in such cases that the Director of the G-2/G-3 sequence of an accredited Family Practice program, which the osteopathic physician seeks to enter, submit full documentation for his/her satisfaction that the G-1 year of such osteopathic physician is suitable to allow entry to the G-2/G-3 sequence of the accredited Family Practice program. Such transfer must have approval of this Board PRIOR

Family Practice

to the entry of the resident into the G-2 year. To qualify to take the examination, the resident must satisfactorily complete the G-2 and G-3 sequence of the accredited Family Practice program.

All candidates (M.D. or D.O.), must satisfactorily complete at least 36 months of accredited graduate medical education. Only the G-1 year may be fulfilled by an AOA approved internship year. The training beyond the G-1 year of all osteopathic candidates (G-2 and G-3 years) must be in an LCGME accredited Family Practice residency program.

Canadian Resident Applicants

Physicians who satisfactorily complete a Family Practice residency approved by the College of Family Physicians of Canada (usually two years) must have a third year of accredited Family Practice residency in the United States or Canada. Canadian resident applicants must meet the 36-month graduate education requirement as well as other requirements listed in the brochure for United States resident applicants.

Physicians who have been certified by examination by the College of Family Physicians of Canada (Certificants), and who hold a valid and unrestricted license to practice in the U.S. or Canada and:

1. Have established residence in the USA for not less than the immediate past two (2) years; and
2. Since residing in the US have accumulated a minimum of fifty (50) hours per year of continuing medical education approved by the American Board of Family Practice; and
3. Are actively engaged in the practice and/or teaching of Family Practice on a full-time basis;

may be permitted to apply for examination for certification by the American Board of Family Practice. In cases of Canadian Certificants, a special application form must be completed.

Revocation

A. Each certificate issued by the Board of Directors shall be subject to revocation in the event that:

1. The issuance of such certificate or its receipt by the person so certified shall have been contrary to, or in violation of, any provision of the Articles of Incorporation of the American Board of Family Practice, Inc., or of the Bylaws of the American Board of Family Practice; or
2. The person certified shall not have been eligible to receive such certificate, irrespective of whether or not the facts constituting him/her so ineligible were known to, or could have been ascertained by, the Directors of the corporation at the time of the issuance of such certificate; or
3. The person so certified shall have made any misstatement of fact in his/her application for such certificate or in any other statement or representation to the corporation or its representatives; or
4. The person so certified shall at any time have neglected to maintain the degree of competency in the field of Family Practice as established by the Board.

B. The Board of Directors of this corporation shall have sole power and authority to determine whether or not the evidence of information before it is sufficient to constitute grounds for revocation of any certificate issued by this corporation. The Board of Directors may, however, at its discretion, require any person so certified to appear before the Board of Directors, upon not less than twenty (20) days' written notice by registered mail, and to show cause, at the time and place specified in such notice, why his certificate should not be revoked. The failure of any person so notified to appear as required in such notice shall, at the discretion of the Board of Directors, constitute cause for revocation of his certificate. The decision of the Board of Directors in all such matters shall be final.

Board Eligible

The American Board of Family Practice, as well as many other Boards, does not recognize nor use the term "Board Eligible" and does not issue statements concerning "Board

Eligibility." It informs an applicant of admissibility to an examination to be given on a specific date after a formal application has been reviewed and approved.

Recertification

Certification will expire at the time designated on the certificate and in order to maintain Diplomate (certified) status, one must be re-certified periodically (example: every six years) by the process delineated by the Board.

Re-examination

Candidates who fail the examination will be given the opportunity to take future examinations as may be held annually. There is no limit to the number of times a qualified candidate may take the examination. Examinations are held only on dates announced by the Board and these are usually on an annual basis. Examinations will not be given at any other time. Requirements for re-examination are the same as listed in this booklet except that a candidate who fails an examination and has not taken the next immediately scheduled examination will be required to show evidence of 50 hours of approved continuing education (as defined in section X) per year for every year thereafter to be qualified to sit for the examination. In addition, the candidate must hold a valid and unrestricted license to practice medicine and surgery in the United States or Canada. Full fees will be charged for each examination.

Official ABFP Definition of Family Practice

"Family Practice is comprehensive medical care with particular emphasis on the family unit, in which the physician's continuing responsibility for health care is not limited by the patient's age or sex nor by a particular organ system or disease entity.

Family Practice is the specialty in breadth which builds upon a core of knowledge derived from other disciplines—drawing most heavily on Internal Medicine, Pediatrics, Obstetrics and Gynecology, Surgery and Psychiatry—and which establishes a cohesive unit, combining the behavioral sciences with the traditional biological and clinical sciences. The core of knowledge encompassed by the discipline of Family Practice prepares the family physician for a unique role in patient management, problem solving, counseling and as a personal physician who coordinates total health care delivery."

Facts About the Examination

Examination Description

The American Board of Family Practice certification examination is a written test of cognitive knowledge and problem-solving abilities relevant to Family Practice. Appropriate elements of the following disciplines are covered: Community Medicine, Internal Medicine, Obstetrics and Gynecology, Pediatrics, Psychiatry and Surgery. Subject areas include but are not limited to diagnosis, management and prevention of each question.

The examination is composed of:

1. Objectively-scored multiple choice questions including, where appropriate, pictorial material such as line drawings, roentgenograms, and
2. Patient management problems (based on clinical case histories).

Applying for the Family Practice Certification Examination

An application must be submitted with a check or money order in the amount of \$350.00 U.S. Dollars (\$50 application fee and \$300 examination fee), payable to the AMERICAN BOARD OF FAMILY PRACTICE and postmarked no later than THE PUBLISHED DEADLINE. Send your completed application form to:

Changes in Policies and Procedures

This document supersedes all previous publications of the Board regarding policies and procedures.

The Board reserves the right to make changes in its fees, policies, and procedures at any time and cannot assume responsibility for giving advance notice thereof. The provisions of this publication are not to be construed as a contract between any candidate and the American Board of Internal Medicine.

The version submitted on May 6, 1980 for publication dates will undergo certain significant revisions by ABIM in June 1980. The corrected edition will be available from the Board in July 1980.

Areas of Certification Offered

The Specialty of Internal Medicine

Certification as a Diplomate in the specialty of internal medicine signifies that a candidate has completed a minimum of three years of postdoctoral education in general internal medicine, demonstrated competence in the clinical evalua-

tion of patients, and passed the Certifying Examination in internal medicine. Physicians awarded this Diplomate certificate will have demonstrated that they have prepared themselves for the practice of internal medicine.

A Subspecialty of Internal Medicine

A second certificate in a subspecialty of internal medicine is offered to a Board Diplomate in internal medicine having additional competence. Candidates beginning their residency training in internal medicine (not straight medicine internship) after May 1970 must complete a minimum of two years of postdoctoral education in the subspecialty before undertaking a subspecialty examination. Examinations are offered in the following subspecialties:

- | | |
|----------------------------|--------------------|
| Cardiovascular Disease | Infectious Disease |
| Endocrinology & Metabolism | Medical Oncology |
| Gastroenterology | Nephrology |
| Hematology | Pulmonary Disease |
| | Rheumatology |

Recertification in the Specialty of Internal Medicine

Diplomates of the Board in the specialty of internal medicine are periodically offered the opportunity to undertake a Recertification Examination. Those who pass this examination will be given a new certificate dated the year of the examination.

General Qualification for Certification by the American Board of Internal Medicine

All candidates must evidence satisfactory moral and ethical standing in the medical profession.

All candidates are admitted to examinations at the discretion of the Board.

Certification in the Specialty of Internal Medicine Prerequisites

1. Undergraduate Medical Education

Candidates from schools in the United States or Canada must have graduated from a medical school accredited at the date of graduation by the Liaison Committee on Medical Education, the American Medical Association, or the Canadian Medical Association or from a college of osteopathic medicine approved by the American Osteopathic Association.

Graduates of foreign medical schools who are not licensed to practice in a state, territory, province or possession of the United States or Canada, or who have not passed the examinations (Parts I, II, and III) of the National Board of Medical Examiners, must have a permanent certificate of the Educational Council for Foreign Medical Graduates. A photostatic copy of this certificate must accompany the application for admission to examination. Alternatively, candidates who have completed undergraduate premedical work in an accredited American college or university must document to the Board that they entered graduate medical training in the United States via the "Fifth Pathway" as proposed by the American Medical Association.

2. Postdoctoral Training Requirements

Candidates must satisfactorily complete the training requirements outlined on the following pages. Requirements for graduates of foreign medical schools are the same as those for other candidates.

3. Application for Examination

A physician who meets the educational requirements in internal medicine must follow the procedures described on the following pages to apply for admission to the Certifying Examination.

4. Substantiation of Competence in Clinical Skills by Appropriate Authorities

It is essential that the internist has the appropriate attitudes, interpersonal skills, psychomotor skills and intellectual abili-

Internal Medicine

ties to gather data through an organized, complete and critical medical interview, a thorough physical examination and appropriate use of diagnostic studies, to make logical diagnoses and to prescribe optimal medical care. Directors of training programs can most appropriately provide the Board with the necessary documentation of some of these clinical skills and have established committees to assist them in the evaluation. The evaluation should be a continuing process extending throughout a trainee's tenure in a hospital's program. The Board, after receipt of an application for examination, requires substantiation of competence in clinical skills from director(s) of the applicant's training program(s). The Board reviews the director's report before accepting the candidate for examination. For further information on this procedure for evaluating clinical skills, refer to *Annals of Internal Medicine*, 76:491-496 (March) 1972.

If the program director of the second or third required year of training in general internal medicine reports to the Board that a candidate's clinical skills are judged to be less than satisfactory, the candidate will be excluded from the next Certifying Examination at the discretion of the Board and may be required to undertake an additional year of training devoting special attention to the development of clinical skills. Candidates may appeal exclusion by requesting a Special Evaluation of their clinical skills to be conducted by a member of the Board. During this evaluation the candidate will be observed interviewing and examining two patients. The candidate will then be asked to provide a brief presentation of differential diagnoses based on the information obtained. Candidates whose skills are judged satisfactory by this procedure will be admitted to examination. *Only one Special Evaluation is permitted.* Training program directors will be advised of the need for and results of Special Evaluations.

For candidates at least two years beyond training, substantiation that the physician is currently recognized as a specialist in internal medicine will be sought from the chief of the medical service where the candidate's principal staff appointment is held. Such substantiation will take into consideration the candidate's continuing clinical competence and his or her standing in the medical profession.

5. Substantiation of Moral and Ethical Standing

When recommending physicians for ABIM examinations, the program director or the chief of medical service has the responsibility to assure the Board that the candidate has satisfactory moral and ethical standing in the medical profession. The candidate must be qualified to receive a hospital certificate indicating successful completion of a training program.

Deficiencies in moral and ethical behavior relating to medical care should be identified by the program director as early in the training period as possible so that remedial action can occur. A candidate with persisting deficiencies who is judged to have unsatisfactory moral and ethical behavior should be offered the opportunity to meet with the local Committee on Evaluation of Clinical Competence in order to reply to the charges.

When the program director cannot recommend a candidate for admission to the Certifying Examination on the basis of documented deficiencies, he or she should indicate this judgment on the ABIM evaluation form with full documentation, including critical incidents which illustrate adverse behavior. If the Board accepts this judgment by denying admission to its examination and if the candidate wishes to appeal the decision, a mechanism will be provided where after notice of the nature and particulars of the alleged deficiencies both the candidate and program director will be requested to appear before the Board to present their respective positions.

6. The Certifying Examination in Internal Medicine

The Certifying Examination in internal medicine is a written examination. The questions are objective and designed to test the candidate's knowledge, clinical judgment, problem-solving skills, and, to an appropriate degree, knowledge of the sciences fundamental to internal medicine. The Certifying

Examination consists of four sessions occupying two consecutive days. It is given annually in many centers throughout the United States, in Canada, and in a few centers outside the continental limits of the United States. The date of the next examination is indicated on following pages. A candidate who passes this examination will be certified as a Diplomate in the specialty of internal medicine as of the date of completion of that examination.

Training Requirements Definition of Terms

To clarify the presentation of the training requirements which follows, the following terms are defined:

1. *Meaningful patient responsibility* is defined as direct and comprehensive care of patients. This includes responsibility for record-keeping and management under the supervision of faculty and/or personal physicians. Such care may occur in any of the following:

- (a) inpatient services where patients are unselected as to diagnosis,
- (b) inpatient services where disorders of one subspecialty are managed, or
- (c) the emergency room, intensive care units, general medical or subspecialty outpatient clinics.

Care provided in the capacity of a consultant does not fulfill this definition of meaningful patient responsibility.

2. *Approved* indicates accreditation by a Residency Review Committee of the Council on Medical Education of the American Medical Association, or the Liaison Committee for Graduate Medical Education, or Canadian training completed in Canada and accredited by the Royal College of Physicians and Surgeons of Canada or by the Professional Corporation of Physicians of Quebec.

3. *A straight medicine internship* (categorical first year of internal medicine) is a first postdoctoral year of training approved as such.

Also acceptable is an internship before June 1975 which was undertaken in a hospital with an approved training program in internal medicine and which included a minimum of eight months of internal medicine or, alternatively, six months of internal medicine and two months devoted to pediatrics and/or emergency room care. The "categorical* first year" since May 1975 under the direction of a hospital's department of medicine is equivalent.

Candidates who have had rotating internships in institutions with approved training programs in internal medicine can receive credit on a month-for-month basis for rotations under the supervision of the director of an accredited internal medicine program and up to two months credit for rotations in approved pediatrics programs or emergency rooms (total allowed for pediatrics and/or emergency room is two months).

4. *A residency in internal medicine* is postgraduate training approved as such.

No internship, residency or fellowship training taken before the date of completion of the requirements for the M.D. or D.O. degree may be credited against the Board's training requirements.

General Requirements

The Board has always recommended that candidates receive three years of training in the broad field of internal medicine regardless of whether they plan to practice general internal medicine or a subspecialty. In order to assure that all Diplomates of the Board are competent to fulfill the responsibility of an internist for the primary care of patients, *the Board requires three years of accredited training in the broad field of internal medicine for all candidates who began their first year of postdoctoral training in June 1977 and after.*

The following requirements provide the minimum postdoctoral educational background which will enable a medical graduate to apply for admission to the examination of the Board. All physicians planning to apply for certification are urged to discuss the details of their training with their program directors.

Current Requirements

The three years of required training outlined under Plan 1 and Plan 1-A must satisfy *all* the following conditions:

1. A director of an approved training program in internal medicine must have responsibility for the educational process during all thirty-six months of training. Of the thirty-six months of required training, a maximum of six months in specialties other than internal medicine, but within an accredited residency in internal medicine, may be credited toward the thirty-six months of required training. These six months permit a program director to introduce appropriate training for primary care. These rotations may be dispersed throughout the required thirty-six months of training.
2. *During the thirty-six months of training, a candidate must complete a minimum of twenty-four months of internal medicine with meaningful patient responsibility.* At the discretion of the director of the training program in internal medicine, up to four months of these twenty-four months may be spent in other specialties related to medicine, (for example, dermatology, pediatrics, psychiatry) provided that they also involve meaningful patient responsibility.
The following count toward the twenty-four month requirement for meaningful patient responsibility:
Twelve months spent during an approved straight medicine internship or an approved categorical or categorical* first year of internal medicine
The exact number of months spent in internal medicine during another type of approved internship
The exact number of months in an approved medicine residency during which the trainee assumed meaningful patient responsibility.
The exact number of full-time equivalent months in a fellowship during which the trainee assumed meaningful patient responsibility
3. Responsibility for patient care must increase each year.
4. To be admitted to a Certifying Examination in internal medicine in a given year, a physician should have completed three years of approved postdoctoral education as outlined under Plan 1 and under Plan 1-A before July 1 of that year.

Plan 1

- Year 1 — An approved internship which meets the requirements of a *straight medicine internship* as defined on the following pages
or
One year of *approved residency* in general internal medicine as defined on the following pages
- Year 2 — A year of *approved residency* in general internal medicine
- Year 3 — A year of *approved residency* in general internal medicine

Special Requirements Which May Apply to Candidates Beginning Postdoctoral Training Between July 1970 and June 1977

For candidates beginning postdoctoral training before June 1977, the Board will continue to admit to the Certifying Examination the few outstanding candidates who are judged by their program directors to have developed sufficient competence in the broad field of internal medicine to undertake the examination after devoting the temporarily acceptable minimum period of two of the three required years of training to general internal medicine. (Such candidates must have had meaningful patient responsibility during twenty-four months of their training.) Authorization must be obtained from the director of their second year of training in general internal medicine *before* devoting the third year of required education to a field other than general internal medicine. The Board expects that the program director, before granting authorization, will assure that it is the intention of the candidate to devote *two years* to training in the medical subspecialty. The

Board will request from the program director documentation of the required authorization during the process of evaluating the candidate's application for the Certifying Examination.

Plan 1-A

(Not available to candidates beginning postdoctoral training in June 1977 and after.)

Year 1 — An approved internship which meets the requirements of a *straight medical internship* as defined on the following pages

or

One year of *approved residency* in general internal medicine as defined on the following pages

Year 2 — A year of *approved residency* in general internal medicine, preferably in the same institution as Year 1

Year 3 — One year of the following training can fulfill the requirements for the third year of internal medicine if conducted under acceptable auspices such as an approved residency program in internal medicine and provided that the director of a candidate's second year of training in internal medicine authorizes the candidate to undertake examination after completing only twenty-four months of general internal medicine within the required thirty-six months:

1. The first of two intended years of fellowship or residency in one of the subspecialties in which the Board or its related Conjoint Boards examine, or
2. in exceptional instances and with the approval of the Board, training in fields other than internal medicine.

Training Requirements Which May Apply to Candidates Beginning Their Residency Training Before June 1970

Candidates who entered their first year of residency training in internal medicine (not straight medicine internship) prior to June 1, 1970, and who met the training requirements for the Certifying Examination in internal medicine under previous Plans A1, A2, A3 (all of which involved a minimum of four years of postdoctoral education), Plans B1 and C, and Plans 1 and 2 may apply for admission to the Certifying Examination.

Candidates who passed a written examination in general internal medicine in years preceding the Certifying Examination of June 1972 and who did not subsequently pass an oral examination may apply for admission to the Certifying Examination and will be awarded the related Diplomate certificate if successful.

Alternate Pathways

The Board has the authority to admit to the Certifying Examination candidates with unusual training who are otherwise qualified.

Training Taken in Accredited Programs Other Than Internal Medicine

Physicians transferring from such programs *may* be permitted to allocate a portion of this training against the required 36 months, providing the training was served under the supervision of an approved associate program in internal medicine or is considered by the program director *and the Board* to be equivalent to training in an internal medicine program. The Board Requires that at least 30 months be spent training in internal medicine in accredited residencies in internal medicine and that at least 30 months be under the direct supervision and responsibility of the training program director(s) of accredited residencies in internal medicine.

Candidates for Special Consideration Plan C

Candidates must be a full-time member of the faculty of an accredited medical school in the United States or Canada and must be proposed by the chairperson of the department of

Internal Medicine

medicine of that school. *Candidates may not initiate an application for examination under Plan C.* Such candidates should have the abilities and stature to qualify for admission to the examination even though their programs have been unusual. A candidate's curriculum vitae and bibliography must be transmitted with the proposal which will be considered by the Executive Committee of the Board. Appropriate candidates will be sent application forms, and the proposer will receive an evaluation form and be requested to record the report of the hospital's Committee on Evaluation of Clinical Competence.

Other Candidates

The Board recognizes that other outstanding and exceptional potential candidates have unusual educational or training experiences. It has established procedures to evaluate the eligibility of such persons for admission to the Certifying Examination. *Candidates may not initiate such an application for examination.* Inquiries on their behalf may be transmitted with their curricula vitae and bibliographies to the Board by directors of approved training programs in internal medicine in the United States and Canada. Appropriate candidates will be sent application forms, and the proposer will receive an evaluation form and be requested to record the report of the hospital's Committee on Evaluation of Clinical Competence.

Procedures for Application and Examination

Candidates who will have completed the prescribed training by July 1 of a given year are eligible to apply for admission to the Certifying Examination given that year. Candidates for examination must make their application on the prescribed form, which may be obtained by written request from the Board's office. Those contemplating admission under plans for candidates for special consideration must arrange a proposal from the departmental chairman of an approved medical school or the director of an approved training program (see paragraph above) before submitting an application form.

The next examination in general internal medicine will be held September 9-10, 1980. Application forms may be requested beginning December 1, 1979. Those whose commitments at the time of the examination are uncertain should refer to the section on Caricellations. *The closing date for receipt in the Board's office of the completed application form for either an initial or a repeat examination is March 1, 1980.*

The application form must be accompanied by two recent, signed photographs of the candidate and by the fee. Most of the registration and examination fee will be refunded if the application is disapproved; the balance defrays the cost of evaluating the application.

Candidates may indicate their preferences for examination centers from a list included with the application form.

Candidates will be informed of the results of the examination approximately four months after its administration.

Certification in a Subspecialty of Internal Medicine**Prerequisites****1. Prior Certification in Internal Medicine**

A candidate for examination in a subspecialty must be certified as a Diplomate in the specialty of internal medicine, or have been successful on (but not certified by) the Qualifying (*written*) Examination of 1969 or 1970, or as a Fellow in *internal medicine* by the Royal College of Physicians and Surgeons of Canada or by the Professional Corporation of Physicians of Quebec. Such certification in Canada is not acceptable as qualification if a candidate has entered the Board's evaluation process in internal medicine and has not been successful in passing a Certifying Examination or has not been admitted to a Certifying Examination because of unauthorized "short track," clinical incompetence, or lack of substantiation that he or she is recognized as a specialist in the community.

2. Training Requirements

Candidates must satisfactorily complete the training requirements outlined on the following pages

3. Application for Examination

A physician who meets the two requirements stipulated above must follow the procedures described on the following pages to make application for examination in a subspecialty area.

4. Substantiation of Clinical Competence and Recognition as a Subspecialist

Substantiation of the candidate's overall clinical competence will be requested from the director(s) of the subspecialty training program(s) and the associated residency(ies) in internal medicine. If a candidate's skills as a subspecialist-consultant are reported as less than satisfactory, the candidate may be excluded from the subspecialty examination for which application was made. An excluded candidate may appeal the decision by requesting a Special Evaluation of clinical skills conducted by a member of the Board. During this evaluation the candidate will be observed interviewing and examining two patients. The standards applied will be those expected of a competent clinical consultant in the subspecialty. Candidates whose skills are judged to be satisfactory by this procedure will be admitted to a subsequent examination. *Only one Special Evaluation will be permitted.* Training program directors will be advised of the need for and results of Special Evaluations.

The Board will also request substantiation from the institution(s) at which the candidate has a staff appointment that the candidate is recognized as a specialist in good standing in the appropriate subspecialty.

5. Substantiation of Moral and Ethical Standing (see "Certification in the Specialty of Internal Medicine")**6. Subspecialty Examination**

Examinations in the subspecialties are administered in alternate years in the United States and Canada. The dates of the next subspecialty examinations which will be offered are indicated on following pages. An outline of the general subject areas covered in each examination will be provided with the application form. The examinations are objective and occupy one day with the exception of the examination in Cardiovascular Disease, which lasts one and one-half days. A candidate who passes an examination will be certified as a Diplomate in the particular subspecialty as of the date of that examination.

Training Requirements**Current Requirements**

The Board requires two years of full-time graduate education in a subspecialty, completed in a program associated with an approved residency in internal medicine. A period of clinical training in another institution may be acceptable; however, the institution must have a recognized reputation for an advanced educational program in the subspecialty and provide this experience in an academic atmosphere. A detailed description of the curriculum of the training program in such institutions must be submitted. Training undertaken in a subspecialty while the candidate holds a full-time junior faculty appointment in a medical school in the United States or Canada is applicable against the requirements.

Subspecialty rotations completed during a candidate's training in general internal medicine *cannot* be credited towards the required subspecialty training.

Special Requirements Which May Apply to Candidates Beginning Their Residency Training Before June 1970

Special attention is drawn to a change in Board policy. Physicians certified in internal medicine who began residency training in internal medicine before June 1970 may apply for

a subspecialty examination in hematology, infectious disease, nephrology, pulmonary disease or rheumatology having completed only one year of acceptable full-time subspecialty training *only through the 1980 examinations*. Once admitted to a subspecialty examination, such physicians will continue to meet the training requirements for the subspecialty examination after 1980; however, all physicians not previously admitted to a subspecialty examination will be required to meet current requirements.

The two-year training requirement holds for those physicians, desiring examination in a subspecialty, who are certified in internal medicine by the Royal College of Physicians and Surgeons of Canada or those who passed the Qualifying Examination in internal medicine in 1969 or 1970 but did not pass an oral examination in internal medicine. A physician who passed the Qualifying Examination and who has completed two years of the appropriate training in a subspecialty (including allergy and immunology and nuclear medicine) may apply for examination in that subspecialty. Physicians who pass the subspecialty examination will be certified in both the subspecialty and internal medicine. A candidate in this category will be admitted to examination regardless of the number of oral examinations in internal medicine undertaken. Alternatively, the candidate may undertake and pass a Certifying Examination to achieve certification in general internal medicine.

Candidates for Special Consideration

The Board has the authority to admit to a subspecialty examination candidates certified in internal medicine who have had unusual training in a subspecialty.

Plan S

A candidate who is a *full-time faculty member* of a medical school in the United States or Canada and has had less than the required approved training in a subspecialty may be proposed under Plan S. *The candidate may not initiate an application for examination under Plan S.* A proposal must be directed to the Board in writing by the chairman of the department of medicine of an approved medical school in the United States or Canada. Such candidates must have been previously certified in internal medicine by the American Board of Internal Medicine or have passed the Board's Qualifying Examination of 1969 or 1970.

The chairman proposing the candidate must verify the clinical competence of the nominee. The proposal should include a description of the candidate's training and experience in the subspecialty area, a complete curriculum vitae and a bibliography. Each proposal will be reviewed by the Executive Committee of the Board, and application forms will be sent to appropriate candidates.

Certification in Two Subspecialties

While not wishing to encourage certification in more than one subspecialty, the Board has established training requirements for candidates desiring admission to two subspecialty examinations. Requirements for dual certification in hematology and medical oncology have been published and are available from the Board. Candidates desiring dual certification in other combinations should direct written inquiries detailing their training to the Board for evaluation by the appropriate committee.

For candidates who undertook their first year of subspecialty training during the academic year 1974-1975 or after, the minimum training required for dual certification is three years divided between the two subspecialties with at least one year of clinical training in each. Candidates must meet the two-year training requirement before admission to their initial subspecialty examination. After 1977 candidates can apply for a second subspecialty examination only if they have been certified in their initial subspecialty or if they have met the full training requirements for the second subspecialty independent of training that permitted admission to the initial subspecialty examination.

Procedures for Application and Examination

Candidates who are certified in internal medicine before January 1 of a given year and who will have completed the prescribed training before July 1 are eligible to undertake an examination in a subspecialty given in June of that year. Candidates for examination must make their application on the prescribed form, which may be obtained from the Board's office during the registration period. Those contemplating eligibility under Plan S must arrange a proposal from the departmental chairman of an approved medical school before submitting an application form. Those qualifying by prior certification in internal medicine in Canada must provide copies of their certificates.

Examinations in each subspecialty are offered in alternate years according to the schedule presented on the following pages. Application forms for a written examination to be given in June will be available beginning August 1 of the preceding year. *The closing date for receipt in the Board's office of the completed application form for either an initial or a repeat examination is November 1 of the preceding year.*

Candidates who will have met the training requirements for a June Subspecialty Examination and have undertaken the September Certifying Examination in General Internal Medicine in the preceding year may register for the subspecialty examination pending the results of the Certifying Examination. If unsuccessful on the Certifying Examination, the candidate's subspecialty application will be cancelled and the fee for that examination will be refunded in full.

The application form must be accompanied by two recent, signed photographs of the candidate and by the fee. Most of the registration and examination fee will be refunded if the application is disapproved (this does not apply to doubly registered candidates who failed the Certifying Examination in internal medicine); the balance defrays the cost of evaluating the application.

Candidates may indicate their preferences for examination center from a list included with the application form.

Candidates will be informed of the results of the subspecialty examination approximately three months after its administration.

Recertification in Internal Medicine

The purpose of the Recertification Examination is to provide the practicing certified internist an opportunity to evaluate objectively his or her current clinical knowledge, continuing education, and problem solving abilities that relate to the provision of excellent care in internal medicine. Diplomates of the Board who were certified or recertified in the specialty of internal medicine six or more years previously may apply for the Recertification Examination. A physician who passes the Recertification Examination will receive a certificate with the date of the examination. The next Recertification Examination in internal medicine will be offered on October 25, 1980. Applications will be available upon request during the registration period November 1, 1979 through June 1, 1980. The fee for the examination is \$175.00.

Miscellaneous Information

Sequence of Procedures Relating to Admission to the Certifying or a Subspecialty Examination

Following review of an applicant's training as presented on the application form, the candidate who is making a *first* application is informed by letter that the initial stage of processing the application has been completed. The Board then solicits reports from those who trained the candidate and/or those who are familiar with the candidate's performance in training and/or in practice. If these reports are satisfactory, the applicant is informed of admission and the location of examination approximately three weeks before the examination date.

Neurological Surgery**Additional Information Regarding Training Requirements****Education Received While Fulfilling Required Military Service**

Candidates may fulfill the educational requirements for both the Certifying and the Subspecialty Examinations on the basis of training which is acceptable to the Board as specified above and which simultaneously has fulfilled the candidate's requirements for obligated military service.

Requirements for Examination by Both the American Board of Pediatrics and the American Board of Internal Medicine

In 1967 these two Boards agreed that candidates otherwise eligible for examination and subsequent certification by each Board may be admitted to the examinations of both Boards, after such candidates complete at least two years of approved postdoctoral training involving graded responsibility in each specialty.

Cancellations

Candidates who cancel their application for any of the examinations of the Board before the deadline for cancellation will receive a refund of \$250.00 for the Certifying Examination in internal medicine, \$325.00 for a Subspecialty Examination, and \$125.00 for the Recertification Examination.

Reexamination

1. Candidates who are unsuccessful on a Certifying Examination in internal medicine or a Subspecialty Examination are not restricted as to the number of opportunities for reexamination and may apply for reexamination in any year.
2. Candidates requesting reexamination whose credentials have not been reviewed during the previous three years are required to designate on the application form the hospital in which they hold their principal staff appointment. The Board will, during the registration procedure, obtain from the chief of medicine of that hospital substantiation of the appointment and good standing of the candidate.
3. For each reexamination the current fee is charged.

Certification in Areas Related to Internal Medicine Offered By Conjoint Examining Boards

The American Board of Internal Medicine has joined with other specialty boards in sponsoring the examining bodies listed below. Physicians certified in internal medicine who are interested in certification in the indicated areas should make inquiry to:

The American Board of Allergy and Immunology
(A Conjoint Board of the American Boards of Internal Medicine and Pediatrics)
3624 Chestnut Street
Philadelphia, Pennsylvania 19104

The American Board of Nuclear Medicine
(A Conjoint Board of the American Boards of Internal Medicine, Pathology, and Radiology)
475 Park Avenue, South
New York, New York 10016

Irregular Behavior

All Board examinations are proctored. Any irregular behavior (such as giving or obtaining unauthorized information or aid) by a candidate, evidenced by observation, statistical analysis of answer sheets or otherwise, will constitute grounds for invalidation of that candidate's examination.

Journals Publishing Information on Application and Examination Schedules

Annals of Internal Medicine (Medical News Section)
Resident and Staff Physician
Forum on Medicine of the American College of Physicians
The Internist

The Journal of the American Medical Association (Examinations and Licensure Monthly Section)
Appropriate subspecialty journals

Inquiries

The Board staff is ready to discuss matters regarding certification with candidates. Candidates desiring an interview should request an appointment.

Please address all inquiries to:
American Board of Internal Medicine
3642 Market Street
Philadelphia, Pennsylvania 19104
(215) 243-1500

Summary of Registration Data

1981 Certifying Examination in Internal Medicine
Registration Period: November 3, 1980-February 2, 1981
Examination Date: September 15-16, 1981
Fee: \$300.00
Deadline for Cancellation: August 3, 1981
Refund: \$250.00
Admission Card Transmittal: Three weeks preceding examination

Subspecialty Examinations
Registration Period for 1981 examinations: January 2, 1981-April 3, 1981
Examination Dates:
November 10, 1981
November 9, 1982
Cardiovascular Disease
Hematology
Endocrinology and Metabolism
Infectious Disease
Nephrology
Gastroenterology
Pulmonary Disease
Medical Oncology
Rheumatology
Fee: \$375.00
Deadline for Cancellation: October 1, 1981
Refund: \$325.00
Admission Card Transmittal: Three weeks preceding examination

1980 Recertification Examination in Internal Medicine
Examination Date: October 25, 1980
Deadline for Cancellation: September 26, 1980
Refund: \$125.00
Admission Card Transmittal: Three weeks preceding examination

Please address all inquiries to:

American Board of Internal Medicine
3624 Market Street
Philadelphia, Pennsylvania 19104
(215) 243-1500

AMERICAN BOARD OF NEUROLOGICAL SURGERY

Robert B. King, Chairman, Syracuse, New York
W. Eugene Stern, Vice-Chairman, Los Angeles
Charles E. Brackett, Kansas City, Kansas
William F. Collins, Jr., New Haven, Connecticut
Charles A. Fager, Boston, Massachusetts
Griffith R. Harsh III, Birmingham, Alabama
Robert L. McLaurin, Cincinnati, Ohio
Ross H. Miller, Rochester, Minnesota
Russel H. Patterson, Jr., New York City
Byron C. Pevehouse, San Francisco, California
James T. Robertson, Memphis, Tennessee
David G. Kline, Secretary-Treasurer,
Louisiana State University Medical Center,
1542 Tulane Avenue, New Orleans, Louisiana 70112

Diplomates

A list of Diplomates and By-laws of The American Board of Neurological Surgery appear in the DIRECTORY OF MEDICAL SPECIALISTS which can be obtained from Marquis Who's Who, Inc., 200 East Ohio Street, Chicago, Illinois.

60611. In addition, a list of new Diplomates is published in the JOURNAL OF NEUROSURGERY shortly after each examination.

Information regarding training programs acceptable for certification can be found in the DIRECTORY OF RESIDENCY TRAINING PROGRAMS which is issued annually under the supervision of the Liaison Committee on Graduate Medical Education. This Directory can be secured from the American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610.

Qualifications

The American Board of Neurological Surgery evaluates all qualified applicants for their proficiency in Neurological Surgery.

The minimal educational requirements of the Board should not be interpreted as restricting programs to these minimum standards. If necessary, Neurosurgical Program Directors may retain residents in their program beyond the required five (5) years of neurosurgical training in order to insure satisfactory competence in Neurological Surgery.

It should be stressed that it is the responsibility of the candidate to seek information concerning the current requirements for certification by The American Board of Neurological Surgery. Even though Program Directors of approved programs in Neurological Surgery are well informed regarding the requirements for certification, placement in an approved training program does not guarantee adequate training for certification and the candidate must make sure he or she receives such training.

Training Prior to Neurosurgery Residency

1. Graduation from a medical school in the United States or Canada which is acceptable to the Board and is accredited by the Liaison Committee on Medical Education. Graduates from medical schools in countries other than the United States or Canada are eligible for certification providing they have a currently valid license to practice medicine in the state, province, or country of residence.

2. Graduates from U.S. or Canadian medical schools must also have a currently valid license to practice medicine in the state, province, or country of residence.

3. Twelve (12) months must be devoted to acquiring adequate clinical knowledge of fundamental clinical skills. This is known as postgraduate year one (PGY 1), general surgery year one, or internship. This may be achieved by:

- A. an integrated part of training in Neurological Surgery through a combination of clinical rotations as determined by the neurosurgical Program Director and carried out in hospitals and/or institutions in the United States or Canada recognized by the LCGME.
- B. not less than six (6) months of this year must be spent in general surgery or specialty surgical disciplines. Beginning on 1 July 1979, The PGY-1 year resident may take up to six (6) weeks of his or her training in neurosurgery and/or neurology during this year.
- C. or training of one year's duration in an approved program in general surgery in the United States or Canada.
- D. or by holding a certificate from the American Board of Surgery, Fellowship of the Royal College of Surgeons of England, Edinburgh, Canada, Ireland, or Australia.
- E. surgical training taken in programs outside of the United States or Canada by individuals without a Fellowship of one of the Royal Colleges must have been in a program approved by the American Board of Neurological Surgery prior to the resident's taking such training in that program.
- F. up to, but not beyond, 1 July 1979, an individual in his final year of medical school could enter directly into a five (5) year training program in neurosurgery without having to take a year of general surgery. In order to meet this stipulation, the individual's senior year in medical school must have been spent on surgical rotations which were the equivalent of one year of graduate training in surgery and were acceptable as such in the

judgment of the Chairman of the Department of Surgery in the individual's medical school. The Chairman of the Department of Surgery should notify the American Board of Neurological Surgery to this effect.

Neurological Surgery Training Requirements

For Residents Who Began the Neurological Surgery Portion of Their Training Before 1 July 1979

1. Completion of four (4) years of training following postgraduate year one. The Neurological Surgery training must occur in hospitals or institutions recognized by the American Board of Neurological Surgery and acceptable to it.

2. Of this training period, at least thirty (30) months must be devoted to clinical Neurological Surgery. Twelve (12) of the thirty months should be spent as Chief Resident in one institution. The other remaining eighteen (18) months may be devoted to some aspect of the neurosciences.

3. The training in clinical Neurological Surgery must be progressive but not obtained during repeated short periods in a number of institutions. It is necessary that at least 24 months of this training in clinical Neurological Surgery be obtained in one institution. The American Board of Neurological Surgery will not ordinarily approve training in any hospital or Graduate School of Medicine for periods of less than six (6) months. Exchange of residents between approved neurosurgical training centers in the United States and Canada for periods of more than six (6) months may be arranged by the respective training Program Directors with the resident's consent. In such instances, the Secretary of the Board should be notified of this change in program before the exchange period begins. Such an exchange should in no way compromise any other training requirements.

4. The Program Director must notify the Secretary of the ABNS of the appointment of each new neurosurgical resident and whether or not they are entering the program with intent to obtain certification and if so, whether or not the Director has informed the trainee of the requirements necessary to obtain such certification.

5. Prior to acceptance for the certification process by the Board, the Board requires a statement from the candidate's Program Director to the effect that the candidate has met the minimum time requirements and that his or her performance in training has been satisfactory and that in the judgment of the Program Director, the trainee is well prepared to enter into the independent practice of neurosurgery.

For Residents Beginning the Neurological Surgery Portion of Their Training on or After 1 July 1979

1. At least sixty (60) months of neurosurgical training is necessary. This training must occur in hospitals or institutions recognized by the American Board of Neurological Surgery, approved by the RRC in Neurosurgery, and accredited by the LCGME.

2. The sixty (60) months of training must include at least 36 months of clinical Neurosurgery and twelve (12) months of this period should be served as a Chief Resident in one institution.

3. At least twenty-four (24) months in clinical neurosurgery must be obtained in one institution. The training in clinical neurosurgery must be progressive and not obtained during repeated short intervals in a number of institutions.

4. At least three (3) months of the sixty (60) should be devoted to training in neurology. Six (6) months is recommended.

5. The unobligated twenty-one (21) months, of the minimum required total time of sixty (60) months, may be devoted to Neuropathology, Neuroradiology, Basic Neurosciences, research, or other disciplines related to Neurological Surgery. The Board does, however, recognize that the trainee and/or Program Director may wish the individual to have experience in other areas such as hand or plastic surgery, orthopedics or additional general surgery and such rotations

Neurological Surgery

will usually be approved by the Board providing we know about them ahead of time.

6. Training in any institution other than in the parent institution and its affiliated hospitals and institutions will not be considered as counting toward the requirements unless specified in advance by the Program Director and approved by the Board.

7. The Program Director must notify The American Board of Neurological Surgery of the appointment of each new neurosurgical resident and whether or not they are entering the program with intent to obtain certification and if so, whether or not the Director has informed the trainee of the requirements necessary to obtain such certification.

Certification of Those Trained in Canadian Programs

Those satisfactorily completing an approved Canadian training program are eligible for certification through the same route as American Candidates by:

1. Passing for Credit the Primary Examination.
2. Having training acceptable to The American Board of Neurological Surgery and having credentials for such training reviewed by the Credentials Committee and approved by the Board.
3. Keeping track of and presenting evidence of a satisfactory two (2) year period of practice.
4. Passing the Oral Examination.
5. Candidates who complete training in approved Canadian programs and who are also certified by the Royal College of Physicians and Surgeons (Canada) in Neurosurgery may apply to The American Board of Neurological Surgery for the Oral Examination and certification, but must complete the same training, examination, and practice requirements as graduates of accredited training programs in the United States.

Certification for Those Trained in the United States or Canada But Practice Neurological Surgery in a Foreign Country

Prior to 1 July 1972

Foreign Certificates can be issued to applicants who have received their Neurological Surgery training in the United States of America or Canada and who began their Neurological Surgery training prior to July 1, 1972. Such individuals must return to some country other than the United States of America or Canada in which they are legally licensed to practice medicine. Training for such a Foreign Certificate must meet the requirements of the Board. An applicant for a Foreign Certificate must file with the Secretary of the Board a sworn declaration of his or her intent to return to residence in some country other than the United States of America or Canada before he or she can be scheduled for the Oral Examination. A Foreign Certificate will only be issued upon return of the applicant to the foreign country which he or she has declared would be their country of residence. Foreign Certificates shall be valid only during residency of the recipient in a country other than the United States of America or Canada and shall be null and void and must be returned to the Secretary's office if the recipient becomes a resident of either the United States or Canada or return to either country to practice. If the holder of a Foreign Certificate becomes a resident or a practitioner in the United States or Canada and wishes certification, the Foreign Certificate must be surrendered and the Primary Examination passed. Then after two years of practice in Neurological Surgery in the United States or Canada, the individual may apply for the Oral Examination leading to a Regular Certificate.

On or After 1 July 1972

Individuals wishing to practice in countries other than the United States or Canada who initiated their Neurological Surgery training on or subsequent to July 1, 1972 and who completed their training in the United States or Canada and who wish to practice in a foreign country but be certified by

The American Board of Neurological Surgery must establish residence in that country and must practice for two years before they can be scheduled for the Oral Examination during training or during this period of practice, the individual must pass the Primary Examination for credit. The applicant may then apply to the Secretary's office for the Oral Examination for a Regular Certificate. Such a certificate shall be valid for Neurological Surgery practice should the individual return and take up residence in the United States or Canada. It will be necessary for such an individual to keep track of their practice and their results just as any other candidate for certification by the Board. Then, the individual must pass the Oral Examination in order to receive the Regular Certificate. If issued a Regular Certificate under these circumstances the Certificate shall be valid should the individual return and take up residence and/or practice in the United States of America or Canada.

Primary Written Examination

1. The Primary Examination for self-assessment is open to all trainees in Neurological Surgery training programs which are accredited by the LCGME and the American Board of Neurological Surgery, and the Royal College of Surgeons of Canada.

2. Any trainee in an accredited training program may take the Primary Examination for credit at a time to be determined at the discretion of the Program Director and the candidate.

3. The Primary Examination is also open to neurosurgeons who have successfully completed an accredited training program and may be taken for either credit or self-assessment.

4. The Primary Examination must be passed successfully at least six (6) months prior to sitting for the Oral Examination.

5. Candidates taking the Primary Examination in 1980 and thereafter, must also pass the section of the Examination dealing with Fundamental Clinical Skills in addition to receiving an overall passing grade in the entire examination.

6. The candidate may take this examination as often as desired for either self-assessment or credit.

7. Any candidate taking the Primary Examination is required to sign a pledge which states that he or she agrees to be bound by the Board's ruling regarding credentials irrespective of his or her score on the Primary Examination. By signing the pledge of either credit or self-assessment, the candidate grants permission to the ABNS and the National Board of Medical Examiners to release the examination results to the Program Director.

It should be kept in mind by the candidate that he or she must be scheduled for the Oral Examination by the Board within five (5) years of passing the Primary Examination for credit or within five (5) years of the completion of a formal training program, whichever occurs later. Compliance with this regulation requires early submission of the application for certification once the individual finishes his/her training program. In this regard, if the individual cannot be scheduled due to late submission of an application for certification and Oral Examination within the five (5) year limit, then, the individual must once again take and pass the written examination for credit and submit a new application for the Oral Examination and certification before being scheduled for the Oral Examination within the next five (5) years.

The candidate should, also, keep in mind that the Secretary's office usually requires an eighteen (18) month lead time between submission of an application and notification of scheduling of the candidate for the Oral Examination.

Practice Requirements

Following completion of graduate study, an additional period of not less than two (2) years of satisfactory practice of Neurological Surgery is required prior to examination. After one year of practice, the candidate shall furnish the Board either the names of or actual letters from individual physicians who are knowledgeable about the quality of the candidate's

practice. If only the name and address is provided, the Board will request reference letters from these physicians. It is also the prerogative of the Board to contact other physicians in the community and, at the Board's discretion, it may send representatives to review the candidate's practice.

In addition to the practice letters, again, after one year of practice, the candidate will submit either the names and addresses or actual letters from either the Medical Director or the Chief of Staff of each hospital where the candidate has hospital privileges. These letters are intended to advise the Board of the candidate's status regarding admitting and operating privileges in each hospital where he/she practices.

Upon request prior to the Oral Examination, the candidate shall forward to the Secretary's office a typewritten chronological list of all hospital patients for whom he or she has been the responsible physician or surgeon. The Practice Data Sheets and Summary of Practice Experience forms are to be prepared and ready for submission to the Secretary's office approximately three (3) months prior to the Oral Examination.

Practice experiences are to be inclusive of the two (2) years just prior to sitting for the examination. For example, if the candidate is to sit for the examination in the Fall of 1980, he will submit his patient information by June of 1980 and this data would include patient information extending from May of 1978 through May of 1980. Information may include but may not be limited to:

1. Identifying hospital number and date of admission
2. Clinical Diagnosis
3. Definitive diagnostic procedures, if performed
4. Operations, if performed
5. Result, including when applicable, all complications and autopsy findings
6. A summary form of the clinical material seen and surgical work performed by the applicant.

No minimum volume of diagnostic or operative procedures is required. The candidate should keep accurate records at all times so that material will be readily available. The total experience shall be tabulated by the candidate in a format defined by the Board. The case materials shall be accompanied by documents indicating the essential accuracy of the chronological list from the Record or Medical Librarian, Chief of Staff, Chief of Service, President of Medical Staff or Hospital Administrator of the hospitals where the candidate practices.

This list will be sent to the Secretary at a time set by the Secretary. In turn, the Secretary of the board will send the list to the members prior to the examination for their review.

Military Service Practice

Medical officers who have elected the military as a career may apply for certification on the same basis as physicians in civilian practice. The practice requirement may be met by hospital assignments in which their duties are limited to practice of Neurological Surgery. Credit for practice in a service setting by those who are not career officers, will usually consist of one year of practice time credit for each one (1) year of practice. Practice information for each individual in this category must still be reviewed by the Credentials Committee and the Board.

Applications

At the completion of residency training, the candidate should write to the Board requesting an application blank. Along with the application blank, the candidate will receive a Booklet of Information and a set of Practice Data Sheets for the recording of his or her patient practice. The application should be filled out and returned to this office as soon as possible after completion of training so that inquiries may be made from references provided as well as from others in the community, the individual's training program faculty, and the hospitals where the candidate practices.

1. Keep in mind that it takes eighteen (18) months or more lead time between submission of the application and scheduling of the Oral Examination for candidates so that in the usual case, the candidate will not sit for the Oral Examination

until 2½ to 3½ years after the completion of training. This time is necessary so that the two (2) years practice experience can be collected by the candidate and processed by the Board.

2. Candidates must apply soon enough after completion of training to be scheduled for the Oral Examination within five (5) years of passing the Primary Examination for credit or within five (5) years of completion of their formal training program, whichever occurs later.

3. If application is made beyond the five (5) year limit, the candidate must again pass the Primary Examination for credit and submit a new application along with a new fee before being scheduled for the Oral Examination within the next five (5) years.

4. A pledge is part of the application and the Oral Examination and by signing the application; the applicant agrees to abide by all of the terms and conditions of this pledge.

5. Upon receipt of the application, the Secretary's office shall take such steps as deemed appropriate to verify the statement of facts made in the application. Inquiries from references and others familiar with the candidate and his or her practice and hospital appointments to obtain information relevant to requirements for examination and certification are necessary.

6. Prior to Oral Examination, each candidate must be in possession of hospital staff privileges in all hospitals in which he or she cares for patients. Such privileges must be full privileges in respect to the hospital's requirements for a surgeon of his or her qualifications.

7. When a candidate's application has been approved by the Credentials Committee, the candidate will be informed that if he or she fails to stand for the Oral Examination within three (3) years of date of notification of acceptance for the scheduled examination, he or she will not, thereafter, be scheduled for Oral Examination except by filing a new application and a new fee with that application.

8. The Board will make the final decision regarding the candidate's eligibility for Oral Examination and potential certifiability after considering all available information pertaining to eligibility.

9. Applications must be typewritten.

10. Application fee once received will not be refunded or credited against a future application submission.

Oral Examination

The Oral Examination is given two or three times a year at one site in the United States. The format for this examination is a clinical problem solving and patient management test. It is conducted in an interview setting with two examiners for each of the three hours. The candidates are given case histories and where appropriate, x-rays, scans and other visual aids to augment the presentation and development of the case. The candidate must verbally be able to explain how he or she would proceed in further evaluating and/or managing the case and how one would plan and perform the proposed operation or operations if indicated. One hour is devoted to Neurological Surgery—intracranial disease; one hour to Neurological Surgery—spine and peripheral nerve disease; and one hour to Neurology.

If upon receipt of notification of scheduling for the Oral Examination, the candidate for some reason cannot stand for the examination, he must notify the Secretary's office immediately, since there is usually a waiting list for each examination. The examination fee will not be refunded except under exceptional circumstances deemed appropriate by the Board.

A candidate who receives a passing grade for the Oral Examination will be forwarded the Board's Certificate, once it is suitably engrossed and signed by the then current officers of the Board.

Re-examination Rules

If a candidate fails the examination once and wishes to repeat it, this must be requested by writing to the Secretary's office within a three year period.

Nuclear Medicine

A new application form need not be filled out, but a re-examination fee must be paid prior to examination. A minimum of one year must elapse before taking the exam for the second time.

A candidate who has failed the Oral Examination on two (2) occasions, must then pass the Primary Examination for credit again before becoming eligible to retake the Oral Examination. It is not necessary that a new application form be filed with the Secretary's office. However, it is necessary that two letters of reference certifying the nature and quality of the candidate's practice be submitted to this office. In addition, the candidate must pay the Oral Examination fee. Under these circumstances, candidates must apply to take the Oral Examination within eighteen (18) months of passing the Primary Examination and must actually take the examination within three (3) years of passing the Primary Examination. Should for any reason the candidate not apply for or fail to appear for or fail the Oral Examination within the three (3) year period, the candidate must retake and pass the Primary Examination once again before being eligible for re-examination.

Payment of Fees

The fee for both filing an application with the Board and the Oral Examination will be determined by the Board. This fee will be increased as deemed necessary by the Board in order to pay for the obligations associated with the certification process. The application fee will not be returned even though the application for examination is denied. When notified by the Secretary that the candidate is eligible for examination, the candidate shall send the examination fee in the amount current (in U.S. dollars) at that time and at least thirty (30) days prior to the examination.

A candidate who has failed the Oral Examination once is eligible for re-examination within three (3) years upon the payment of the re-examination fee. If the holder of a Foreign Certificate returns to or remains in the United States or Canada to practice and reappears before The American Board of Neurological Surgery after two (2) years of practice in the United States or Canada, the applicant shall pay the re-examination fee current at that time.

Revocation of Certificate

Pursuant to rules and regulations established by the ABNS, the Board will have the authority to revoke any certificate issued by the Corporation if: a) such certificate was issued contrary to or in violation of any rule or regulation of the Corporation b) the person to whom the certificate was issued was not eligible to receive or has since become ineligible to continue to hold such a certificate, c) the person to whom the certificate was issued made any misstatement of fact to the Board in his application or otherwise, d) person to whom the certificate was issued is convicted of a felony. Should revocation be disputed, there is a hearing mechanism for such an action.

AMERICAN BOARD OF NUCLEAR MEDICINE

(A. Conjoint Board of the American Board of Internal Medicine, the American Board of Pathology, and the American Board of Radiology and sponsored by the Society of Nuclear Medicine)

Mathews B. Fish, Chairman, Eugene, Oregon
 Gerald L. DeNardo, Vice Chairman, Sacramento, California
 Myron Pollycove, Treasurer, San Francisco, California
 William H. Blahd, Los Angeles, California
 Frederick J. Bonte, Dallas, Texas
 John A. Burdine, Jr., Houston, Texas
 Frank, H. DeLand, Lexington, Kentucky
 Robert M. Donati, St. Louis, Missouri
 Howard J. Dworkin, Royal Oak, Michigan
 B. Leonard Holman, Boston, Massachusetts
 Patricia McIntyre, Baltimore, Maryland
 Robert O'Mara, Rochester, New York
 Joseph F. Ross, Executive Director,
 900 Veteran Avenue, Los Angeles, California 90024

Definition of Specialty

Nuclear medicine is defined as that specialty of the practice of medicine dealing with the diagnostic, therapeutic (exclusive of sealed radiation sources), and investigative use of radionuclides.

Purposes of the Board

The primary purpose of the board, and therefore its most essential function, is the protection of the public interest through the establishment and maintenance of standards of training, education, and qualification of physicians rendering care in nuclear medicine to the people of the United States. The Board contributes to the improvement of health care in the United States and carries out this purpose by (a) establishing requirements of graduate training related to examinations given by the Board; (b) influencing the standards required of hospitals and institutions that provide such graduate training; (c) aiding in the assessment and accreditation of programs in hospitals and institutions providing graduate training; (d) assessing the credentials of candidates for the examinations of the Board; (e) conducting an examination process to determine the competence of candidates for certification and recertification by the Board; (f) granting and issuing certificates in nuclear medicine to voluntary applicants who have been found qualified by the Board; and (g) maintaining a registry of holders of such certificates, and serving the medical and lay public by preparing and furnishing lists of practitioners who have been certified by the Board.

Significance of Certification

A physician certified by the American Board of Nuclear Medicine has fulfilled its prerequisites for training, made application for and successfully completed a qualifying written examination encompassing the medical uses of radioactive materials and related physical sciences.

A Diplomate of this Board is capable of:

1. Assuming clinical responsibility for patients under his care.
2. Serving as consultant to other physicians and to advise them of the clinical indications and limitations and assessment of benefits versus risks of diagnostic and therapeutic applications of radioactive materials.
3. Conducting or supervising the performance of clinical procedures, involving the use of radioactive materials.
4. Rendering a valid written or verbal interpretation of the results of such procedures.

The certificate does not confer on any person legal qualifications, privileges, or license to practice medicine or the specialty of nuclear medicine. The Board does not purport to interfere with or limit the professional activities of any licensed physician.

Requirements for Certification

A. General Requirements for Each Candidate

Assurance that the applicant represents himself to be a specialist in nuclear medicine.

B. General Professional Education

Graduation from a medical school approved by the Liaison Committee on Medical Education or from a school of Osteopathy. If the applicant is a graduate of a medical school outside the United States or Canada, he must receive the approval of an agency designated by the Executive Committee.

C. Preparatory Post-Doctoral Training

Training required for admission to the certifying examination in nuclear medicine shall be comprised of two or more years of preparatory post-doctoral training, and two or more years of residency training in nuclear medicine.

Preparatory post-doctoral training shall consist of two or more years of residency training in programs satisfactory to the American Board of Nuclear Medicine. Such programs may, or may not, be within the fields of the sponsoring Boards but shall be ordinarily programs approved by the Liaison Committee on Graduate Medical Education (LCGME), the

Royal College of Physicians and Surgeons of Canada, or the Professional Corporation of Physicians of Quebec. The American Board of Nuclear Medicine believes that preparatory post-doctoral training should precede training in nuclear medicine. However, this preparatory post-doctoral training may be interspersed with the two years of nuclear medicine training.

Each nuclear medicine Residency Training Program Director must ensure that for each resident entering his program the preparatory post-doctoral training has been in a program approved by the Liaison Committee on Graduate Medical Education, the Royal College of Physicians and Surgeons of Canada, or the Professional Corporation of Physicians of Quebec.

D. Nuclear Medicine Training

1. After completion of the preparatory post-doctoral training programs, there shall be satisfactory completion of a two-year formal residency training program in nuclear medicine in a nuclear medicine residency training program recognized and approved by the Residency Review Committee for Nuclear Medicine and the Liaison Committee for Graduate Medical Education as competent to provide a satisfactory training in nuclear medicine. This period of special training shall be as the American Board of Nuclear Medicine shall determine from time to time.

2. The two-year formal residency training program in nuclear medicine must include:

- a. A minimum of eighteen months of training in clinical nuclear medicine, which will include, but not be limited to, radiobioassay, *in vitro* and *in vivo* measurements, nuclear imaging, and therapy with unsealed radionuclides.
- b. Training in allied sciences which must include: medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry, statistics, and computer sciences; and may also include pathology, physiology, electronics, and other basic sciences associated with nuclear medicine. The time spent in training in allied science may be spaced throughout the period of training in nuclear medicine and in a manner that does not exceed six complete months of training.
- c. For candidates who have completed residency programs in clinical disciplines closely related to nuclear medicine, a maximum of three months credit may be given for prior clinical rotations in nuclear medicine, provided that such training is in an approved program upon written request of the responsible nuclear medicine program director. Likewise, a maximum of three months related to nuclear medicine or training in ultrasound imaging and/or transmission computed tomography. Regardless of the amount of training in fields allied to nuclear medicine, however, each candidate must satisfactorily complete a minimum of eighteen months of clinical residence in an approved program in nuclear medicine.

3. The Board considers demonstration of clinical competence in the management of the nuclear medicine patient of paramount importance in its qualification of the applicant to take the certifying examination. The Board designates the Directors of Nuclear Medicine Residency Programs and their supporting Evaluation Committees as the authorities who most appropriately can provide to the Board the necessary documentation of competence in clinical nuclear medicine, and requires that all Program Directors provide the Board with evidence that each applicant from their programs is competent in clinical nuclear medicine. These reports will be reviewed by the Board before accepting an applicant to take the certifying examination.

If a Residency Program Director evaluates a candidate's competence in clinical nuclear medicine as unsatisfactory, the applicant will not be admitted to the examination unless the Board finds that the applicant's overall performance meets its standards. An applicant not admitted to an examination on

the basis of these findings may appeal in writing to the Board for a special evaluation of competence in clinical nuclear medicine within 30 days of receipt of notification, the appeal should include all necessary particulars. Applicants whose clinical competence is judged satisfactory in this evaluation will be admitted to the next examination for which they apply. Candidates judged not satisfactory in this evaluation are advised to spend an additional year in training before applying again for special evaluation of competence.

E. Patient Care Responsibility

Candidates for certification in nuclear medicine will have the equivalent of at least two years training in which the primary emphasis is on the patient and his clinical problems. This minimum period may be spaced throughout the entire post-doctoral training but should be of sufficient duration for the trainee to become knowledgeable in the aspects of clinical medicine relevant to nuclear medicine, including patient care.

F. Canadian Training

Physicians who satisfactorily complete training in nuclear medicine programs approved by the Royal College of Physicians and Surgeons of Canada or the Professional Corporation of Physicians of Quebec are eligible for admission to the ABNM certifying examinations.

Approved Residency Training Programs

Lists of approved residency training programs in nuclear medicine may be found in the *Directory of Residency Training Programs*, published annually by the Liaison Committee on Graduate Medical Education or by contacting: Secretary, Residency Review Committee for Nuclear Medicine, 535 North Dearborn Street, Chicago, Illinois 60610. A list of currently approved residency training programs in nuclear medicine is available from the ABNM National Office.

Scope of Examination

The examination consists of an objective type examination administered in a morning and afternoon session. The examination evaluates the applicant's knowledge and competence in the management of patients in the area of clinical nuclear medicine, including, but not limited to, radiobioassay, *in vitro* and *in vivo* measurements, nuclear imaging, and therapy with unsealed radionuclides. Also included is an evaluation of the candidate's knowledge in the related sciences of medical nuclear physics, radiation biology, radiation protection, instrumentation, radiopharmaceutical chemistry and statistics; it may also include pathology, physiology, electronics, and other basic sciences associated with nuclear medicine.

Applications

Applicants who wish to be examined by the Board must complete, sign and file with the Board office an application on the official form together with the supporting data required by the application. The application must include two photographs of the applicant, signed on the side, and a check to cover the examination fee. The applicant must arrange to have two Evaluation forms from his/her Residency Program Director returned directly to the ABNM office.

Before the final action on applications, officers, members, and employees of the Board are not authorized to estimate the eligibility of applicants. Applicants are requested not to discuss or write for opinions regarding the status of their application. The Board decides on eligibility to take the examination only by approving or disapproving individual applications, and accordingly has no "Board Eligible" category.

Inquiries concerning the applicability of previous training and experience needs should be sent to the Board office. A copy of the Board's response to these inquiries should be forwarded with any subsequent examination application.

Release of Information

Candidates will receive the results of their examinations (pass/fail letter) approximately three months after the examination.

A list of diplomates of the ABNM is published in the *Directory of Medical Specialists*, published for the American Board of Medical Specialties by Marquis Who's Who.

Obstetrics and Gynecology

Upon request and with the approval of the Board Chairman, the Board releases information on diplomates to Federal and State licensing bodies and to educational and professional organizations for specific, limited, and appropriate professional use. An authorization for release of this information is a part of the examination application form. No other information is released on individual applicants, examinees, or on individuals failing an examination.

Policy on Re-examination

Applicants who fail the examination are eligible for re-examination. Applicants who qualified for the 1976 examination, by fulfilling one of the alternative training requirements, but who failed or who withdrew for a valid reason may take a subsequent examination. An examination fee must accompany each completed application for re-examination. If an applicant is disqualified from the examination by reason of dishonesty in the application or in taking the examination and his examination is invalidated by the Board, re-examination shall be the Board's discretion.

Recertification

The ABNM is studying mechanisms to effect voluntary recertification. The ABNM will not rescind initial certificates unless a date of expiration is a condition of the original certificate. No certificate issued to date contains an expiration date.

Journals Publishing Information on Application and Examination Schedules

Annals of Internal Medicine (Medical News Section)
The Journal of the American Medical Association
 (Examinations and Licensure Monthly Section)
The Journal of Nuclear Medicine

Changes in Policies and Procedures

The Board reserves the right to make changes in its fees, policies, and procedures at any time, and cannot assume responsibility for giving advance notice thereof. The provisions of this publication are not to be construed as a contract between any candidate and the American Board of Nuclear Medicine.

Fees

The examination fee must accompany the application. If the applicant is rejected by the Board, or withdraws prior to August 15, the application processing fee of \$50 will be retained by the Board. If the applicant withdraws after August 15, the entire examination fee will be retained by the Board.

AMERICAN BOARD OF OBSTETRICS AND GYNECOLOGY

William J. Dignam, President, Los Angeles
 Albert B. Gerbie, Vice President, Chicago
 Charles A. Hunter, Jr., Director of Evaluation, Indianapolis
 J. George Moore, Chairman of the Board, Los Angeles

 A. Brian Little, Representative, Cleveland, Ohio
 William J. Le Maire, Miami
 Luther M. Talbert, Chapel Hill, North Carolina
 Samuel S. C. Yen, La Jolla, California

Types of Board Status**1. Active Candidate Status**

A. A candidate for certification may achieve active candidate status when upon application the Board rules that he/she has fulfilled the requirements to take the next regularly scheduled examination.

B. To maintain active candidate status the candidate must have applied and have been ruled eligible to take the next appropriate regularly scheduled examination: written or oral.

C. Active candidate status which has been interrupted may be regained only by reapplication and reaffirmation by the Board of a candidate's current eligibility to take the next appropriate examination.

2. Diplomate Status

A candidate becomes a Diplomate of the Board when he/she has fulfilled all requirements, has satisfactorily completed the written and the oral examinations and has been awarded the Board's Diploma.

The Certification Process

Certification as a specialist in obstetrics and gynecology is the end of a process lasting many years. The required minimum duration of graduate education is four years.

During the final year of graduate training, it is necessary for the individual desiring certification in obstetrics and gynecology to initiate certain measures which will continue the certification process. Because most graduate training programs begin on July 1 and end on June 30, the following summary of the certification process is based on these dates. However, applicants who complete residency training at unusual times will have an extended time in the certification process.

Between August 15 and November 30 of the final year of residency, the candidate should request and complete the application for the written examination. If he/she is ruled eligible to take the examination, he/she will do so in June of the final year of residency.

If he/she passes the written examination, the candidate enters a two-year period of practice in the specialty (or a post-residency fellowship). The candidate is required to provide a list of patients under his care for a 12-month period beginning on July 1 of his/her second year of practice. Between January 1 and February 28 of his/her second year of practice, the candidate should request and complete the application for the oral examination. The candidate's list of patients or critical summaries must be mailed to the Board office between July 1 and August 31 following the completion of the 12-month period of the patient list. If ruled eligible the candidate thus takes the oral examination in November or February of the third year of practice.

The certification process for the majority of candidates, is summarized in the table below.

Important Dates in the Certification Process**A. Final year of residency**

July 1—Commence.

September 1—November 30—Apply for written examination

June—Take written examination

- B. First year of practice
No Board activities necessary
- C. Second year of practice
July 1 to June 30—Patient List
January 1-February 28—Apply for oral examination
- D. Third year of practice
August 31—Deadline for submission of patient list
November or February—Take oral examination

Responsibility of a Candidate

It is the responsibility of the candidate to seek information concerning the current requirements for certification as an obstetrician and gynecologist. The Board does not assume responsibility for notifying a candidate of changing requirements or the impending loss of his eligibility to take an examination.

A physician who formally obligates himself/herself to an approved residency program and then later breaks his/her agreement without justifiable cause may be required to provide an explanation satisfactory to the Board before being considered to have satisfactorily served as a resident in an accredited program.

The Written Examination

The Written Examination is a three hour examination consisting of questions of the objective (multiple choice) type. Questions will be chosen from each of the following areas of knowledge:

- A. Anatomy, Embryology and Genetics.
- B. Physiology.
- C. Endocrinology, Fertility and Infertility.
- D. Gynecology.
- E. Obstetrics.
- F. Medicine, Surgery and Psychosomatic Problems.
- G. Pathology.
- H. Oncology.

The candidate will also be expected to demonstrate skills necessary to apply basic knowledge to the management of clinical problems. These skills include:

- 1. Obtaining Needed Information.
- 2. Interpretation and Use of Data Obtained.
- 3. Selection, Instituting and Implementing Care.
- 4. Management of Complications.
- 5. Following and Continuing Care.

Requirements

General-For All Candidates

- 1. Degree of Doctor of Medicine, or an equivalent degree, and unrestricted license to practice medicine in one of the states or territories of the United States or a province of Canada or unrestricted privileges to practice medicine in the United States Armed forces.
- 2. The candidate will be required to have completed not less than four years in accredited clinical programs, with not less than 36 months of progressive responsibility for the care of obstetrics and gynecologic patients, including the usual time as "Chief Resident" in the program. Completion of a year of "internship—PG I" plus a three year residency program, or a four year residency program will fulfill this requirement.
- 3. The Board recommends that the candidate spend a significant portion of graduate education in a broadly oriented approach to patient care.

Requirements for Candidates with Graduate Medical Education (Residency) in the United States or Canada

- 1. General Requirements.
- 2. Completion or near completion of a graduate education program in obstetrics and gynecology accredited by the Residency Review Committee for Obstetrics and Gynecology or the Council of the Royal College of Physicians and Surgeons in Canada.

Requirements for Candidates with Graduate Medical Education (Residency) in a country other than the United States or Canada

- 1. Fellows of the Royal College of Obstetricians and Gynecologists (U.K.):
 - a. General Requirements.
 - b. Completion of one year of resident education (or its equivalent) in the United States in an accredited program.
 - c. Submission of a statement from the Program Director attesting that the candidate's knowledge and skills are comparable to others who have satisfactorily completed his/her program.
- 2. Members of the Royal College of Obstetricians and Gynecologists (U.K.):
 - a. General Requirements.
 - b. Completion of not less than two years in an accredited residency in the United States, including one year as Chief Resident.
 - c. Submission of a statement from the United States program director attesting that the candidate's knowledge and skills are comparable to others who have satisfactorily completed his/her program.
 - d. Submission of a statement from the program director in the U.K. certifying his/her previous training and competence.
- 3. Other Foreign Training:
 - a. General Requirements.
 - b. Completion of no less than three years of an accredited residency program in the United States including one year as chief resident.
- 4. Exceptions to the previous requirements may be made by *special action of the Board*, upon request of a program director of an accredited residency in obstetrics and gynecology, after a candidate has had one year of professional practice with unrestricted privileges to practice as an obstetrician/gynecologist in that hospital.

Admission to the Written Examination

The candidate ruled eligible to write the examination will be sent an AUTHORIZATION for ADMISSION form which must be presented to the Proctor at the time and place of examination. When a candidate is scheduled to complete his/her residency program after the date of the written examination (but before September of that year), verification of the currently satisfactory manner in which the candidate is completing his/her residency must be reaffirmed by the signature of the Director of the residency program on the AUTHORIZATION for ADMISSION form, dated within the month the candidate is scheduled to write the examination.

Results of the Examination

The results of the examination written in late June will usually be reported to each candidate in approximately eight weeks.

A passing grade on the written examination does not establish a candidate's eligibility to take the oral examination for certification.

Requests for Re-examination

A candidate eligible to write the examination in 1980 who fails to do so, as well as the candidate who writes but fails to pass the examination in 1980 must write the Board office on or before November 30, 1980 asking to be scheduled for the examination in 1981. All such requests must be accompanied by payment of the reapplication fee of \$75.00. It is not necessary to submit a new application in order to repeat the examination but to maintain eligibility to write the examination the candidate must have asked to write the next scheduled examination and have paid the reapplication fee. THE CANDIDATE MUST INDICATE CONTINUATION OF UNRESTRICTED LICENSE TO PRACTICE MEDICINE IN ONE OF THE UNITED STATES OR A PROVINCE OF CANADA.

The examination fee must be paid each year a candidate is to be scheduled to write the examination.

Obstetrics and Gynecology

The Oral Examination

All correspondence, applications and information directed to the Board must be in English.

The Oral Examination is given twice each year—in November and February. There is one credentialing process and one set of deadlines. Candidates will be assigned geographically to an examination with no option for selection of time and place.

Content of the Oral Examination

The Oral Examination is designed to test the candidate's knowledge and skills in solving clinical problems in obstetrics-gynecology. It is to be emphasized that those candidates submitting a case list(s) (see below) which contains cases in a single specialty within obstetrics and gynecology will be examined in all areas of obstetrics and gynecology. Approximately half of the examination will consist of questions concerning patient management problems. The candidate's list of patients will be freely used by the examiners for this purpose but additional basic clinical problems will be included. The remainder of the examination will include recall of basic knowledge in obstetrics-gynecology and interpretation of gross and microscopic pathology, x-ray films, sonograms and related material from photographic slides.

Microscopes and video projectors will be used. The knowledge and skills required for the Oral Examination are the same as those listed in regard to the Written Examination.

The report of the examining team will be reviewed by the Board of Directors and each candidate is passed or failed by vote of the Board.

Requirements

Requirements to Take the Oral Examination for Candidates Practicing in the United States or Canada

All requirements as stated for written examination plus:

In a setting where a candidate has personal responsibility for the care of obstetric and gynecologic patients.

1. Passing grade on the written examination.
2. Unrestricted licensure to practice medicine in one of the United States or Territories of the United States or a Province of Canada, or unrestricted privileges to practice medicine in the U.S. Armed Forces for no less than 12 months prior to the date of the application.
3. Actively engaged in the practice of obstetrics and gynecology for no less than 12 months prior to *date of application*.
4. Unrestricted privileges to practice as an obstetrician-gynecologist in each of the hospital(s) in which the candidate has been responsible for patient care for the 12 months ending June 30 prior to the scheduled examination.
5. Candidates currently in Board accredited fellowships are exempt from the requirement of unrestricted hospital privileges, but must submit a letter from the Fellowship program director describing the candidate's responsibilities for patient care.
6. Submission of a typewritten list (in duplicate) on or before August 31 preceding his/her examination, of all patients dismissed from his/her care in all hospitals during the 12 months ending June 30 prior to the scheduled examination and also a list of 25 patients from his/her ambulatory (office) practice.

The candidate is *personally* responsible for the proper preparation, accuracy and completeness of the case lists.

7. On the day of examination the candidate will be expected to sign the following statement on the Authorization for Admission form: "There have been no restrictions in my hospital privileges since the date of my application."
- B. In a setting where a candidate's responsibilities for the care of obstetric and gynecologic patients have involved *only* supervision of the care given by others.
1. Passing grade on the written examination.
 2. Unrestricted licensure to practice medicine and actively

engaged in practice in one of the States or Territories of the United States or a Province of Canada or unrestricted privileges to practice medicine in the U.S. Armed Forces for no less than 12 months prior to the date of the application.

3. Satisfactory service in a setting acceptable to the Board which provides significant clinical and/or educational responsibility in obstetrics-gynecology for no less than 12 months preceding his/her application.
4. Submission with the application of a letter from the Chief of Obstetrics and Gynecology describing the candidate's clinical and/or educational responsibilities during the period of time the candidate prepared critical summaries. This letter also must *attest* to the fact that the candidate has had no patients for whom he/she has assumed personal responsibility.
5. Submission (in duplicate) on or before August 31 of a critical evaluation—study of 25 representative patients for whom he/she has assumed an appreciable degree of direct responsibility during the 12 months ending June 30 prior to the scheduled examination.

NOTE: PRACTICE WHICH TOTALLY CONSISTS OF AMBULATORY CARE WILL NOT BE CONSIDERED ADEQUATE TO FULFILL THE REQUIREMENTS TO TAKE THE ORAL EXAMINATION.

Requirements to Take the Oral Examination for Candidates Practicing in a Country Other Than the United States or Canada

1. Passing grade on the written examination.
2. Engagement exclusively in professional activities relating to obstetrics-gynecology for no less than 12 months immediately preceding application to take the oral examination.
3. Submission of a letter with the application verifying the candidate's responsibility for his/her involvement in the care of obstetric and gynecologic patients from a senior responsible officer in the hospital(s) in which the candidate has been involved in patient care.
4. Submission on or before August 31 preceding his/her examination of (a) typewritten summaries (in duplicate) in English providing critical evaluation—studies of 25 representative patients for whom he/she has assumed a significant degree of responsibility during the 12 months ending June 30 prior to the scheduled examination (b) a typewritten list (in duplicate) of all patients dismissed from his/her care in all hospitals during the 12 months ending June 30 prior to the scheduled examination, and a list of 25 patients from his/her ambulatory practice.

Determination of Eligibility

The Board will request, by confidential inquiry, documented evidence concerning a candidate's professional reputation and in-hospital practice privileges from administrative officers of organizations and institutions to whom the candidate and his/her conduct of practice is known.

Each candidate will be required to furnish the Board with certain prescribed information concerning his/her performance in practice (maternal mortality rate—perinatal mortality rate—Caesarean Section rate—etc.).

Time as a "resident" or "house officer" in excess of that necessary to fulfill the requirements to take the written examination and/or a teaching or research appointment which does not involve appointment to the staff of an approved hospital with unrestricted privileges to practice as an obstetrician and gynecologist, will not be acceptable evidence of a degree of responsibility for patient care that is acceptable fulfillment of the required "responsibilities in post-residency practice."

Time in a post-residency fellowship which involves responsibility for patient care, if the Fellowship has been approved by a specialty Division of the Board, will be accepted as fulfillment of the "time in practice" required of the candidate to take the oral examination.

Patient List for the Oral Examination

Each candidate for the Oral Examination must prepare one

or both (foreign practice) of the following types of patient lists for review by his Examiners at the time of examination. The candidate's list of patients will be freely used as a basis for questions which will be patient-management oriented. Questions will be developed which test the ability of the candidate to:

- 1) Develop a Diagnosis. This includes the necessary clinical, laboratory and diagnostic procedures.
- 2) Select and Apply Proper Treatment under elective and emergency conditions.
- 3) Manage Complications. This includes prevention, recognition and treatment.
- 4) Plan and direct follow-up and continuing care.

THE CANDIDATE SHOULD BRING A DUPLICATE PATIENT LIST TO THE ORAL EXAMINATION FOR PERSONAL REFERENCE.

Type 1. Lists of Hospitalized and Selected Ambulatory Patients. The candidate's list must include all hospitalized patients discharged or transferred from the candidate's care during the twelve months ending June 30 of the current year and 25 ambulatory (office) patients and must be mailed to the Board office on or before August 31 preceding the November examinations.

The patients listed must be only those for whom the candidate has had personal responsibility for professional management and care. Recording such professional responsibility implies that the candidate has personally controlled the medical and/or surgical management of each patient listed. In the case of partnership or group practice, the patients listed should be only those managed by the candidate.

Type 2. Critical Summaries. Candidates responsible for patient care in a setting where the candidates responsibilities for patients have involved *only* supervision of care given by others, and those in practice in a foreign country are required to provide 25 critical summaries, preferably hospitalized patients for whose care they have had management responsibility.

Patients seen by a candidate in an ambulatory care setting may provide a basis for acceptable critical summaries provided (a) the clinical problems summarized require comprehensive obstetric and gynecologic care, and (b) the candidate participated in the provision of such total and continuing care including hospitalization. The summary and critique for each of the 25 patients should be concise, but include a summary of data and those diagnostic procedures which supported the clinical diagnosis and patient management and be critically discussed.

Procedure

A candidate ruled eligible in June to take the Oral Examination the following November or February will be so notified about July 15. Following this notification and before August 31, the candidate must submit the required Type 1 list of patients and/or Type 2 critical summaries.

A patient list and the critical summaries should be accurately typed in duplicate across unbound sheets of white paper 8½ x 11 inches in size. A separate list for obstetric and for gynecologic patients is required for each hospital. The headings must conform in all details and provide the information indicated by the format of the forms enclosed with the oral examination.

Standard nomenclature should be used. Abbreviations are not acceptable. Only English language will be acceptable.

A candidate should note that the duplicate lists of patients or critical summaries will not be returned to him after the examination. He should bring his own duplicate list to the examination.

A LISTING OF PATIENTS (a) NOT PROVIDING THE INFORMATION REQUESTED AND (b) NOT RECORDED IN ACCORDANCE WITH THE FORMAT REQUESTED OR CRITICAL SUMMARIES WHICH DO NOT INCLUDE CRITICAL COMMENT IN REGARD TO THE MANAGEMENT INDICATED MAY DISQUALIFY THE CANDIDATE FOR ADMISSION TO THE ORAL EXAMINATION OR MAY

STANTIALLY CONTRIBUTE TO THE CANDIDATE'S FAILURE TO PASS THE ORAL EXAMINATION.

IF THE CASE LIST OR CRITICAL SUMMARIES ARE NOT PROPERLY PREPARED, A CANDIDATE MAY NOT BE SCHEDULED TO TAKE THE ORAL EXAMINATION.

1. GYNECOLOGY

A list of gynecologic patients should be prepared in the format accompanying the application and grouped in accordance with treatment as follows:

- (1) major operative procedures
- (2) Minor operative procedures
 - (a) hospitalized patients
 - (b) ambulatory or short-stay patients (surgi center)

The preoperative diagnosis should appear for all major and minor surgical procedures. For non-surgical conditions the admission diagnosis should be recorded. The treatment recorded should include all surgical procedures as well as primary non-surgical therapy. Pathologic diagnosis refers to the surgical pathologic diagnosis. In cases without tissue for histologic diagnosis the final clinical diagnosis should be listed.

Days in hospital on this listing of patients, as well as on all other lists, is the arithmetic difference between date of discharge and date of admission.

2. OBSTETRICS

A list of obstetric patients should be prepared in the format accompanying the application. List separately each patient with a complication or abnormality, as well as medical and surgical intervention during pregnancy, labor, delivery and the puerperium. In addition, a total of the number of normal, uncomplicated obstetric patients, managed by the candidate during the same 12 month period should appear at the end of the obstetric list.

Interpretation of "normal obstetric patients" for this listing implies that:

- pregnancy, labor, delivery and the puerperium were uncomplicated,
- labor began spontaneously between the 37th and 42nd week of gestation,
- the membranes ruptured or were ruptured after labor began,
- presentation was vertex, anterior or transverse, labor was less than 24 hours in duration,
- delivery was spontaneous or by outlet forceps with or without episiotomy, from an anterior position,
- the infant was not asphyxiated (Apgar 6 or more) of normal size and healthy,
- the placental stage was normal and blood loss was not excessive.

Deliveries not fulfilling these criteria must be listed individually.

3. PREGNANCY TERMINATIONS

The total number of uncomplicated terminations of pregnancy managed by the candidate during this same 12 month period, of twelve or less weeks duration, should be reported simply as a total number.

Interruptions of pregnancy of more than twelve weeks (menstrual age) duration should be prepared in the format accompanying the application. List each patient separately, indicating the duration of pregnancy, the technique employed, the duration of (1) hospitalization, and/or (2) your observation of the patient.

Also list separately as individual patients, all with complications following terminations of pregnancy, either observed or reported to you following an interruption of pregnancy, regardless of the duration of the pregnancy when termination was initiated.

4. COVER SHEETS

Each list of patients, (1) gynecologic, (2) obstetric, and (3) terminations of pregnancy, from each hospital should be verified as illustrated by the form accompanying the application. Note that the record librarian or other hospital official must attest that (a) the patients listed were cared for by the candidate, and (b) that all of the hospitalized patients dis-

Obstetrics and Gynecology

missed from the candidate's care have been separately listed or reported in the totals reported for the period indicated.

5. SUMMARY SHEET

Using the form provided for this purpose, prepare a summary of all cases for all hospitals combined.

6. AMBULATORY (OFFICE) PATIENTS:

A list of 25 patients from the candidate's ambulatory (office) practice should be prepared in the format accompanying the application. List separately patients who have presented with any of the following problems. List no more than five patients from any one category.

- Genetic Problems
- Amenorrhea
- Infertility
- Abnormal Uterine Bleeding
- Developmental Problems
- Sexual Dysfunction
- Contraception Complications
- Hirsutism
- Abnormal Cervical-Vaginal Cytology
- Pelvic Pain
- Vaginal Discharge/Pruritus
- Breast Problems
- Medical Complications of Pregnancy
- Premenstrual Tension
- Postoperative Problems
- Sexually transmitted disease
- Asymptomatic Pelvic Mass
- Pelvic Relaxation Problems
- Urinary Tract Infection
- Psychosomatic Problems
- Menopause

List separately each patient and include the problem (one of the listed categories), diagnostic procedures, treatment, results and number of office visits during the 12 month period.

Ruling of Ineligibility

A candidate ruled ineligible to take an oral examination, may subsequently re-apply, but must then submit a new application, pay the application fee, and meet the requirements applicable at the time he/she re-applies.

Re-examinations

A candidate who fails to pass the oral examination must reapply in order to take the examination another year by submission of a new application during January and February, with payment of the reapplication fee of \$150.00.

A candidate failing the oral in February will be given until March 31 to reapply with a late fee penalty.

A candidate reapplying for re-examination may again be asked to provide verification of his/her responsibilities for patient care and will again be notified, early in July in regard to his/her eligibility to take the next examination.

A candidate accepted for re-examination must again submit, on or before August 31 prior to examination either (1) duplicate, typewritten and verified lists of all patients dismissed from his/her care in all hospitals during the 12 months prior to June 30 prior to the oral examination, or (2) critical evaluation study of 25 representative patients, as required of the candidate whose responsibilities in obstetrics and gynecology primarily involved supervision in an institutional setting.

The examination fee of \$250.00 is due each time a candidate receives notice that he/she can be scheduled to take the oral examination. Each re-examination will be conducted by examiners who have no knowledge of the fact or circumstances of a candidate's previous failure.

Postponement of Oral Examination

A candidate failing to take an oral examination for which he/she had been scheduled must submit a new application during January or February of the following year when his/her eligibility to take the next examination will be determined by the Board during the late June annual meeting, on

the basis of the candidate's professional activities as reported during the current year. Payment of the \$150.00 re-application fee must accompany each re-application.

If notified of his/her eligibility to take the next oral examination he/she must again submit before August 31 either (1) a listing of all patients dismissed from his/her care in all hospitals during the 12 months ending June 30 prior to the oral examination, or (2) a critical evaluation study of 25 representative patients, as required of the candidate whose responsibilities in obstetrics and gynecology involve only supervision in an institutional setting.

Fees

Since the fees have been computed to cover the costs of examination and administrative expense, they will not be refunded. All fees must be paid in United States currency.

The Written Examination

The application fee of \$75.00 must be enclosed with each application, reapplication or request to write the examination. The candidate will usually be notified early in April that his/her application or request has been approved, at which time the \$175.00 examination fee will be due. If payment of the examination fee has not been received in the Secretary's office postmarked on or before May 1, the candidate will not be scheduled to write the examination in June.

Examination fees may be refunded provided candidates inform the Board office of their inability to write the examination prior to June 1.

The Oral Examination

The application fee of \$150.00 must be enclosed with each application to take the oral examination. A candidate notified in mid-July of his/her eligibility to take the oral examination in November or February is required to pay the \$250.00 examination fee before he/she will be scheduled to take the oral examination. If the examination fee has not been received in the Secretary's office postmarked on or before August 31, the candidate will not be scheduled to take the examination the following November or February.

Examination fees may be refunded provided candidates inform the Board office of their inability to write the examination prior to September 30th if scheduled for November and December 31 if scheduled for February.

Late Application Fees

Consideration of late applications requires additional handling, added correspondence and the travel involved in a special meeting of the Credentials Committee, all of which add up to the increased expenses accounting for additional fees for consideration of a late application or late request for re-examination.

The need for correspondence, for additional information or for verification of credentials not infrequently requires postponement of a decision regarding a candidate's eligibility.

An application, or request for re-examination received after the deadline can be given the special consideration required, provided: the late application is accompanied by— (1) a letter from the candidate requesting special consideration with (2) payment of the regular application fee of \$75.00 plus the "late application fee" of an additional \$75.00 (total \$150.00) or in the case of a late application to take the Oral Examination the total fee would be \$150.00 plus \$150.00 (\$300.00).

A candidate failing the oral in February will be given until March 31 to reapply without a late fee penalty.

No application received after December 31 will be considered to write the following June examination, and

No application received after March 31 will be considered to take the Oral Examination the following November or February.

Revocation of Diploma or Certificate

Each candidate when making application, signs an agreement regarding disqualification or revocation of his/her diploma or certificate for cause. Revocation may occur whenever:

1. The physician shall not in fact have been eligible to

receive the diploma or certificate, irrespective of whether or not the facts constituting such ineligibility were known to or could have been ascertained by this Board, its members, directors, examiners, officers or agents at or before the time of issuance of such diploma or certificate.

2. Any rule governing examination for a diploma or certificate shall have been violated by the physician but the fact of such violation shall not have been ascertained until after the issuance of his diploma or certificate.

3. The physician shall violate the standards of the ethical practice of medicine then accepted by organized medicine in the locality in which he/she shall be practicing and, without limitation of foregoing, the forfeiture, revocation or suspension of his/her license to practice medicine, or the expulsion from, or suspension from the rights and privileges of membership in a local, regional or national organization of his professional peers shall be evidence of a violation of such standards of the ethical practice of medicine.

4. The physician shall fail to comply with or violate, or the issuance or receipt by him/her of such diploma or certificate shall have been contrary to or in violation of, the Certificate of Incorporation, the By-Laws or the Rules and Regulations of this Board.

Upon revocation of any diploma or certificate by this Board as aforesaid, the holder shall return his/her diploma or certificate and other evidence of qualification to the Secretary of the Board and his name shall be removed from the list of certified specialists.

AMERICAN BOARD OF OPHTHALMOLOGY

- Bradley R. Straatsma, Chairman, Los Angeles
- William H. Spencer, Vice-Chairman, San Francisco
- J. Donald M. Gass, Miami
- Dan B. Jones, Houston, Texas
- Thomas O. Kearns, Rochester, Minnesota
- G. Richard O'Connor, San Francisco
- Marshall M. Parks, Washington, D.C.
- David Paton, Houston, Texas
- Melvin L. Rubin, Gainesville, Florida
- David Shoch, Chicago
- Bruce E. Spivey, San Francisco
- Robert B. Welch, Baltimore, Maryland
- Robert N. Shaffer, Secretary-Treasurer, San Francisco, Office of the Board, 8870 Towanda Street, Philadelphia, Pennsylvania 19118

Requirements

Many candidates write the Secretary-Treasurer outlining their training and asking for an estimate of their qualifications and whether further training is required. The Board's requirements, as published herewith, provide this information and any candidate should be able to estimate his/her status after studying these requirements. Individual officers or members of the Board of Directors cannot and will not make such estimates. All determinations of a candidate's status will be made only by the Committee on Admissions in accordance with the rules and regulations of the Board, after submission of an application for examination and payment of the registration fee, which must accompany the application. Personal interviews with officers and members of the Board of Directors should not be requested at any time.

All applicants must have graduated from a medical school or from a school of osteopathy. Graduates of either schools of medicine or osteopathy in the United States or Canada must have a valid and unrestricted license to practice medicine in the United States or a Province of Canada. An applicant may have graduated from a medical school of some country other than the United States or Canada; if he/she is a citizen of the United States or Canada he/she must have a valid and restricted license to practice medicine in the United States or Canada. If he/she is not a citizen of the United States or Canada he/she must have a certificate from the Educational Council for Foreign Medical Graduates or passed the VISA Qualifying Examination and have a valid and unrestricted

license to practice medicine where he/she intends to practice.

A first post-graduate clinical year or equivalent training will be required of all candidates entering ophthalmology training programs (PGY2) beginning July 1, 1981.

All applicants must have completed a minimum of thirty-six (36) months of formal residency training in ophthalmology in a program in either the United States, approved by the Residency Review Committee and accredited by the Liaison Committee on Graduate Medical Education, or in Canada approved by the Royal College of Physicians and Surgeons of Canada.

If a program is disapproved during the course of a resident's training he/she must obtain the required number of months of training in another approved program.

Applications

Applicants who wish to be examined by the Board shall complete, sign and file with the office an application on the official form then in use by the Board, together with the supporting data required by the application. Applications can be obtained from the Chairmen of the individual residency programs or the office of the Board. Applications must be postmarked no later than August 1st in order for the applicant to be considered for the Written Qualifying Test to be conducted during the following calendar year. All supporting information including letters of endorsement must also be postmarked by August 1. (No extension to this deadline will be made for any reason.)

Applications shall be accompanied by a check payable to the Board for \$330.00 to cover the application fee. No application will be considered until the fee and all required supporting data, including letters of endorsement, have been received at the office.

Applicants who meet all requirements are admitted to the Written Qualifying Test if the application is approved by the Board.

After an applicant has been advised by the Board that he/she has been accepted for examination, he/she shall promptly submit to the office a photograph.

An incomplete application can only remain active for 2 years from date of receipt. If the applicant does not complete his/her application in this period for review by the Committee on Admissions the application will no longer be valid and the registration fee will be returned.

Fees

The current fees of the Board are as follows:

- Review of application and registration for Written Qualifying Test, \$330, payable with application
- Oral examination, \$220, payable on successful completion of the Written Qualifying Test
- To repeat the Written Qualifying Test, \$220
- To repeat the entire oral examination, \$220
- To repeat a single subject of the oral examination, \$110
- To repeat two or three subjects of the oral examination, \$165

The application fee, oral examination fee and re-examination fees charged by the Board have been determined on the basis of the costs incurred by the Board in the examination of applicants and the administration of its business and may be modified from time to time by the Board of Directors. The members of the Board serve without compensation except reimbursement of expenses.

Cancellations

A fine of \$50.00 will be charged any candidate who either cancels or fails to keep appointment, regardless of reason, for either the written or oral examination after assignments have been made.

Written Qualifying Test

Before being accepted for oral examination, each applicant must pass a Written Qualifying Test. This is a multiple choice test which may cover any topics of ophthalmology and is especially devoted to the following subjects:

Ophthalmology

1. Fundamentals and Principles of Ophthalmology (Anatomy, Biochemistry, Physiology and Pathology)
2. Optics, Refraction and Contact Lenses
3. Intraocular Inflammation, Uveitis, and Ocular Tumors
4. Retina and Vitreous
5. Neuro-Ophthalmology
6. Binocular Vision and Ocular Motility
7. External Disease and Cornea
8. Glaucoma, Lens, and Anterior Segment Trauma
9. Orbit, Eyelids, and Lacrimal System
10. General Medical and Care Problems

The test has been described in the Board's booklet entitled "Written Qualifying Test."

The Written Qualifying Test is given simultaneously in a number of designated cities in the United States and Canada in January of each year. An applicant who passes the Written Qualifying Test shall submit to the office a check payable to the Board for \$220.00 to cover the fee for the oral examination and shall thereafter be assigned to an oral examination. An applicant who fails the Written Qualifying Test may apply for reexamination and will be permitted to repeat the examination if he presents evidence of additional preparation and pays the reexamination fee of \$220.00. If an applicant does not repeat the test within twenty-four (24) months after such failure, he/she will be required to submit a new application for approval by the Board and an additional application fee and again pass the Written Qualifying Test. *An applicant who fails the Written Qualifying Test on two consecutive occasions may reactive the application for approval and submit an additional application fee but will be required to present evidence of additional preparation.*

An applicant who fails to take the Written Qualifying Test within twenty-four (24) months after notice has been sent to him/her that his/her application has been accepted will not thereafter be accepted for examination unless he/she reactivates the application for approval and submits an additional application fee.

Oral Examinations

Oral examinations are usually held twice annually at a time and place determined by the Board and shall be announced in the Journal of the American Medical Association. The Board reserves the right to limit the number of candidates admitted to any scheduled examination and to designate the candidates to be examined. *The oral examination must be taken within twenty-four (24) months after notice has been sent to the applicant that he/she has passed the Written Qualifying Test, or the applicant shall be required to reactive the application for approval and submit an additional application fee, and again pass the Written Qualifying Test.*

The oral examination is divided into the following Topics:

1. External diseases
2. Medical ophthalmology
3. Histopathology
4. Refraction and visual physiology
5. Ocular motility
6. Neuro-ophthalmology
7. Principles of ophthalmic surgery

Candidates are expected to be able to analyze a patient's history, establish a clinical impression and differential diagnosis, describe the natural course of various disorders and the treatment contemplated with indications and contraindications.

1. **External Diseases of the Eye and Adnexa.** The basic sciences of microbiology and immunology are the foundation for the clinical knowledge of external diseases of the eye and its adnexa. In the examination, pictures or slides of common local or systemic conditions affecting the external eye and its adnexa are used as a basis for discussion. Candidates are expected to be familiar with the principles of instrumentation, clinical and laboratory diagnosis and methods of examination.

2. **Medical Ophthalmology.** Candidates are expected to demonstrate competence in the spectrum of ophthalmol-

ogy that includes ocular manifestations of systemic disease, systemic complications or implications of ocular therapy, congenital anomalies and abiotrophies. In addition, the candidate should be able to outline resuscitative measures for respiratory or cardiovascular collapse that may occur in patients under his care. The candidate should be able to recognize and correctly name certain ocular disorders when presented with characteristic photographs. Case presentations, simulated patients, photographs, etc. may be used as a basis for eliciting this information.

3. **Histopathology.** Candidates are expected to be familiar with the general pathology as well as with the pathogenesis and pathophysiology of diseases of the eye. They should recognize normal histologic appearance and pathologic changes and be able to correlate them with the clinical observations.

4. **Refraction and Visual Physiology.** Candidates are expected to demonstrate familiarity with the following:

- (a) The underlying optical principles of refraction and retinoscopy;
- (b) The various types of spectacle lenses and the effects of decentration, tilting, and the like;
- (c) The indications for various methods of examination;
- (d) Contact lenses, visual aids for low visual acuity, colored lenses, and various types of safety lenses;
- (e) The essentials of visual physiology including visual acuity, light and dark adaptation, accommodation, color vision, electroretinography, electrooculography, and visually evoked potentials.

5. **Ocular Motility.** Candidates should understand the anatomy and physiology of the neuromuscular mechanism subserving ocular motility and binocular vision. They should be able to discuss in detail the onset, course, and management of various types of comitant and non-comitant deviations. They are expected to discuss in detail abnormal sensory and motor mechanisms and methods of diagnosis and treatment.

6. **Neuro-Ophthalmology.** Candidates are expected to be familiar with ophthalmic manifestations of various neurologic disorders. They are expected to know the anatomy and physiology of the central connections of the eye and their variation in disease. They should recognize the common abnormalities involving the orbit and related structures as demonstrated on roentgenographic examination. They should understand the diagnostic measures required to demonstrate various neurologic disorders and the manifestations of disease as demonstrated by examination of the visual fields.

7. **Principles of Ophthalmic Surgery.** Candidates should understand the indications for and principles of ophthalmic surgery. They should be familiar with relevant methods of diagnosis and differential diagnosis, and with the choices of surgical technique for various ocular disorders. Candidates are expected to be familiar with the management of trauma to the globe, lids and orbit. They should be familiar with the prognosis, the cause and management of complications and the long-term results of ophthalmic surgery.

Re-examination

An applicant who fails the Written Qualifying Test may apply for re-examination and will be permitted to repeat the test if he/she presents evidence of additional preparation and pays the re-examination fee of \$220.00. If an applicant does not repeat the test within twenty-four (24) months after such failure, he/she will be required to reactive the application for approval and submit an additional application fee. An applicant who fails the Written Qualifying Test on two consecutive occasions may reactive the application for approval and is required to submit an additional application fee and present evidence of additional preparation.

If an applicant fails to pass all subjects within three oral examinations, he/she shall be required to reactive the application for approval and submit the application fee, and pass another Written Qualifying Test, before being admitted to the

oral examination. If an applicant fails five or more subjects in an oral examination he/she will be required to repeat the Written Qualifying Test and pass it successfully before being admitted to an oral examination.

An applicant who fails the entire oral examination may apply for reexamination and will be permitted to repeat the examination within twenty-four (24) months after such failure if he/she presents evidence of additional preparation and pays the reexamination fee of \$220. However, reexamination will not be permitted for a period of twelve (12) months following such failure, in order to allow time for such additional preparation. If an applicant does not repeat the test within twenty-four (24) months after such failure, he/she may reactive the application for approval and submit an additional application fee and again pass the Written Qualifying Test before being admitted again to the oral examinations.

An applicant who fails one or more topics in the oral examination, but not the entire examination, must apply within two years for a reexamination limited to the subjects which he/she failed to pass. He/she shall present evidence of additional preparation and shall pay a reexamination fee of \$110 to repeat the examination in one subject or \$165 in two or three subjects. If an applicant does not repeat the one or more topics within twenty-four (24) months after such failure, he/she will be required to reactive the application for approval and submit an additional application fee and again pass the Written Qualifying Test before being admitted to an oral examination.

Candidates who fail to pass one or two disciplines in the oral examination may apply to sit for the next scheduled examination. Candidates who fail to pass three disciplines or who fail the entire examination must wait one year before being permitted to sit again.

Results of Examinations

Within a reasonable time after completion of the written or oral examinations, the applicant shall be notified by the Secretary-Treasurer as to the results thereof. The decision of the Board as to the results of the written or oral examination shall be final and conclusive. To preserve confidentiality results of an examination will not be given over the telephone.

Certification

An applicant who successfully passes both the written qualifying and oral examinations within the required time limitations hereinabove set forth, as determined by the Board in its sole discretion, shall be entitled to receive a certificate without further consideration of his qualifications by the Board. Physicians who have received the certificate are DIPLOMATES of the Board.

Revocation and Probation

A certificate of the Board may be revoked or the certificate holder placed on probation, in accordance with the rules and regulations of the Board, on the following grounds:

- (a) If the certificate was issued contrary to or in violation of any rule or regulation of the Board,
- (b) If the certificate holder was not eligible to receive, or has since become ineligible to hold, the certificate,
- (c) If the certificate holder made any misstatement or material omission of fact to the Board in his/her application or otherwise.

American Board of Medical Specialties

The American Board of Medical Specialties, previously called the Advisory Board for Medical Specialties, was established in 1933 to serve in an advisory capacity to the American Specialty Boards and to cooperate with organizations that seek its advice concerning the certification of medical specialists. The official recognition of a specialty board by the American Board of Medical Specialties is indicated by the listing of diplomates in the *DIRECTORY OF MEDICAL SPECIALISTS*. The American Board of Ophthalmology contributes approximately \$30.00 per Diplomate certified, to the Ameri-

can Board of Medical Specialties, as do all other medical specialty boards, in support of the activities of ABMS.

Statements of Eligibility

The Board does not issue statements of "eligibility" for its examinations. The only information the Board will divulge is whether a candidate is or is not certified or is or is not scheduled for an examination.

AMERICAN BOARD OF ORTHOPAEDIC SURGERY

William F. Enneking, President, Gainesville, Florida
 Henry J. Mankin, President-Elect, Boston
 Jerome M. Cotler, Secretary-Treasurer, Philadelphia
 Paul Campbell, Portland, Oregon
 Thomas B. Dameron, Jr., Raleigh, North Carolina
 Charles H. Epps, Jr., Washington, D.C.
 J. Ted Hartman, Lubbock, Texas
 Kingsbury G. Heiple, Cleveland
 G. Dean Macewan, Wilmington, Delaware
 Eugene R. Mindell, Buffalo, New York
 Robert L. Samilson, San Francisco
 Philip D. Wilson, New York City
 Henry H. Banks, Executive Director,
 Office of the Board, 444 North Michigan Avenue,
 Suite 2970, Chicago, Illinois 60611

Introduction

1. Orthopaedic Surgery is the medical specialty that includes the investigation, preservation, restoration and development of the form and function of the extremities, spine and associated structures by medical, surgical and physical methods.

2. The American Board of Orthopaedic Surgery, Inc., founded in 1934 as a private, voluntary, non-profit organization, is autonomous and functions unselfishly and objectively for the purpose of conducting investigations and examinations of voluntary candidates. The standing committees of the Board are the Eligibility, Examinations, Graduate Education, Finance, Planning and Development and Recertification committees. Other committees may be named as deemed necessary. Regular meetings of the Board are held twice yearly and special meetings are held on occasion, at appropriate times. The Board establishes minimum educational standards in the specialty, conducts a certifying examination, issues certificates, stimulates education, and aids in the evaluation of educational facilities in the best interests of the public and the medical profession.

3. Applicants desiring certification by The American Board of Orthopaedic Surgery must satisfy requisites of professional education and experience as stated in the Rules and Procedures in force at the time of application. Applicants will be considered regardless of sex, race, color or creed, and will not be rejected for discriminatory, arbitrary or capricious reasons.

4. A current registry of all of its certificate holders is maintained by the Board and is available for consultation by physicians, hospitals, medical schools and others. The names of Diplomates appear in the Directory of Medical Specialists published for the American Board of Medical Specialties by Marquis Who's Who, Inc. of Chicago, Illinois. The Board does not confer any rights on its Diplomates or purport to direct in any way licensed physicians in the conduct of their professional duties. It is neither the intent nor the purpose of the Board to define requirements for membership in any organization or on the staff of any hospital.

5. The members of The American Board of Orthopaedic Surgery are elected from the Diplomates nominated by (1) the American Orthopaedic Association, (2) the American Medical Association, and (3) the American Academy of Orthopaedic Surgeons. They serve without salary.

Minimum Educational Requirements for Board Certification

The American Board of Orthopaedic Surgery evaluates all applicants for their proficiency in orthopaedic surgery. The

Orthopaedic Surgery

minimum educational requirements of the Board should not be interpreted as restricting programs to the minimum standards. Directors of programs may retain residents in the educational program as long as necessary beyond the minimum time of five years in order that the resident achieve the necessary degree of competence in orthopaedic surgery. In order to establish satisfactory competence in the specialty of orthopaedic surgery it has been necessary to define the minimum educational requirements, which are as follows:

Effective with applicants who began their first post-graduate year on or after July 1, 1978, satisfactory completion of five years of approved post-doctoral education is required. Post-doctoral education is defined as education obtained following the granting of the doctoral degree. For those applicants who began their first post-graduate year before July 1, 1978, four years of approved post-doctoral education are required; in this case, only one year of graduate education credit can be obtained from Rule II b. 1-6 below.

- a. During the five years some approved programs may elect to schedule two or more subject areas concurrently. It is necessary that clearly defined education and training in orthopaedic skills be emphasized in the categories of adult orthopaedics, surgery of the spine, including removal of protruded intervertebral discs, children's orthopaedics, fractures and trauma, surgery of the hand, the foot, rehabilitation, and basic science. It is emphasized that where time requirements are indicated in each subject area, these must be considered as *minimal*; additional experience is very desirable.
- b. Except as noted above, two years of graduate education credit may be obtained from the following categories:
 - (1) First post-graduate year (internship, or its equivalent).
 - (2) Residency in general surgery.
 - (3) Residency in orthopaedic surgery in any of the subject areas described in c. below.
 - (4) Residency in related medical and surgical areas.
 - (5) Research or study in laboratory or clinical research. This requires review of the documentation of the research problem by the Committee on Eligibility.
 - (6) Work in military service. Credit is granted only after termination of military service and presentation of a Record of Residency Assignment Form, letters from Chiefs of Services, and a list of operations performed by the applicant. Credit may be granted on the basis of one month of credit for one month of education when obtained on approved programs. One month of credit may be granted for two months of education, not to exceed twelve months, when the applicant is assigned to unapproved hospital services, if approved by the Committee on Eligibility.
- c. It is mandatory that at least three years (36) months be served as an orthopaedic surgery resident in an approved orthopaedic surgery residency training program and include a minimum of:

Adult Orthopaedics	12 months
Children's Orthopaedics	6 months
Fractures/Trauma	9 months

 Concurrent or integrated programs may allocate time by proportion of experience.

It is necessary that the children's educational experience be served in an institution approved for this category. The above mandatory requirements include education in the care of the various anatomical areas of the human body, specifically including the foot, the hand, the spine, the neck, the major joint areas, and involving the contents of the spine, and extremities. The various effects of trauma and athletic injuries are included:

The age groups, from infancy through old age, are expected to be included, as well as the rehabilitation of patients and all phases of diagnosis and treatment and musculoskeletal radiology and laboratory requirements

including emergency and chronic care. In addition, education is expected in areas relating to neurology, rheumatology, basic science, orthotics, prosthetics and physical medicine.

The remaining educational experience may consist of additional education in any of the above areas. No period longer than six months can be served in an unapproved institution.

Basic Science: The subject areas to be included are anatomy, pathology, microbiology, physiology, biochemistry, biomechanics, and other basic sciences related to the musculoskeletal system. This educational program should facilitate the study of what is known in these fields as they relate to orthopaedic surgery and, if possible, to provide opportunities for the resident to apply these basic sciences to all phases of orthopaedic surgery.

The educational experience in orthopaedic surgery obtained in the United States *must* be in programs approved by the Residency Review Committee for Orthopaedic Surgery and accredited by the Liaison Committee on Graduate Medical Education. All other educational experience obtained in the United States *must* be in programs accredited by the Liaison Committee on Graduate Medical Education and approved by the appropriate Residency Review Committee for the category of education for which credit is sought. (See list of approved services in the Directory of Residency Training Programs accredited by the Liaison Committee on Graduate Medical Education.)

The educational experience obtained in Canada *must* be taken in services approved by the Royal College of Physicians and Surgeons of Canada for education in orthopaedic surgery and *must* include a minimum of three years as a resident in orthopaedic surgery as outlined in Minimum Educational Requirements for Board Certification, c., effective with those applicants who began the orthopaedic surgery portion of their training on July 1, 1979 and thereafter.

The Board also accepts educational experience obtained in programs approved by the appropriate organization in countries with which the Board has entered into reciprocity agreements, subject to individual review. (See Requirements for Examination 9.)

Requirements for Examination

In order to be declared eligible for the examination an applicant must meet the following requirements:

1. Satisfactory completion of the minimal educational requirements as listed in preceding Section.
2. For those who took orthopaedic training in the United States, receipt in the board office of the completed Record of Residency Assignments form from the Director of the training program stipulating the number of years of orthopaedic education that have been satisfactorily completed by the candidate.
3. A full and unrestricted license to practice medicine in the United States or Canada, or full time service in the federal government, which customarily does not require licensure. (Special provisions detailed later permit foreign graduates who are returning to their homelands to practice orthopaedic surgery to qualify in lieu of licensure in the United States or Canada).
4. After completion of formal training, an applicant is required to be actively engaged in professional activities restricted to orthopaedic surgery, *other than participation in a training program as a resident or fellow*, for at least twelve months in one locality prior to the examination. He/she must thereby demonstrate his/her professional proficiency and his/her adherence to acceptable ethical and professional standards. Such qualifications will be determined by the Committee on Eligibility after review of the application, letters of recommendation and other data pertaining to these matters. Representatives of the Board may visit a community in order to evaluate the work of an applicant.
5. An applicant declared ineligible by the Committee on

Eligibility will be informed of the basis of such action and may be afforded a hearing by the Appeals Committee of The American Board of Orthopaedic Surgery, if requested.

6. An applicant in military service must have been assigned as an orthopaedic surgeon in a hospital setting for one full year to fulfill the practice requirement, unless the Committee on Eligibility rules otherwise.

7. An applicant must be prepared to submit as a part of the application to the Committee on Eligibility; if requested, a list of all patients admitted to the applicant's care in the hospital or hospitals in which the applicant has practiced prior to the filing of the application. Such a list shall include the name of the hospital, the hospital number for each patient, the patient's age, definitive diagnosis, the treatment, the end result and the period of time covered. The authenticity of the patient list must be certified by the hospital administrator or record librarian. An applicant engaged in practice in a partnership or assigned full time in a private or governmental hospital must, upon request, submit a list of patients cared for primarily by the applicant. This list must also be certified by the hospital administrator or record librarian.

8. An applicant practicing in Canada is required to have fulfilled the requirements of The American Board of Orthopaedic Surgery and to have passed the qualifying examinations in orthopaedic surgery of the Royal College of Physicians and Surgeons of Canada before applying for the examination of The American Board of Orthopaedic Surgery unless three or more years of the required approved orthopaedic surgery education have been obtained in the United States.

9. An applicant originating in a country with which The American Board of Orthopaedic Surgery has a reciprocal educational credit agreement and which requires other qualifying examinations shall be considered only after consultation between The American Board of Orthopaedic Surgery and the appropriate orthopaedic organization in the country in which the applicant has had orthopaedic surgery education.*

*United Kingdom	Australia
South Africa	New Zealand

The date, place and deadline for submission of applications and fees for the examination are announced in the Journal of the American Medical Association, in the Journal of Bone and Joint Surgery, and in the Bulletin of the American Academy of Orthopaedic Surgeons.

Procedure for Application

1. A completed application for examination must be post-marked on or before December 31st the year preceding the examination. *The application must be accompanied by a nonrefundable fee of \$100.00 and must be sent by registered mail.*

2. An application remains in force for three years unless a new application is requested by the Board. A new application must be completed if the candidate does not successfully pass the examination within a three-year period. If a candidate does not take the examination after being declared eligible, the applicant will not be considered for any future examination during the three-year term of the application unless a written request for reconsideration and a reapplication fee of \$100.00 are submitted to the Board office. *These must be postmarked on or before December 31st the year preceding the examination for which reconsideration is being requested and must be sent by registered mail.*

3. It is the responsibility of the applicant to keep the Board office informed of any change of address. If an applicant changes practice location, new references will be solicited by the Board.

4. The decision of the Committee on Eligibility is mailed to the applicant no later than 60 days prior to the examination date.

5. The candidate must submit a fee of \$600.00 on or before the date specified in the letter of notification of eligibility for the examination. The fee will be forfeited if the can-

didate fails to appear for the examination or cancels after being scheduled. *This fee must be sent by registered mail.*

6. If it is determined that an applicant has falsified information in the application form, the applicant will not be considered for eligibility for the examination and must wait a period of three years before being allowed to file a new application. The applicant will not be considered for eligibility during the three-year interim.

Period of Board Eligibility

The Committee on Eligibility meets each year to consider applications for the certifying examination. At this meeting, an applicant will be declared eligible or noneligible for the next examination. If declared eligible, a candidate is considered board eligible only for the period of time (usually not longer than three months) until the next examination is administered. Those candidates who elect not to take the examination, and those who do not pass may apply for the next scheduled examination by submitting a \$100.00 reactivation fee and a written request for reconsideration for examination before the deadline of December 31st the year preceding the examination for which reconsideration is being requested. (See Unsuccessful Candidates.) Eligibility for that examination will not be considered until the Committee on Eligibility again meets, usually in May. Eligibility does not carry over automatically from year to year.

Scope of the Examination

The examination shall be comprehensive in all aspects of orthopaedic surgery as defined in the introduction.

Certification by the American Board of Orthopaedic Surgery

1. The American Board of Orthopaedic Surgery awards a Certificate to a candidate who confines his/her professional activity to orthopaedic surgery, who is acceptable on the basis of his/her demonstrated proficiency in orthopaedic surgery and adherence to ethical and professional standards, and who passes the certifying examination. This portion of the Board's responsibility is discharged by issuance of a Certificate to an individual found qualified as of the date of certification.

2. A Certificate may be revoked because of (1) intentional and substantive misrepresentation to the Board respecting the applicant's education and other requirements for eligibility, or (2) because of suspension or termination of the right to practice medicine in any State, Province or Country by reason of a violation of a medical practice act or other statute or governmental regulation.

3. Before the revocation of a Certificate is carried out the Diplomate will be informed of the basis of such action and will be afforded a hearing following procedures as formulated by the American Board of Orthopaedic Surgery.

4. Should the circumstances which were considered in justification for revocation or surrender of the Diplomate's Certificate be corrected, the board may subsequently reinstate the Certificate after appropriate review of the individual's qualifications and performance, using the same standards as for other applicants for certification.

Unsuccessful Candidates

Unsuccessful candidates may be permitted to repeat the examination on the following basis:

1. The Committee on Eligibility will consider applicants for re-examination upon receipt of a written request for reconsideration and a fee of \$100.00 to reactivate the application. *The written request and the fee of \$100.00 must be postmarked on or before December 31st the year preceding the examination for which reconsideration is being requested, and must be sent by registered mail.* Upon receipt of notification of acceptance by the Committee on Eligibility for a repeat examination the candidate will submit to the Board a fee of \$600.00 on or before the date specified in the letter of notification of eligibility for the examination. *All applications, requests and fees must be sent by registered mail.*

Otolaryngology

2. Each applicant's application must again be approved by the Committee on Eligibility and a new application may be requested. (See Procedure for Application.) Eligibility does not carry over automatically from year to year.

3. It is the responsibility of the applicant to keep the Board office informed of any change of address. If an applicant changes practice location, new references will be solicited by the Board.

Foreign Practitioners

The following regulations apply to physicians who intend to practice in a country other than the United States or Canada. (This provision will be eliminated September 5, 1980.)

1. An applicant who has completed the required education and is returning immediately to a foreign country to practice may, at the discretion of the American Board of Orthopaedic Surgery, be accepted for the next scheduled examination and, if successful, will be issued a Certificate.

2. Such an applicant must meet all of the requirements for the examination with the exception of that pertaining to practice. Applicants who do not meet the licensure requirements must hold a certificate of the Educational Commission for Foreign Medical Graduates.

3. The Committee on Eligibility may require the presentation of documents, either in original form or sworn and notarized translation, which substantiate an applicant's claims and allegations.

4. Each applicant must make a sworn statement that his/her application for a Certificate is based upon his/her intention, without mental reservation, to return to practice in a specified foreign country. He/she will also pledge that should he/she return to practice in the United States or Canada he/she will surrender his Certificate and agree to have his/her name removed from the list of Diplomates until he/she has met the practice requirement of the American Board of Orthopaedic Surgery. A contract incorporating these points is available from the Board office.

5. Application and examination fees are the same as those required from applicants from the United States and Canada and are payable in the currency of the United States of America.

6. Examinations are the same as those given to candidates from the United States and Canada.

Military Service

Medical officers who have elected service in the military forces as their life career may apply for certification on the same basis as physicians in civilian practice. The practice requirement may be met by hospital assignments in which their duties are limited to the practice of orthopaedic surgery.

Approved Orthopaedic Surgery Residencies

1. Education in orthopaedic surgery in the United States must be obtained in institutions approved for graduate education in orthopaedic surgery by the Residency Review Committee for Orthopaedic Surgery and accredited by the Liaison Committee on Graduate Medical Education. The Residency Review Committee consists of representatives of the American Board of Orthopaedic Surgery, the Council on Medical Education of the American Medical Association and the American Academy of Orthopaedic Surgeons. A list of approved institutions is published annually in the Directory of Accredited Residency Training Programs Accredited by the Liaison Committee on Graduate Medical Education and is obtainable from the American Medical Association, at 535 North Dearborn Street, Chicago, Illinois 60610.

2. Credit for time spent in institutional residency education will be granted only for the period the institutions are on the approved list. (Credit may be given from the start of the resident's education period if the institution becomes approved during the time the resident is under contract at such institution.)

3. A resident engaged in residency education in an institution which becomes disapproved in whole or in part will

receive credit for the usual contract year but no longer than 18 months from the effective date of withdrawal of approval.

4. The term "fellow" is considered synonymous with "resident" and is recognized by the Board only if the position occupied and the work performed by the former are in all respects equal to those of the latter. The total number of residents and fellows engaged in residency education for credit must not exceed the number approved by the Residency Review Committee for Orthopaedic Surgery for a given program.

5. With the exception of children's orthopaedics, which must be taken in an institution specifically approved for such training, any program has the option of using facilities of institutions nor individually approved for residency education in orthopaedic surgery, provided:

A. that the period of residency education in an unapproved facility is for a period no longer than six months;

B. that in the category of education for which this type of education is presented for credit, at least half of the minimum required time is spent in an approved institution.

6. The education of a resident should show that graduated responsibility is developed under controlled, supervised conditions. The American Board of Orthopaedic Surgery looks with disfavor on fragmented training from one program to another unless there is evidence of graduated and increasing responsibility under such controlled and supervised conditions.

7. Residents may not engage in private practice without the approval of the program director.

Note: The Residency Review Committee for Orthopaedic Surgery will periodically inspect and approve every hospital used for education by a given program. Hospitals giving more than six months of approved education may be listed in the Directory of Residency Training Programs.

AMERICAN BOARD OF OTOLARYNGOLOGY

George A. Sisson, President, Chicago
 Brian F. McCabe, Vice President, Iowa City, Iowa
 George F. Reed, Secretary-Treasurer, Designate, Syracuse, New York
 Bobby R. Alford, Houston, Texas
 Byron J. Bailey, Galveston, Texas
 Roger Boles, San Francisco
 Wesley H. Bradley, Albany, New York
 Douglas P. Bryce, Toronto, Canada
 Robert W. Cantrell, Charlottesville, Virginia
 Patrick J. Doyle, Vancouver, Canada
 Robert I. Kohut, Winston-Salem, North Carolina
 Joseph H. Ogura, St. Louis
 Michael M. Paparella, Minneapolis
 Loring W. Pratt, Waterville, Maine
 Frank N. Ritter, Ann Arbor, Michigan
 William H. Saunders, Columbus, Ohio
 Emanuel M. Skolnik, Chicago
 James B. Snow, Jr., Philadelphia
 Burton J. Soboroff, Chicago
 Francis A. Sooy, San Francisco
 M. Stuart Strong, Boston
 Harold G. Tabb, New Orleans
 M. Eugene Tardy, Jr., Chicago
 Paul H. Ward, Los Angeles
 Walter P. Work, Secretary-Treasurer
 220 Collingwood, Suite 130,
 Ann Arbor, Michigan 48103

General Requirements

The following qualifications are minimal requirements for examination by the American Board of Otolaryngology. The applicant:

1. Shall possess high moral, ethical and professional qualifications.

2. Shall be a graduate of a College of Medicine or Osteopathy.

3. Is not required to serve an internship.

4. Shall present evidence of a valid license to practice medicine in the United States or Canada. If the applicant is enrolled in a training program in a state not requiring licensure as a prerequisite to such enrollment, evidence of licensure shall not be required.

5. Whose post-MD training began prior to July 1, 1981 must have satisfactorily completed four years of residency training including one year of general surgery and three years of otolaryngology in a manner acceptable to the head of that residency program.

6. Whose post-MD training begins July 1, 1981 or thereafter must have satisfactorily completed a minimum of five years of residency training which must include at least one year of general surgical training in a program approved by the Conference Committee for Graduate Education in Surgery (Residency Review Committee for Surgery) or the appropriate Canadian medical authority and at least three years of training in otolaryngology in a program approved by the Residency Review Committee for Otolaryngology or the appropriate Canadian medical authority. The training in otolaryngology must involve increasing responsibility each year and include a final year of senior experience. It is preferred that the year or years of general surgical residency be taken prior to the otolaryngologic training, but it/they may not be taken following the otolaryngologic training.

7. Who has received some or all premedical and/or medical training in a country other than the United States or Canada and an additional approved residency in otolaryngology in the United States or Canada, including the year of general surgery, is eligible for examination provided he meets all other requirements of the Board.

8. Who has received residency training outside the United States or Canada will be considered on an individual basis.

9. Who does not meet these stated requirements will not be accepted for Board examination unless special circumstances indicate review by the Board.

10. Shall not receive credit for education obtained in the Armed Forces unless such education is obtained in an approved residency program.

Application for Examination

There is no required time interval between completion of the residency program and making application for examination.

1. An applicant for examination shall complete and submit the application forms supplied by the Executive Secretary-Treasurer of the Board. The application shall include authenticated records of the following: medical education, internship, residencies and other postgraduate studies, hospital and outpatient department appointments, teaching positions, memberships in medical societies, personal publications, and any additional information that the candidate feels might be of value in processing this application.

2. Additional information may be requested by the Board from the following:

- (a) Local medical society.
- (b) Board certified otolaryngologists from the geographical area in which the applicant practices.
- (c) The director of the applicant's training program, as the application must include an evaluation form filled out and signed by the Director of the residency program.
- (d) Hospital chiefs of staff.

3. The application shall be signed by two diplomates of the American Board of Otolaryngology. It shall be accompanied by (a) two 4-inch by 3½-inch unmounted, dated photographs taken within six months of the date of application, signed by the applicant on the front; (b) a list of operations assisted in and performed by the resident during the period of education in otolaryngology; (c) official verification of the surgical and otolaryngology residency training; (d) the application fee.

4. The completed application with an up-to-date or completed surgical list shall be mailed to the Secretary-Treasurer

as soon as possible and before May 1st of each year. This allows review of the application by the Credentials Committee and the usual assignment of the applicant for the next examination. An update of this operative list must be submitted to the American Board of Otolaryngology within ten (10) days of completion of the applicant's residency training. An applicant will be notified by the Secretary-Treasurer when and where to appear for examination if approved by the Credentials Committee.

5. In 1980 a written examination will be offered in September and an oral examination in February of 1981. Those examinees who neither pass nor fail on the written examination alone will be considered candidates for the oral examination and will be required to take the oral examination within two years of taking the written examination. Dates for subsequent yearly examinations will be announced periodically.

6. The American Board of Otolaryngology does not recognize or use the term "Board Eligible" in any manner including requests to the Board for status reports.

7. An application will be considered current for a two-year period following its acceptance. At the conclusion of said two-year period, the application will expire.

8. The Board reserves the right to reject any application.

Fee for Examination

The fee for the examination is \$800.00 subject to change at the discretion of the Board. Of this sum, an application fee of \$300.00 must accompany the application and is not refundable. No application will be processed until this fee is received by the Secretary-Treasurer of the Board. An examination fee of \$500.00 must be remitted to the Secretary-Treasurer immediately upon notification of acceptance for initial examination. Once the applicant has agreed in writing to the date of the examination offered by the Board, no part of this \$500.00 is refundable.

The order in which candidates are accepted for examination is at the discretion of the Board.

Examination Procedures

The date and location of the examinations are determined by the Board. Advance notices of the date and location of the examinations are published in the Journal of the American Medical Association and journals devoted to specialty of otolaryngology. The examination format now consists of oral and written examinations.

The purpose of the examination is to determine the candidate's knowledge, skill and understanding in the following categories:

1. Morphology, physiology, pharmacology, pathology, microbiology, biochemistry, genetics, immunology, allergy and neurology relevant to the head and neck; the air and food passages; the communication sciences, including a working knowledge of audiology and speech; the endocrine disorders as they relate to otolaryngology.

2. The recognition and management of congenital anomalies, abnormal function, trauma and disease in the regions and systems enumerated in item 1 above.

3. The recognition and medical management of diseases and abnormality of function of the ears, upper and lower respiratory tract and food passages.

4. The recognition, technique and surgical management of congenital, inflammatory, neoplastic and traumatic states, including among others:

- (a) Temporal bone surgery.
- (b) Paranasal sinus and nasal septum surgery.
- (c) Maxillofacial, plastic and reconstructive surgery of the head and neck.
- (d) Surgery of the salivary glands.
- (e) Head and neck oncologic surgery.
- (f) Head and neck reconstructive surgery, particularly as it relates to the restoration of function in congenital anomalies, following extensive surgery and complications of head and neck trauma.
- (g) Peroral endoscopy, both diagnostic and therapeutic.
- (h) Surgery of the lymphatic tissues of the pharynx.

Pathology

(i) Pre-and post-operative care.

5. Diagnosis and diagnostic methods including related laboratory procedures.

6. Diagnostic and therapeutic radiology, including the interpretation of roentgenograms of the nose; accessory sinuses, salivary glands, temporal bone, skull, neck, larynx, lungs and esophagus.

7. Awareness of the current literature, especially pertaining to the areas mentioned in item 1 above.

8. Awareness of the habilitation and rehabilitation techniques and procedures pertaining to otolaryngology.

Request for Re-examination

An unsuccessful candidate may request permission by letter for re-examination. If such permission is requested by a candidate whose application is still current (see APPLICATION FOR EXAMINATION), a re-examination fee of \$500.00 must accompany such request for re-examination. If such application has expired, a candidate must make a new application and pay the required \$300.00 application fee and \$500.00 examination fee. All requests and applications must be made before May 1st in the year in which re-examination is sought.

Certification by the Board

A certificate is granted by The American Board of Otolaryngology to a candidate who has met all the requirements and has satisfactorily passed its examination. The fee for this certificate is thirty dollars (\$30.00).

Article VI—By-Laws Certification, Rejection and Revocation

1. The Board shall issue an appropriate certificate of qualification in otolaryngology (or in a subdivision thereof) to those who show themselves worthy of such certification according to the requirements of training, experience and demonstrated competence as stated in the current Information Booklet of the Board.

2. No certificate shall be issued and any certificate issued by the Board shall be subject to revocation at any time by the Board if it shall determine that the person involved:

- (a) did not possess the required qualifications and requirements for examination whether or not such deficiency was known to the Board or any member thereof or could have been ascertained by the Board prior to examination or at the time of the issuance of a certificate as the case may be.
- (b) made a material misstatement or withheld information in his application or any other representation to the Board or any Committee thereof, whether intentional or unintentional.
- (c) has been convicted by a court of competent jurisdiction of any felony or misdemeanor involving moral turpitude and, in the opinion of the Board, having a material relationship to the practice of medicine.
- (d) had his license to practice medicine revoked or shall have been disciplined or censured by any court or other body having proper jurisdiction and authority because of any act or omission arising from the practice of medicine.

3. If the Board determines to withhold or revoke any certificate for any reason set forth in section 1 and section 2 above, the person affected thereby shall be given written notice of the reasons therefor. Such action by the Board shall be regarded as final unless such person requests a review of such action within sixty days after notice thereof has been mailed to him by the Board.

Applicant's Agreement

Applicants are required to sign the following statement:

I hereby apply to the American Board of Otolaryngology for examination for certification in accordance with its rules, regulations and policies, and herewith enclose the fee of \$300.00 for processing this application, none of which is refundable. I shall pay the remaining \$500.00 of the total fee

of \$800.00 if and when accepted for examination and agree that this \$500.00 is not refundable. I agree that prior to or subsequent to my examination, the Board may investigate my standing as a physician including my reputation for complying with the ethical standards of the profession. Furthermore, if the Board refuses to grant a certificate, such refusal may not and shall not be questioned by me in any court of law or equity, or any other tribunal.

AMERICAN BOARD OF PATHOLOGY

Vernie A. Stenbridge, President, Dallas, Texas
 Harry W. McFadden, Jr., Vice President, Omaha, Nebraska
 Jack M. Layton, Secretary, Tucson, Arizona
 William J. Reals, Treasurer, Wichita, Kansas,
 Ellis S. Benson, Minneapolis, Minnesota
 Merle W. Delmer, San Antonio, Texas
 Russell S. Fisher, Baltimore, Maryland
 Robert B. Jennings, Durham, North Carolina
 William W. McLendon, Chapel Hill, North Carolina
 Douglas A. Nelson, Syracuse, New York
 Jerald R. Schenken, Omaha, Nebraska
 Jack P. Strong, New Orleans, Louisiana
 M. R. Abell, Executive Director, Tampa, Florida
 Office Of The American Board Of Pathology,
 (Mrs.) Edith C. Smith, Administrative Assistant,
 112 Lincoln Center, 5401 West Kennedy Boulevard
 P.O. Box 24695, Tampa, Florida 33623

Prerequisites for Examination

All applications to take the examination are considered by the Credentials Committee of The American Board of Pathology (ABP) and the following items are evaluated in this process.

I. General

- 1. The candidate must hold a currently valid, full and unrestricted license to practice medicine, or osteopathy.
- 2. The candidate must devote professional time principally and primarily to pathology.

II. Professional Education

- 1. Graduation from a medical school in the United States or Canada accredited by the Liaison Committee on Medical Education, graduation from an osteopathic college of medicine accredited by the American Osteopathic Association, or graduation from a medical school in another country acceptable to the ABP.
- 2. For those who have not graduated from an accredited medical school in the United States or Canada or an accredited osteopathic college of medicine in the United States, certification by the Educational Council for Foreign Medical Graduates is required or successful completion of the "fifth pathway" as described and approved by the Council on Medical Education of the American Medical Association.

III. Qualifications

The American Board of Pathology recognizes several pathways to qualification for examination and certification, including training, experience, or a combination of training and experience. To acknowledge the diverse activities in the practice of pathology and to accommodate the interests of individuals wishing to enter the field, The American Board of Pathology offers basic certification through one of three routes (combined anatomic and clinical pathology, anatomic pathology only, or clinical pathology only) and a variety of special competence examinations. It is intended that the basic certifying examination is to establish competence to practice whereas the special competence examinations are utilized to indicate expertise in one segment of anatomic or clinical pathology.

A. Basic certificates

- 1. **Training**—the candidate must complete satisfactorily pathology training in a program accredited by the

Liaison Committee on Graduate Medical Education LCGME, as outlined below.

- a. **Combined anatomic and clinical pathology (AP/CP) certification**—two full years of approved training in anatomic pathology and two full years of approved training in clinical pathology.
 - b. **Anatomic pathology (AP) certification**
 - (1) Three full years of approved training in anatomic pathology and one additional year which may be spent in further training or research in pathology or closely allied disciplines, in the practice of pathology, or in approved graduate medical education in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice.
 - or
 - (2) Basic certificate in clinical pathology and two full years of approved training in anatomic pathology. (Dual credit is not given for AP training which was used to qualify for CP certification.)
 - c. **Clinical pathology (CP) certification**
 - (1) Three full years of approved training in clinical pathology and one additional year which may be spent in further training or research in pathology or closely allied disciplines, in the practice of pathology, or in approved graduate medical education in internal medicine, surgery, obstetrics and gynecology, pediatrics, or family practice.
 - or
 - (2) Basic certificate in anatomic pathology and two full years of approved training in clinical pathology. (Dual credit is not given for CP training which was used to qualify for AP certification.)
2. **Experience**—under certain circumstances a candidate may receive credit toward a basic certificate for acceptable experience in the specialty rather than by training. One year's credit may be received for each two years of acceptable experience. However, only under exceptional circumstances will experience credit be given toward combined anatomic and clinical pathology certification. The substitution of experience credit for a portion of approved training toward the requirements for AP/CP requires the assessment of the director of the training program to insure that such will permit a broad and adequate experience in anatomic and clinical pathology and that the director will be willing to so certify.
- Credit for extensive full-time training or experience in a country other than the United States of America or Canada may be granted toward the requirements for a basic certificate provided that the candidate has had a total of eight years of full-time validated experience in pathology acceptable to The American Board of Pathology with four years having been in the United States or Canada. For AP qualification the required training and/or experience must have been in AP, for CP in CP and for combined APCP, equally divided between AP and CP.
3. **Other credit mechanisms**—the acceptability of other credits as substitutes for approved training is evaluated on an individual basis. The total combined period of credit allowed in this category for sections a, b and c below will not exceed 12 months.
- To avoid any misunderstanding, potential applicants should communicate with the Office of The American Board of Pathology early in the training period to ascertain if credit may be acceptable. *The training program director* will be asked to assess the proposal and to provide a recommendation.
- The Board will notify the director of the pathology training program of such potential credit and, prior to

admission to the certifying examination, the director of the final year of training must certify that the candidate is fully qualified to sit for the examination.

- a. **Training during medical school**—credit towards the qualifications for the basic examinations in pathology may be given for training in an approved pathology training program during medical school providing that the candidate did not receive credit for such towards graduation from medical school and that it is validated as a significant experience by the training director of the department of pathology.
- b. A fellowship or instructorship in a preclinical department of a medical school may qualify for credit if, in the opinion of the ABP, the experience was applicable to pathology.
- c. Candidates holding a master's degree or a doctor's degree in a special discipline of pathology or a basic science related to pathology may obtain credit regardless of whether it was received before or after the medical degree. The evaluation and approval of the amount of time credit will depend on an assessment by the ABP regarding relevance of the subjects covered and upon a recommendation from the training director for pathology.
- d. Research with a *direct application* to the practice of anatomic and/or clinical pathology may be considered for credit not to exceed one-third of the training time requirement. The ABP encourages research and believes that all candidates should carry on investigation, teaching, and publication of scientific papers during training.
- e. The ABP will allow full training credit for the first year of graduate medical education (internship) approved as a categorical program in pathology. The ABP will also accept for credit that portion of an approved diversified (flexible, transitional) first year program which was spent in pathology.
- f. The ABP will allow training credit for time spent in a related clinical activity. The evaluation and approval of the amount of credit will depend on an assessment by the ABP and the pathology training director with regard to relevance of the experience.

B. Special Competence Certificates

All candidates applying for special competence certification after 1 July 1983 must hold a basic (primary) certificate from the ABP or from another primary board of the American Board of Medical Specialties.

1. Blood Banking

- a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:
 - (1) One year of additional supervised training in an institution accredited for training by the LCGME, or approved for such training by the ABP, or
 - (2) Two additional years of full-time experience in blood banking or its equivalence, under circumstances satisfactory to the ABP.
- b. Applicants not holding a basic certificate from the ABP but holding a basic certificate from another primary Board:
 - Two years of training or acceptable experience in blood banking. Appropriate training or experience in another medical specialty may be substituted for one of the two years.

2. Chemical Pathology

- a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:
 - (1) One year of additional supervised training in an institution accredited for training in chemical pathology by the LCGME, or approved for such training by the ABP, or

Pathology

- (2) Two additional years of full-time experience in chemical pathology or its equivalence, under circumstances satisfactory to the ABP.
- b. Applicants not holding a basic certificate from the ABP but holding a basic certificate from another primary Board:
- Two years of training or acceptable experience in chemical pathology. Appropriate training or experience in another medical specialty may be substituted for one of the two years.
- c. The ABP, at its discretion, may admit candidates to examination if the following conditions have been met as of July 1, 1972: that the candidate has been practicing chemical pathology for five years in a senior position in an institution acceptable to the ABP.

3. Dermatopathology

Certification in dermatopathology is a joint and equal function of the American Board of pathology (ABP) and the American Board of Dermatology (ABD). Such function will relate to qualifications of candidates, standards of examination, and the form of the certificate.

a. Prerequisites

The American Boards of Dermatology and Pathology will admit candidates to examination for certificates of special competence in dermatopathology who are otherwise qualified and who have had one of the following types of training or experience.

- (1) Applicants already holding a basic certificate from the American Board of Dermatology or The American Board of Pathology (anatomic pathology, or anatomic and clinical pathology) and two years of experience in dermatopathology in a position acceptable to the Committee for Dermatopathology. The training requirements for basic certification must have been completed before 31 December 1977 and the two years of acceptable experience must have been completed before 31 December 1979. The final expiration date for applications under this prerequisite is 31 December 1981.
- (2) Applicants who are diplomates of both the American Board of Dermatology and The American Board of Pathology.
- (3) Applicants already holding a basic certificate from the American Board of Dermatology or The American Board of Pathology (anatomic pathology, or anatomic and clinical pathology) and one or two additional years of training in dermatopathology in a program accredited for such training by the Liaison Committee on Graduate Medical Education.

b. Training

Training programs in dermatopathology will be an equal and joint function of the Departments of Dermatology and Pathology. The pathologist applicant shall have spent one-half time of the required training time of the one year program in clinical dermatology and the dermatology applicant shall have spent one-half time of the one year program in general anatomic pathology.

- c. The qualification to take the dermatopathology examination is for a three year period. If the candidate has not passed the examination during this three year period, a second three year period of board qualification will be considered upon evidence from the Director of a training program that the candidate has obtained additional training acceptable to the Committee for Dermatopathology.

Committee for Dermatopathology:

Robert W. Goltz, Minneapolis, Minnesota
James H. Graham, Washington, D.C.
Jack M. Layton, Tucson, Arizona
Vernie A. Stembridge, Dallas, Texas
Richard B. Stoughton, San Diego, California
Jack P. Strong, New Orleans, Louisiana

Candidates may obtain an application as follows:

Pathologists— Dr. M.D. Abell
Executive Director
American Board of Pathology
112 Lincoln Center
5401 West Kennedy Boulevard
P.O. Box 24695
Tampa, Florida 33623

Dermatologists— Dr. Clarence S. Livingood
Executive Director
American Board of
Dermatology
Henry Ford Hospital
2799 West Grand Boulevard
Detroit, Michigan 48202

4. Forensic Pathology

- a. Applicants holding a certificate in anatomic and clinical pathology, or anatomic pathology only, or in special instances, clinical pathology only—one year of supervised training in forensic pathology in an institution accredited for such training by the LCGME, or approved for training by the ABP.
- b. For candidates in anatomic pathology and forensic pathology—two years of approved training in anatomic pathology and two years of approved training in forensic pathology in an institution accredited for such training by the LCGME.
- c. For candidates holding a certificate in anatomic pathology only, or in exceptional instances, clinical pathology only—two years of full-time experience in forensic pathology in a situation comparable to that of an institution accredited for training in forensic pathology by the LCGME.

5. Hematology

- a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only or in special instances, anatomic pathology only:
- (1) One full year of additional supervised training in an institution accredited for hematology training by the LCGME, or approved for such training by the ABP, or
 - (2) Two additional years of full-time experience in hematology or its equivalence, under circumstances satisfactory to the ABP.
- b. Applicants not holding a basic certificate from the ABP but holding a basic certificate from another primary Board:
- Two years of training or acceptable experience in hematology. Appropriate training or experience in another medical specialty may be substituted for one of the two years.
- c. The ABP, at its discretion, may admit candidates to examination if the following conditions have been met as of July 1, 1972: that the candidate has been practicing hematology for five years in a senior position in an institution acceptable to the ABP.

6. Medical Microbiology

- a. Applicants who hold a certificate in anatomic and clinical pathology, or clinical pathology only:
- (1) One full year of additional supervised training in medical microbiology in an institution accredited for such training by the LCGME, or approved for such training by the ABP, or
 - (2) Two additional years of full-time experience in medical microbiology, or its equivalence, under circumstances satisfactory to the ABP.

- b. Applicants not holding a basic certificate from the ABP but holding a basic certificate from another primary Board:
Two years of training or acceptable experience in medical microbiology. Appropriate training or experience in another medical specialty may be substituted for one of the two years.
- c. The ABP, at its discretion, may admit candidates to examination if the following conditions have been met as of July 1, 1972: that the candidate has been practicing medical microbiology for five years in a senior position in an institution acceptable to the ABP.
7. **Neuropathology**
- a. For those applicants holding a certificate in anatomic and clinical pathology, or anatomic pathology only—two full years of supervised training in neuropathology in an institution accredited for training by the LCGME, or approved for training by the ABP.
- b. For certification in anatomic pathology and neuropathology—two full years of approved training in anatomic pathology and two full years of approved training in neuropathology, with adequate experience in diagnostic neuropathology.
- c. For certification in neuropathology only:
- (1) one year of approved training in anatomic pathology, and
 - (2) two full years of approved training in neuropathology, with adequate experience in diagnostic neuropathology, and
 - (3) a fourth year which may be spent in an approved training program or research related to neurological science, approved training in neuropathology, or the practice of neuropathology acceptable to the ABP.
8. **Radioisotopic Pathology**
The ABP will consider candidates for examination who are otherwise qualified and who have had one of the following types of training:
- a. Applicants holding a basic certificate from the ABP—one additional year of training in radioisotopic pathology in a program accredited for such training by the LCGME or approved for such training by the ABP.
- b. Applicants for certification in clinical pathology and radioisotopic pathology—24 months of approved training in clinical pathology, 12 months of approved training in radioisotopic pathology, and 12 months of further training, research, or practice related to clinical pathology.
- c. Prior to January 1, 1981 the ABP, at its discretion, may admit candidates to examination if the following conditions have been met: that the candidate has a basic certificate from the ABP and has had two years, or its equivalence, of full-time experience in radioisotopic pathology in a position acceptable to the ABP.
- C. **Certificate Combinations**
Under certain circumstances special competence training may be arranged in conjunction with the basic training requirements, permitting a candidate to qualify for a combined certificate. However, dual credit is not acceptable, i.e., training in an area of special competence as part of the qualification toward a basic certificate is not acceptable as credit for special competence qualification. The recognized combinations of certification and the required training are:
- a. **Anatomic pathology and clinical pathology (AP/CP) plus special competence**—four years of approved AP/CP training in a program accredited for such training by the LCGME plus one or two years of special competence training as defined in Section III B "Special competence certificates."
- b. **Anatomic pathology (AP) plus special competence**—three years of approved training in anatomic pathology in a program accredited for such training by the LCGME plus one year of approved special competence training in forensic pathology, dermatopathology, radioisotopic pathology, or in very special circumstances, other areas of special competence.
- c. **Clinical pathology (CP) plus special competence**—three years of approved training in clinical pathology in a program accredited for such training by the LCGME plus one year of approved special competence training as defined in Section III B "Special competence certificates,"
or
two years of approved clinical pathology training in a program accredited for such training by the LCGME plus two years of approved special competence training as defined in Section III B "special competence certificates."
- d. **Anatomic pathology and forensic pathology (AP/FP)**—two years of approved training in anatomic pathology and two years of approved training in forensic pathology in a program accredited for such training by the LCGME.
- e. **Anatomic pathology and neuropathology (AP/NP)**—two years of approved training in anatomic pathology and two years of approved training in neuropathology in a program accredited for such training by the LCGME.
- D. **Qualification for Special Competence for Those Not Holding a Basic Certificate in Pathology or a Basic Certificate From Another Primary Board of ABMS**
- a. Three years of training in an area of special competence in an institution accredited for such training by the LCGME, or approved for such training by the ABP, and
an additional year which may be spent either in supervised training, research, or practice in the area of special competence in circumstances satisfactory to the ABP.
- b. The final expiration date for applications on the basis of these prerequisites terminates 1 July 1983.

Qualification for Examination

The ABP will permit a candidate who has qualified on the basis of approved training and/or experience to sit for examination during the three year period after being declared qualified to take the examination. When this period has expired, additional periods of qualification will be permitted upon documented evidence that the candidate has obtained further training or experience after termination of the period of qualification in the form of an additional year of approved training in an accredited program or two years of experience acceptable to the ABP.

Application Blank and Fee

Application must be made on the special form which may be obtained from the ABP Office and forwarded with other required credentials and the application-examination fee. An application cannot be given consideration unless it is accompanied by the application-examination fee.

The final date for filing an application for the spring examination of each year is 1 February of that year and for the fall examination, 1 August of that year. The application must be received in the Board Office by these dates.

The application-examination fee is five hundred fifty dollars (\$550), and includes a nonrefundable processing fee of \$50. If the candidate fails in the examination, admission to a second examination is permitted after six months but any re-examination must occur within the three year period of qualification described in the preceding paragraph. The applicant must pay an additional fee of five hundred fifty dollars (\$550) before a second examination will be given. After a candidate's application has been approved for an examination, there is a

Pediatrics

transfer fee of fifty dollars (\$50) if a request is received to transfer to the following examination.

A cut-off date for cancellation of an appearance at an examination has been established and each candidate is so notified when the receipt of an application is acknowledged. If a candidate cancels an examination after the established date, the entire examination fee is forfeited.

Examinations

Examinations are held at the discretion of the Board. The basic examinations are generally conducted twice annually in May and November. The tentative schedules for forthcoming examinations are:

Anatomic and clinical pathology examinations—

10, 11, 12 November, 1980—Miami Beach

27, 28, 29 May, 1981—Chicago

19, 20, 21 November, 1981—New Orleans

Examinations for special competence are usually held in May of each year, however, dermatopathology is scheduled separately at a time and place mutually agreed upon by The American Board of Pathology and the American Board of Dermatology.

Examinations for special competence—

26 May, 1981—Chicago

Dermatopathology examination—

13 November, 1980—Miami Beach

3 November, 1981—Chicago

Issuance of Certificate

Upon satisfactorily passing the appropriate examination(s), a candidate will be issued a certificate by the ABP in those fields of pathology for which the ABP accepted the credentials. Thus, a candidate who is qualified for the combined examination in anatomic and clinical pathology, having fulfilled the minimum requirements of 24 months of approved training in anatomic pathology and 24 months of approved training in clinical pathology, will receive a certificate only after both parts (anatomic and clinical pathology) of the examination have been passed.

Similarly, candidates qualified for examination in anatomic or clinical pathology, and an area of special competence, and claiming qualification on the basis of two years of approved training in each area, will receive a certificate only after both parts of the examination have been passed.

The two parts may be taken at one session or at separate sessions within the three year time limit of qualification.

A candidate who has fulfilled the requirements for anatomic pathology only, or clinical pathology only, will receive a certificate after passing the examination in anatomic or clinical pathology.

Appeals Procedure

An individual who has received an unfavorable ruling regarding his qualification to take the examination may initiate an appeal of such determination by making a written request for reconsideration to the ABP Office within 90 days of the date such ruling was mailed.

A candidate who fails a certifying examination may request that the examination be rescored to verify the accuracy of the results as reported. Such request must be made in writing within 90 days of the date of mailing of the results of the examination to the candidate. There shall be no further appeals from a failure on an examination.

AMERICAN BOARD OF PEDIATRICS

Frank A. Disney, President, Rochester, New York
Richard L. Fowler, Vice-President, New Orleans, Louisiana
William S. Conkling, Secretary-Treasurer, Novasota, Texas
Warren W. Quillian II, President-Elect, Coral Gables, Florida
Frederic M. Blodgett, Milwaukee, Wisconsin
William W. Cleveland, Miami, Florida
C. W. Daeschner, Galveston, Texas
Donal L. Dunphy, Chapel Hill, North Carolina
Thomas K. Oliver, Jr., Pittsburgh, Pennsylvania
Joseph W. St. Geme, Jr., Torrance, California

Lisbeth B. Schnorr, Washington, D.C.
Henry R. Shinefield, San Francisco, California
Robert A. Ulstrom, Minneapolis, Minnesota
Robert C. Brownlee, Executive Secretary, Suite 402,
NCNB Plaza, 136 East Rosemary Street, Chapel Hill,
North Carolina 27514
F. Howell Wright, Consultant to the Board, Chicago
Fredric D. Burg, Consultant to the Board, Philadelphia
Diane W. Butzin, Director, Evaluation and Research,
Chapel Hill, North Carolina

Requirements for Admission to Examination

All applicants for examination for certification must meet the following general requirements:

I. THE APPLICANT MUST BE A GRADUATE OF AN APPROVED MEDICAL SCHOOL in the United States or have fulfilled the requirements for graduates of Canadian or foreign medical schools. Graduates of osteopathic medical schools will be accepted if they satisfy the other requirements for certification. (For more detailed information, please read below.)

II. APPLICANTS MUST COMPLETE THREE YEARS OF HOSPITAL-BASED PEDIATRIC TRAINING in programs recommended by the Residency Review Committee for Pediatrics and accredited by the Liaison Committee on Graduate Medical Education. During this period of training, the applicant is expected to assume progressive responsibility for the care of patients. (For more detailed information, please read below.)

III. THE BOARD WILL REQUEST THE DIRECTORS OF HOSPITAL-BASED PROGRAMS TO VERIFY SATISFACTORY COMPLETION OF TRAINING AND TO EVALUATE THE ACCEPTABILITY OF THE APPLICANT AS A PRACTITIONER OF PEDIATRICS. (For more detailed information, please read below.)

I. GRADUATION FROM MEDICAL SCHOOL

The applicant must be a graduate of an approved medical school in the United States or have fulfilled the requirements for graduates of Canadian or foreign medical schools. Graduates of approved medical schools in Canada may apply for examination under the same regulations that apply to those trained in the United States.

Applicants who are graduates of medical schools other than those in the United States or Canada may apply for examination if they hold the standard certificate of the Educational Commission for Foreign Medical Graduates (ECFMG) and if they fulfill the training requirements established for certification by the American Board of Pediatrics. Graduates of foreign medical schools must submit a photocopy of their medical school diploma showing the medical degree and the date it was awarded; a certificate showing that the applicant has passed the final examinations is not acceptable. Applicants who are citizens of the United States and who are graduates of a foreign medical school may apply for examination if they hold either the standard certificate of the Educational Commission for Foreign Medical Graduates or a standard permanent license to practice medicine in one of the states, districts or territories of the United States.

Graduates of osteopathic medical schools will be accepted for examination if they satisfy the training requirements of the Board. Training must be completed in programs recommended by the Residency Review Committee for Pediatrics and accredited by the Liaison Committee on Graduate Medical Education.

II. TRAINING REQUIREMENTS

Applicants must complete three years of hospital-based pediatric training in programs recommended by the Residency Review Committee for Pediatrics and accredited by the Liaison Committee on Graduate Medical Education. Training in general comprehensive pediatrics may be completed in programs approved for pediatrics specialty training by the Royal College of Physicians and Surgeons of Canada. During

this period of training, the applicant is expected to assume progressive responsibility for the care of patients.

The Board recognizes five levels of pediatric training (PL-0 through PL-4). The Pediatric Levels are defined as follows:

- PL-0 Accredited internships or residencies in fields other than pediatrics, e.g., rotating, flexible, family practice, internal medicine, general surgery, psychiatry. Credit at this level may also be given for extensive pediatric training in countries other than the United States or Canada. Applicants who are graduates of foreign medical schools and who received their degrees prior to July 1, 1975 may request PL-0 credit for hospital-based training in another country, provided 1) it was at least one year in duration, 2) it was exclusively in the field of pediatrics, and 3) it is evaluated by the Credentials Committee of the Board to be equivalent to pediatric residency training in the United States. Applicants requesting PL-0 level credit for hospital-based pediatric training completed in another country must submit a copy of their medical school diploma and a letter from the physician in charge of their training program indicating the dates and the specialty area of their training. The medical school diploma must be a photocopy of the actual document showing the medical degree and the date it was awarded; a certificate showing that the applicant has passed the final examinations is not acceptable. **TRAINING AT THIS LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JULY 1, 1975.**
- PL-1 The first postgraduate year in general comprehensive pediatric training in an accredited program. It may be taken immediately after graduation from medical school or follow training at the PL-0 level.
- PL-2 The second postgraduate year in general comprehensive pediatric training in an accredited program following PL-1 but with increased responsibility for patient care and for the supervision of junior staff and medical students.
- PL-3 The third postgraduate year in general comprehensive pediatric training in an accredited program. This year must be an integral part of the total three years of general pediatric training required for all medical school graduates after June 30, 1978. It may be a chief residency or a senior supervising residency.
- PL-3 A single year of advanced training and clinical responsibility in a pediatric subspecialty area in an accredited program. Applicants who received their medical school degrees prior to June 30, 1978, and who enter pediatric subspecialty training after July 1, 1979 are encouraged to correspond with the Board prior to entering training to verify the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics. **SUBSPECIALTY TRAINING AT THE PL-3 LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION REQUIREMENTS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JUNE 30, 1978.**
- PL-4 An accredited program or fellowship in a pediatric subspecialty in which the proportion of time in nonclinical or laboratory activities is so large that two years must be spent to gain the equivalent of a year of clinical training. Applicants who received their medical school degrees prior to June 30, 1978, and who enter pediatric subspecialty training after July 1, 1979 are encouraged to correspond with the Board prior to entering training to verify the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics. **SUBSPECIALTY TRAINING AT THE PL-4 LEVEL IS NOT ACCEPTABLE TOWARD FULFILLMENT OF THE CERTIFICATION**

REQUIREMENTS IN GENERAL PEDIATRICS FOR THOSE WHO RECEIVE THEIR MEDICAL DEGREES AFTER JUNE 30, 1978.

Summary of Training Requirements

Applicants Who Received Their Medical Degrees:

1. *Prior to July 1, 1975*, must complete three years of hospital-based pediatric training in accredited programs in the United States or in approved programs in Canada; two of these years must be in general comprehensive pediatrics at the PL-1 and PL-2 levels. Applicants may fulfill the third year of required training by completing one of the following options:
 - a. Request PL-0 credit for an accredited internship or residency in a field other than pediatrics,
 - b. Request PL-0 credit for hospital-based training in another country provided 1) it was at least one year in duration, 2) it was exclusively in the field of pediatrics and 3) it is evaluated by the Credentials Committee of the Board to be equivalent to pediatric residency training in the United States. Applicants requesting PL-0 level credit for hospital-based pediatric training completed in another country must submit a copy of their medical school diploma and a letter from the physician in charge of their training program indicating the dates and the specialty area of their training. The medical school diploma must be a photocopy of the actual document showing the medical degree and the date it was awarded; a certificate showing that the applicant has passed the final examinations is not acceptable.
 - c. Complete a supervisory year in general comprehensive pediatrics (PL-3).
 - d. Complete an accredited residency or fellowship in a pediatric subspecialty area (PL-3 or PL-4). Applicants who enter pediatric subspecialty training after July 1, 1970 are encouraged to correspond with the Board prior to entering training to verify the acceptability of the training requirements established for entrance into the certifying examinations in general pediatrics.
2. *Between July 1, 1975 and June 30, 1978* must complete three years of hospital-based pediatric training in accredited programs in the United States or in approved programs in Canada; two of these years must be in general comprehensive pediatrics at the PL-1 and PL-2 levels. Applicants may complete the third year of training by completing one of the following options:
 - a. Complete a supervisory year in general comprehensive pediatrics (PL-3)
 - b. Complete an accredited residency or fellowship in a pediatric subspecialty area (PL-3 or PL-4). Applicants who enter pediatric subspecialty training after July 1, 1979 are encouraged to correspond with the Board prior to entering training to determine the acceptability of their particular program toward fulfillment of the training requirements established for entrance into the certifying examinations in general pediatrics.
3. *After June 30, 1978* must complete three years of hospital-based training in general comprehensive pediatrics in accredited programs in the United States or in approved programs in Canada. A year of supervisory experience must be an integral part of the total three year program; this year must include at least six months of direct and senior supervisory responsibility in general pediatrics. Residents should not accumulate more than six months time in one subspecialty over the total three year program and the total of all such subspecialty rotations should not exceed eleven months.

SPECIAL AGREEMENTS: There exists a special agreement between the American Board of Pediatrics and the AMERICAN BOARD OF INTERNAL MEDICINE whereby an applicant may fulfill the training requirements of both Boards by completing two years of accredited training in general comprehensive pediatrics and two years of accredited training in internal medicine. Applicants can apply for the written examination after they have completed two years of

Pediatrics

accredited training in general comprehensive pediatrics and one year of accredited training in internal medicine.

A special agreement also exists with the AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY whereby an applicant who completes two years of accredited training in general comprehensive pediatrics and the neurology training necessary to meet the requirements for certification in neurology with special competence in Child Neurology fulfills the training requirements of both the American Board of Pediatrics and the American Board of Psychiatry and Neurology. Applicants can apply for the written examination after completion of two years of accredited training in general comprehensive pediatrics and two years of accredited training in neurology.

Candidates will not be permitted to appear for the oral examination until after they have completed all of their training.

TRAINING PROGRAMS: The American Board of Pediatrics approved applicants for admission to its certifying process; the Board does not accredit training programs. Requests by directors for accreditation of their programs by the Liaison Committee on Graduate Medical Education should be addressed to: Secretary of the Residency Review Committee for Pediatrics, Department of Graduate Medical Evaluation, American Medical Association, 535 North Dearborn Street, Chicago, Illinois 60610.

Applicants seeking approval for individualized programs of specialized training that are not accredited by the Liaison Committee on Graduate Medical Education must ask their program directors to submit details to the American Board of Pediatrics for evaluation by its Credentials Committee, preferably prior to entrance into the special program. A description of the proposed program and a curriculum vita from the applicant should be included. When individualized approval is granted, it does not imply automatic approval for future applicants unless the program receives accreditation from the Liaison Committee on Graduate Medical Education, as described in the preceding paragraph.

GRADUATE SCHOOL COURSES: It is a fundamental concept of the American Board of Pediatrics that a residency training program should provide for properly organized progressive responsibility for the care of sick children. The Board believes further that this purpose can be accomplished best through continuity of clinical experience under supervision of attending physicians who are themselves responsible for the care of the children of that service. The substitution of a formal graduate or postgraduate school course that does not carry the essential ingredient of responsibility for patient care is, in the opinion of the Board, inconsistent with this principle. Accordingly, the Board will accept such courses as part of an approved residency program in pediatrics only in exceptional cases.

MILITARY SERVICE: Military assignments will not be accepted in lieu of a year of required training unless served as a regular resident in a military hospital that has received specific accreditation from the Liaison Committee on Graduate Medical Education for pediatric training programs.

SPECIAL SITUATIONS: The Board recognizes that situations may arise that are not explained by the preceding information. Exceptionally, a physician may have worked on a pediatric field for many years, yet be deficient in the formal prerequisites for examination, or a physician may have completed specialized training not explained in the above requirements. In such cases, the individual should present his question to the Executive Secretary of the Board, who will ask the Credentials Committee to review the record and decide whether permission should be given to enter the certification process.

STATEMENT OF ELIGIBILITY: The Board does not issue statements of "eligibility" for its examinations. Upon receipt of permission from the *registered candidate*, the Board will reveal progress toward certification to hospitals or other interested parties.

III. ROLE OF THE PEDIATRIC TRAINING PROGRAM DIRECTOR IN THE CERTIFICATION PROCESS

The Board regards the evaluation of trainee competency as a continuum which begins during training and is completed by the Board examinations following formal training. The Board depends upon program directors and their faculties to provide objective assessments of candidates' clinical competency as demonstrated in the training setting. In the written and oral examinations, candidates have the opportunity to demonstrate to the Board the knowledge and clinical problem solving abilities needed to diagnose and manage the health problems of children.

A. THE BOARD WILL REQUEST DIRECTORS OF HOSPITAL-BASED GENERAL PEDIATRIC TRAINING PROGRAMS TO VERIFY COMPLETION OF TRAINING AND TO SIGN THE FOLLOWING STATEMENT:

"I certify that the above named applicant has demonstrated the attitudes, knowledge, clinical judgment, technical skills and interpersonal skills defined in *Foundations for Evaluating the Competency of Pediatricians* and is judged to be fully prepared for independent responsibility as a general pediatrician. The applicant is recommended for examination."

All applicants must have this verification of training and verification of clinical competency on file in the Board office to be admitted to the written examination. If the Board is unable to obtain this verification, the applicant may choose to complete an additional period of training and reapply. Alternatively the applicant may appeal to the Credentials Committee of the Board. The Credentials Committee will gather additional information about the applicant and decide if permission should be given to take the examination.

B. THE PROGRAM DIRECTOR IS ALSO ASKED TO PROVIDE INFORMATION THAT WILL HELP THE BOARD'S ORAL EXAMINERS MAKE A FAIR JUDGMENT ABOUT THE CANDIDATE.

1. The program director is asked to evaluate the applicant in the following areas: gathering data by history, by physical examination, and by laboratory studies; assessing data and arriving at a diagnosis; managing problems and maintaining health; interpersonal relationships with other members of the health team; work habits and personal qualities.

2. The program director is asked to provide information that will help to determine whether the candidate's performance on the oral examination is an accurate reflection of his/her usual performance, e.g., behavior under stress, shyness, self-confidence, ability to verbalize thought processes, decision-making habits.

3. The program director is asked to rate the applicant's overall clinical competency by indicating which of the following phrases best describes the applicant in terms of his/her ability to care for children in the United States or Canada. In these phrases, the word "manage" is defined as identifying the nature of the problem, determining methods of resolving or alleviating the problem, and carrying out management plans—including the appropriate and timely use of consultants.

- 1—Unable to manage many pediatric problems including the most routine ones
- 2
- 3—Able to manage only the most routine problems in pediatrics
- 4
- 5—Able to manage the common problems of pediatrics adequately
- 6
- 7—Able to manage most pediatric problems in an adequate way
- 8
- 9—Able to manage almost any pediatric problem in a highly effective manner

A program director's assessments will be considered in arriving at a final oral examination grade. This information will not be available to the examiners prior to the oral examination.

The Board will review program directors' assessments of applicants and in the future will be able to report anonymous data to program directors regarding the relation between their assessments of applicants and performance on written and oral examinations.

C. THE BOARD RECOMMENDS THAT EACH PROGRAM ESTABLISH A COMMITTEE OF SUPERVISING FACULTY TO EVALUATE INDIVIDUAL HOUSE OFFICER PROGRESS DURING TRAINING AND AT THE END OF TRAINING.

Judgments should be made as objectively as possible and on a regular basis. Faculties are encouraged to use their own forms for periodic evaluation or to use forms developed by the Board. It is recommended that program directors maintain files documenting each resident's performance and that the evaluations in these files be discussed with residents periodically. The Board, through its representatives, will recommend to the Residency Review Committee for Pediatrics that when pediatric residency programs are reviewed, the presence of objective, systematically recorded evaluation of resident performance be assessed.

D. RESIDENTS WHO PLAN TO SEEK CERTIFICATION SHOULD BE ENCOURAGED TO TAKE THE IN-TRAINING EXAMINATION AT THE BEGINNING OF THE PL-1 AND PL-2 YEARS AND AGAIN IN THE PL-3 YEAR IF PREVIOUS PERFORMANCE IS NOT SATISFACTORY. Results can be used by the program director to evaluate the program and to indicate to residents areas in which they are weak and need additional study or training.

Program directors and their faculties may want to explore and develop evaluation procedures for assessment of physician performance. Examples are: Medical record audits, rating scales for assessment of work habits, observational checklists for assessment of technical skills, peer review, patient-parent simulators for assessment of interpersonal skills, oral examinations, and consumer questionnaires.

The Board will continue to participate in and support research efforts to develop methods for evaluating the day-to-day performance of residents in caring for infants, children, and adolescents.

E. Since ultimate certification in a pediatric subspecialty area is contingent upon passage of the examinations of the American Board of Pediatrics, a program director arranging subspecialty fellowships has an important responsibility to make sure that applicants admitted have a thorough grounding in general comprehensive pediatrics as an entering qualification.

Information Concerning Examinations

The goal of residency education in pediatrics is to produce physicians capable of performing competently in the role of physician and advocate for infants, children, and adolescents. The ability to care for sick children, as well as to encourage healthy growth and development, should be more highly developed in pediatricians than in any other health providers. In the future, pediatricians will continue to manage both acute and chronic health problems of children and adolescents. They will use consultants when appropriate. They will provide or arrange health maintenance services for children and their families. They will educate and counsel families regarding the stages of normal development and identify early those health problems and risk factors which may adversely affect development.

The content of the examinations for certification is appropriate to the practice of general comprehensive pediatrics as defined above. The examinations for certification are given in two sections: Part I is a written examination, Part II is an oral examination.

APPLICATION TO THE BOARD

Application material for admission to the certifying examinations of the Board is available throughout the year by writing to the Board. Applicants who received their medical degrees prior to July 1, 1975, may apply for admission after

they have completed the two core years in pediatrics, (PL-1 and PL-2), but they are encouraged to wait until the end of their third year of training to take the written examination. Applicants who receive their medical degrees after June 30, 1975 will be admitted to the written examination *only after* they have completed three years of pediatric training in accredited programs prior to the date on which the examination is to be held.

APPLICATIONS MUST BE POSTMARKED BY JANUARY 31ST OF THE YEAR IN WHICH THE APPLICANT WISHES TO TAKE THE WRITTEN EXAMINATION. Early application is desirable, as subsequent assignment to sites for the oral examination depends in part upon the date the first application is received by the Board. Those applications received by this deadline will be processed and evaluated and the Board will request Directors of hospital-based general pediatric training programs to verify completion of training. Those applicants who meet the training requirements of the Board and who are recommended by their program director(s) for examination will be accepted and registered for Part 1—the written examination.

PART I—WRITTEN EXAMINATION

The written examination is given in the fall of each year, simultaneously, at a number of places scattered throughout the United States and Canada.

The examination is given in two sessions, of three to four hours' duration each, with a luncheon break between. The examination consists of multiple choice questions and patient management problems. Patient management problems are a technique for allowing the candidate to simulate, in a pencil and paper format, evaluation and treatment of pediatric patients with various problems. Candidates accepted into the written examination will receive examples of the types of multiple choice questions and patient management problems to be used on the written examination.

PART II—ORAL EXAMINATION

A candidate may proceed to the oral examination only after completing the training requirements of the Board and passing the written examination. All candidates can anticipate approximately a two year interim period between completion of these requirements and subsequent consideration for oral examination. When offering appointments for an oral examination session, the Board takes into consideration the year the candidate passed the written examination and the date the candidate's initial application for the written examination was received by the Board. Oral examinations are held five or more times each year in cities across the United States. It is the candidate's responsibility to keep the Board informed of any changes in mailing address so that information concerning the oral examination can be sent to the candidate at the appropriate time.

Fees

The cost of certification includes the following fees, payable in United States dollars only:

Processing and Evaluating Fee	\$100.00
Registration Fee	50.00
Written Examination (one only)	150.00
Total payment at the time of initial application	\$300.00
Oral Examination (one only—fee payable on receipt of appointment, which is given only after successful completion of the written examination)	150.00
TOTAL EXAMINATION FEES	\$450.00

A new registration fee and a new examination fee will be assessed for each written re-examination and each oral re-examination.

Each of the above fees entitles the applicant to one examination only. Applicants, who in previous years were permitted more than one examination for the fee paid, are now subject to the above fee schedule.

These and other fees mentioned in this booklet are subject to change without notice.

Pediatrics**Failure in Examinations**

Part I (Written Examination)—Written re-examinations may be taken one or two years later at the additional charge stated above. Candidates who are unsuccessful in the written examination *must* appear for re-examination within three years. Candidates who do not appear for re-examination within such specified time will be dropped from the list of active candidates and their applications will be destroyed.

Part II (Oral Examination)—Candidates who are unsuccessful in the oral examination may request a second examination after one year and must appear for re-examination within four years. A third oral examination will not be permitted until the candidate has taken and passed another written examination.

Postponement of Examinations

Part I (Written Examination)—After the Board has accepted an application, the candidate is expected to take the next written examination offered. Such examinations are given annually at the places announced by notice to qualified candidates. Candidates who withdraw from the written examination will be required to pay a new registration fee prior to entrance into any subsequent examination. After admission cards are mailed, an additional fee will be assessed for those candidates who withdraw from the written examination or who fail to appear for the examination. If the candidate fails to appear for the examination by the third opportunity after acceptance of the application, the application processing and evaluating fee and the registration fee will be forfeited and a new application must be filed.

Part II (Oral Examination)—After successful completion of the written examination, a candidate is expected to appear for the oral examination within four years of completion of all requirements. If a candidate fails to appear after a lapse of four years, his name will be dropped from the list of active candidates and his application will be destroyed. If the candidate accepts an appointment for the oral examination and either withdraws or fails to appear for the examination after confirmation cards are mailed, the fee for that examination will be forfeited and payment of a new examination fee and a new registration fee will be required. If a candidate fails to appear after a lapse of four years, his name will be dropped from the list of active candidates and his application will be destroyed.

Failure to Appear for Examination

In case of failure to appear for examination within the periods specified above, the candidate's name will be dropped from the list of active candidates and the candidate's application will be destroyed. Should the physician later decide to seek certification, he would have to file a new application and submit the proper fees.

Certification by the Board

A certificate is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have passed the examinations satisfactorily.

Competency Document

Candidates are encouraged to order the document *Foundations for Evaluating the Competency of Pediatricians* in order to obtain a detailed list of competencies expected of all pediatricians by the American Board of Pediatrics. While this is not a study guide, where possible, all questions used on the examination of the American Board of Pediatrics will be testing for these competencies. Copies of this document may be ordered for \$5.00 each from the American Board of Pediatrics office. Please make checks payable to the American Board of Pediatrics, Inc.

Certification in Pediatric Subspecialties

The American Board of Pediatrics has established a procedure for certification in the following subspecialties as areas of special competency: Pediatric Cardiology, Pediatric Endocrinology, Pediatric Hematology-Oncology, Pediatric Nephrology and Neonatal-Perinatal Medicine.

Sub-Board of Pediatric Cardiology

Robert A. Miller, Chairman, Chicago
C.W. Daeschner, Galveston, Texas
Welton M. Gersony, New York City
Thomas P. Graham, Jr., Nashville, Tennessee
Ronald M. Lauer, Iowa City, Iowa
Martin H. Lees, Portland, Oregon
Jacqueline A. Noonan, Lexington, Kentucky
William B. Strong, Augusta, Georgia

Sub-Board of Pediatric Hematology-Oncology

Frank A. Oski, Chairman, Syracuse, New York
Charles F. Abildgaard, Sacramento, California
Robert L. Baehner, Indianapolis, Indiana
Werner A. Bleyer, Seattle, Washington
Milton H. Donaldson, Philadelphia, Pennsylvania
Beatrice C. Lampkin, Cincinnati, Ohio
Thomas K. Oliver, Jr., Pittsburgh, Pennsylvania
Joseph V. Simone, Memphis, Tennessee

Sub-Board of Pediatric Nephrology

Alan B. Gruskin, Chairman, Philadelphia
Richard N. Fine, Los Angeles
Richard L. Fowler, New Orleans
Nancy H. Holland, Lexington, Kentucky
Wallace W. McCrory, New York City
Alfred F. Michael, Jr., Minneapolis, Minnesota
Stanley Mendoza, La Jolla, California
Adrian Spitzer, Bronx, New York City

Sub-Board of Neonatal-Perinatal Medicine

James M. Sutherland, Chairman, Cincinnati, Ohio
Frederick C. Battaglia, Denver, Colorado
Alfred W. Brann, Jr., Atlanta, Georgia
Stanley N. Graven, Sioux Falls, South Dakota
L. Stanley James, New York City
Nicholas M. Nelson, Hershey, Pennsylvania
Joseph W. St. Geme, Jr., Torrance, California
William H. Tooley, San Francisco

Subspecialty Committee of Pediatric Endocrinology

Alvin B. Hayles, Chairman, Rochester, Minnesota
Gilbert P. August, Washington, D.C.
Robert M. Blizzard, Charlottesville, Virginia
William W. Cleveland, Miami
Laurence Finberg, Bronx, New York
Thomas P. Foley, Jr., Pittsburgh
Selma L. Kaplan, San Francisco
Ira M. Rosenthal, Chicago
Louis E. Underwood, Chapel Hill, North Carolina

Certification in Pediatric Cardiology

The American Board of Pediatrics has established a procedure for certification in pediatric cardiology.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the subspecialty examination.

2. *Two years of full-time graduate training in an accredited pediatric cardiology training program.* Applicants should consult the Directory of Residency Training Programs published by the American Medical Association each fall for a listing of programs accredited for fellowship training in pediatric cardiology.

3. *Letter(s) of recommendation from the pediatric cardiology program director(s) where the training occurred.* These letters must be solicited by the applicant. They should not accompany the application, but should be sent directly by the writer to the American Board of Pediatrics. Please request that the writer of the letter include the exact dates of your fellowship training. All letters should be sent to the American Board of Pediatrics prior to the closing of registration for a particular examination.

Examinations

Candidates must pass both the written and oral examinations in pediatric cardiology to be certified. These examinations are offered every two or three years. Please contact the American Board of Pediatrics for the exact date of each examination.

The purpose of these examinations is to determine the candidate's competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Failures in Examinations

Candidates who fail the written examination are eligible to be readmitted for re-examination at the next written examination upon specific application and payment of the appropriate fee. Candidates must appear for re-examination within three examination cycles.

Candidates who fail one oral examination are eligible to be readmitted to a second oral examination upon specific application and payment of the appropriate fee. Upon failure in two oral examinations, the candidate will be required to take and pass the written examination before being admitted to a subsequent oral examination.

Postponement of Examination

After the Sub-Board has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination will be required to pay a new registration fee (\$50) prior to entrance into any subsequent examination. If the candidate fails to appear for examination by the third opportunity after acceptance of the application, the application processing and evaluating fee and the registration fee will be forfeited and a new application must be filed.

Failure to Appear for Examination

In the case of failure to appear for examination within the periods specified above, the candidate's name will be dropped from the list of active candidates and the candidate's application will be destroyed. Should the physician later decide to seek certification, he/she must file a new application and submit the proper fees.

Fees

The cost of certification includes the following fees:

New application:

- \$150 processing & evaluating fee
- 50 registration fee for one written exam
- 100 written exam fee for one exam
- \$300 TOTAL payment at time of initial application

Plus \$150 oral exam fee for one exam — payable when an appointment is received.

Re-examination:

- \$ 50 registration fee for one written re-exam
- 100 written exam fee for one written re-exam
- \$150 TOTAL
- \$ 50 registration fee for one oral re-exam
- 150 oral exam fee for one oral re-exam.
- \$200 TOTAL

Fees are subject to change at any time. Checks (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Certification

A certificate for special competency is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examinations of the Sub-Board.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, Suite 402, NCNB Plaza, 136 East Rosemary Street, Chapel Hill, North Carolina 27514. Telephone (919) 929-0461.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

Certification in the Pediatric Subspecialty Areas of Endocrinology, Hematology-Oncology, Neonatal-Perinatal Medicine, and Nephrology

The American Board of Pediatrics has established a procedure for certification in several subspecialties as areas of competency in pediatrics as noted above.

Eligibility Criteria

1. *Certification by the American Board of Pediatrics.* Applicants may submit their application prior to taking the oral examination in general pediatrics. However, an applicant must take and pass the oral examination before being permitted to take the subspecialty examination.

2. *Subspecialty Training or Experience:*

Applicants who graduated from medical school prior to July 1, 1978, may embark on their subspecialty training after two years of training (PL1, 2) in an approved general pediatrics program. The first year of the subspecialty training (fellowship) may be concurrent with the required third year of training necessary to qualify for the boards in general pediatrics provided that the subspecialty training (fellowship) is a two year program or more. Also, such programs must ensure that at least half of the experience involves clinical work with children. This is meant to imply that no credit is given toward qualification to sit for a subspecialty examination for periods of less than two years of fellowship except as outlined under items below. It also specifically means that no credit toward subspecialty qualification will be allowed for elective time spent in subspecialty areas during the usual residency years (PL1, 2, 3).

Applicants who graduated from medical school after July 1, 1978, may embark on their subspecialty training after three years of training (PL1, 2, 3) in an accredited general pediatrics program.

The applicant must have COMPLETED one of the following to be eligible to sit for the examination:

A. *Two years of full-time fellowship training in the appropriate subspecialty area*, at least one year of which, preferably both years, is in a program under the supervision of a director who is certified in that particular subspecialty or lacking such certification possesses equivalent credentials.

B. *Five years in the practice of that particular subspecialty area.* A minimum of 50% of regular practice time must be spent in the practice of the subspecialty to receive credit. (It is assumed that night and weekend practice time would be distributed in the same manner as regular practice time.) This practice time should be of such type and quality that it substitutes for the clinical exposure one might have encountered during fellowship training. In addition, for Neonatal-Perinatal Medicine, significant involvement in Level III care must be demonstrated. All practice time must be accrued before July 1, 1978 for Pediatric Hematology-Oncology and Nephrology; before July 1, 1979 for Neonatal-Perinatal Medicine; and before July 1, 1982 for Pediatric Endocrinology.

C. *A combination of fellowship and practice as outlined in one of the two methods below:*

- (1) Those applicants who have had less than 12 months of fellowship will be credited for this time as practice time on a month for month basis. For example, a nine month fellowship would be credited as nine months of practice time; this added to four years and three months of practice would total the 60 months or five years of practice required prior to July 1,

Pediatrics

1978, for Pediatric Hematology-Oncology and Nephrology, prior to July 1, 1979, for Neonatal-Perinatal Medicine, and prior to July 1, 1982, for Pediatric Endocrinology.

- (2) Those applicants having 12 to 23 months of fellowship will be credited for this time as practice time on a two for one basis. For example, a 15 month fellowship would be credited as 30 months of practice credit; this added to 30 months of practice would total the 60 months or five years of practice required prior to July 1, 1978, for Pediatric Hematology-Oncology and Nephrology, July 1, 1979, for Neonatal-Perinatal Medicine, and July 1, 1982, for Pediatric Endocrinology.

Those applicants entering the examination via the *practice* or *combination* routes must make application, be approved for, and take the examination in 1980 or sooner for Pediatric Hematology-Oncology, 1981 or sooner for Neonatal-Perinatal Medicine, 1982 or sooner for Pediatric Nephrology, and 1984 or sooner for Pediatric Endocrinology.

All subspecialty training must be in the United States or Canada, unless the Credentials Committee of the Sub-Board/Subspecialty Committee has given approval of foreign subspecialty training to an applicant *before* he/she enrolls in such a program. Applicants wishing to obtain such approval should contact the American Board of Pediatrics. No foreign practice will be accepted by the Credentials Committee in fulfillment of the requirements.

The applicant who does not qualify for examination via the *practice* or *combination* routes must train in a two-year, full-time fellowship program in the appropriate subspecialty to be eligible to sit for the examination after July 1, 1978 in Pediatric Hematology-Oncology and Nephrology; after July 1, 1979 in Neonatal-Perinatal Medicine; and after July 1, 1982 in Pediatric Endocrinology.

3. Verification of Training and/or Practice

A. For those utilizing the *fellowship training route*, an Evaluation Form, which is provided by the Board Office, will be required from:

- (1) the pediatric subspecialty program director where the training occurred.

B. For those utilizing the *practice route*, an Evaluation Form, which is provided by the Board Office, will be required from:

- (1) the pediatric subspecialty program director in the hospital where the applicant is seeing patients (if there is a training program);

OR (2) the pediatric department chairman OR the chief of pediatrics in the hospital where the applicant is now or has been in the practice of the subspecialty.

C. For those utilizing the *combination fellowship-practice route*, an Evaluation Form, which is provided by the Board Office, will be required from:

- (1) the pediatric subspecialty program director where the training occurred;

AND, (2) the pediatric department chairman OR the chief of pediatrics in the hospital where the applicant is now or has been in the practice of the subspecialty.

The Evaluation Forms are sent to each applicant as part of the application form. It is the applicant's responsibility to forward the Evaluation Form(s) to the appropriate person(s) for completion. The completed Evaluation Form(s) should be sent directly by the program director, chief of pediatrics, or department chairman to the American Board of Pediatrics. All Evaluation Forms should be sent to the Board Office prior to the closing of registration for a particular examination.

Each application is considered individually and must be acceptable to the Sub-Board/Subspecialty Committee to which it is submitted. Questions concerning eligibility will be considered by the Credentials Committee of the appropriate Sub-Board/Subspecialty Committee upon completion of an application and payment of the fee.

Training Programs

At the present time, there are no officially accredited training programs in Pediatric Endocrinology, Hematology-Oncology, Nephrology, or Neonatal-Perinatal Medicine. Until the usual mechanisms of approval via the Residency Review Committee and the Liaison Committee on Graduate Medical Education are completed, the pediatric resident contemplating entering subspecialty training would be well advised to enter those programs in which the director or senior faculty of the program is certified in that particular subspecialty or possesses equivalent credentials. Only those training programs which are operated in association with accredited residency programs in general pediatrics offering PL1, 2, 3 will be considered.

For Neonatal-Perinatal Medicine, only those programs offering residency or fellowship training in obstetrics and gynecology and include experience in fetal-maternal-perinatal medicine will be considered.

Credit toward certification via fellowship training will be given to the candidate who successfully completed the required time in such programs.

Special Requirements

Special Requirements for Training Programs have been drafted by each Sub-Board/Subspecialty Committee. While they are not yet approved by the Liaison Committee on Graduate Medical Education (LCGME), these Special Requirements are thought of as examples of suggested criteria for training programs. A draft of the Special Requirements for each subspecialty is available by writing to the Board office. The Credentials committee of each Sub-Board/Subspecialty Committee will be guided by these suggestions for programs in evaluating the applicant's eligibility.

Examinations

An examination in each subspecialty area is offered approximately every two or three years. Please contact the American Board of Pediatrics for the exact date of each examination.

The purpose of these examinations is to determine the candidate's competency to practice the subspecialty. Emphasis therefore is placed on practical aspects. Since good practice is founded on knowledge and sound use of basic sciences, the candidate must be prepared to demonstrate an adequate grasp of relevant basic information in genetics, embryology, anatomy, physiology, pharmacology, and the like.

Failure in Examinations

Candidates who are unsuccessful in the examination are eligible to be readmitted for examination at the next examination, offered upon specific application and payment of the appropriate fee (\$300). Candidates must appear for re-examination within three examination cycles.

Postponement of Examination

After the Sub-Board/Subspecialty Committee has accepted an application, the candidate is expected to take the next examination offered. Candidates who withdraw from the examination will be required to pay a new registration fee (\$50) prior to entrance into any subsequent examination. If the candidate fails to appear for examination by the third opportunity after acceptance of the application, the application processing and evaluating fee and the registration fee will be forfeited and a new application must be filed.

Failure to Appear for Examination

In the case of failure to appear for examination within the periods specified above, the candidate's name will be dropped from the list of active candidates and the candidate's application will be destroyed. Should the physician later decide to seek certification, he/she must file a new application and submit the proper fees.

Fees

The cost of certification includes the following fees:

New application:

- \$150 processing & evaluation fee
- 50 registration fee for one exam
- 250 written exam fee for one exam
- \$450 TOTAL payment at time of initial application

Re-examination:

- \$ 50 registration fee for one exam
- 250 written exam fee for one exam
- \$300 TOTAL

Fees are subject to change at any time. Check (U.S. funds only) should be made payable to the AMERICAN BOARD OF PEDIATRICS.

Certification

A certificate for special competency is awarded by the American Board of Pediatrics to those candidates who have met the requirements and have satisfactorily passed the examination of the Sub-Board/Subspecialty Committee.

Applications

Application forms are available only during the registration period for a particular examination from the American Board of Pediatrics, Suite 402, NCNB Plaza, 136 East Rosemary Street, Chapel Hill, North Carolina 27514. Telephone: (919) 929-0461.

It should be noted that these criteria and conditions are subject to change without notice. All applicants are advised to consult the American Board of Pediatrics at the above address to ascertain that the information they have is current.

AMERICAN BOARD OF PHYSICAL MEDICINE AND REHABILITATION

- Glenn Gullickson, Jr., Chairman, Minneapolis, Minnesota
- John T. Ditunno, Vice Chairman, Philadelphia
- B. Stanley Cohen, Baltimore
- Victor Cummings, Bronx, New York
- Murray M. Freed, Boston
- Arthur E. Grant, San Antonio, Texas
- Catherine N. Hinterbuchner, New York
- Leonard D. Policoff, San Francisco, California
- John W. B. Redford, Kansas City, Kansas
- Arthur A. Rodriguez, Chicago
- Gordon M. Martin, Executive Secretary-Treasurer, Suite J, 1 A Kahler East, Rochester, Minnesota 55901
- Donald J. Erickson, Assistant Secretary-Treasurer, Rochester, Minnesota

Requirements for Certification

A. Graduates of Educational Institutions in the United States:

1. Graduation from a school approved by the Liaison Committee on Medical Education, or graduation from a school which, in the opinion of the Board, offers education equivalent to such an approved school.

2. Satisfactory completion of the requirements of the Board for graduate education and experience in physical medicine and rehabilitation as set forth below.

3. Satisfactory compliance with rules and regulations of the Board pertaining to the completion and filing of the application for examination and the payment of required fees.

B. Graduates of Educational Institutions not in the United States:

1. Graduation from a school which, in the opinion of the Board, offers medical education equivalent to a medical school approved by the Liaison Committee on Medical Education.

2. Successful completion of the examination of the Educational Commission for Foreign Medical Graduates or equivalent examination unless the candidate holds a license to practice in the United States or Canada.

3. Satisfactory completion of the Board's requirements for graduate education and experience in physical medicine and rehabilitation as set forth below.

4. Satisfactory compliance with rules and regulations of the Board pertaining to the completion and filing of the application for examination and the payment of required fees.

Graduate Education and Full-Time Practice

Qualifications for admission to the examination for certification in physical medicine and rehabilitation requires: 1) to be admissible for Part I of the examination, a minimum of three calendar years of graduate education in a residency program approved by the Residency Review Committee and accredited by the LCGME which encompasses a minimum of 30 months of full-time supervised clinical training in physical medicine and rehabilitation; and 2) to be admissible for Part II of the examination, a minimum of one year of full-time clinical practice in the specialty of physical medicine and rehabilitation, or its equivalent as determined by the Board.

Essentially all of said training and experience must be undertaken in the United States or Canada. However, candidates who have received graduate medical education in a foreign country may, at the discretion of the Board, be given limited credit for such training.

At the discretion of the Board, four years of full-time broadly based practice in physical medicine and rehabilitation may be accepted as a substitute for not more than six months of graduate education in an approved residency program.

Credit for six months of said graduate education, at the discretion of the Board, may be given to a candidate who has a minimum of four years of general practice.

Any candidate who has had at least two year's training in an approved residency in a specialty other than physical medicine and rehabilitation may meet the requirements of the Board for Part I of the examination by completing 30 months graduate education in an approved program of physical medicine and rehabilitation, which must be spent in full-time supervised clinical training in physical medicine and rehabilitation.

Practice in military service, performed after the required graduate education has been completed, is considered the same as any other practice experience, provided that the practice has been exclusively in the specialty of physical medicine and rehabilitation.

First Year Graduate Program

The first year graduate program, also referred to as the "integrated graduate program," is that program in which a candidate begins three years of graduate education in physical medicine and rehabilitation immediately upon graduation from a school acceptable to the Board. The candidate must during the first year of the graduate program: 1) receive a minimum of six month's training which in the judgment of the Board is equivalent to that provided by internship, 2) receive 6 months training in acute medical and surgical conditions which fulfill requirements of the Board, and 3) receive Board approval of the proposed graduate training.

The procedure required to receive Board approval of this proposed graduate training is as follows:

1. The program director of the residency program in physical medicine and rehabilitation shall complete a form which outlines the proposed program for the candidate's residency training.

2. The program director shall send the said form to the secretary of the Board for the Board's approval.

3. The secretary of the Board shall notify the program director by letter that the Board has approved or disapproved the candidate's proposed first year graduate residency program.

Any candidate who transfers from residency training in other recognized specialties must complete the above listed requirements during his first year of graduate training in physical medicine and rehabilitation, unless for such candidate it can be verified that this requirement was met during his training experience in another specialty; in all such cases the program director shall proceed by the same procedures herein before enumerated to assure that such candidate has complied with this requirement.

Physical Medicine and Rehabilitation**Application**

The application form which must be submitted by a candidate applying for the examination leading to certification is obtained by writing to the secretary of the Board. The completed application shall contain a record of the candidate's undergraduate and graduate training, or the program director's statement that the candidate has completed the integrated graduate program approved by the Board, graduate study, hospital staff appointments, teaching positions, length of time practice has been limited to physical medicine and rehabilitation, medical papers published, and any other information he deems relevant to the determination of his admissibility for examination. In addition, there must be submitted with the application the names of three physiatrists or other physicians to whom the Board shall write for professional and character references. At the option of the applicant, he may include the names of any additional physicians. The applicant will submit to the physicians so named a form requesting them to rate the professional ability of the applicant. No applicant will be declared admissible for examination until the physicians from whom references are requested have replied.

All information submitted to the Board by the physician from whom a reference has been requested shall remain confidential and shall not be disclosed to the candidate without the permission of the said physician. Strict confidentiality of references submitted is required to assure that the Board receives complete and accurate evaluations of all candidates.

If a candidate plans to take Part I only, he must submit fees of two hundred fifty dollars (\$250), fifty dollars (\$50) of which is an evaluation fee and not refundable nor reassessed.

The fees must accompany the application. If the candidate is applying for Part II, he must write a letter of application and send an examination fee of two hundred dollars (\$200). If the candidate is applying for Part I and II, initially, the same year, he must send with the application, fees of four hundred fifty dollars (\$450). Fifty dollars (\$50), as heretofore mentioned, is an evaluation fee and not refundable. Fees for re-examination are one hundred seventy-five dollars (\$175) for Part I or II, or if both Part I and II are taken the same year, the fees are three hundred fifty dollars (\$350).

The candidate must have completed his graduate education or clinical practice requirements on or before August 31 following the scheduled examination date for which he has applied in order to have his application considered for the examination of that year. Except as hereinafter provided, *fees paid hereunder are not refunded*. Only in the event that a candidate withdraws his application prior to Board action thereon, or that a candidate is declared not admissible for the examination, will the Board return to the candidate the refundable portion of his fee.

The Board is a non-profit organization and the fees of the candidates are used solely for defraying the actual expenses of the Board. The members of the Board serve without remuneration. The Board reserves the right to change the fees when necessary.

Designation of Admissibility

Board admissible is a term used by the Board to define the status of the candidate who has been accepted by the Board to take the examination for which the candidate has applied; designation of Board admissible does not continue beyond the date such examination is given, regardless of results.

The procedures required of candidates to be designated Board admissible are as follows:

A.

CANDIDATES WHO HAVE NOT PREVIOUSLY APPLIED FOR EXAMINATION OR WHO HAVE PREVIOUSLY APPLIED BUT HAVE FORFEITED THEIR APPLICATION FEES PURSUANT TO RULES SET OUT IN THE SECTION ON APPLICATION.

1. Timely filing of educational credentials and application for certification with the Secretary of the Board by the applicant.

2. Payment of fees for the examination by the applicant.
3. Transmission of a letter of confirmation of admissibility from the Secretary of the Board to the candidate, verifying that the applicant has fulfilled all requirements and is Board admissible.

B.

CANDIDATES WHO ARE RE-APPLYING FOR PART ONE, HAVING FAILED PART ONE; OR WHO ARE APPLYING FOR PART TWO, HAVING SUCCESSFULLY COMPLETED PART ONE, OR WHO ARE RE-APPLYING FOR PART TWO HAVING FAILED PART TWO BUT WHO HAVE SUCCESSFULLY PASSED PART ONE.

1. Filing a letter of application for the examination by the applicant, or an application as requested.
2. Payment of the examination fee by the applicant.
3. Transmission of a letter of confirmation of admissibility from the Secretary of the Board to the candidate, verifying that the applicant has fulfilled requirements and is Board admissible.

Following the establishment of Board admissibility, the candidate will be notified of the time and place for the examination.

A candidate may take Part I and Part II of the examination in the same year, but if he fails Part I, his status with reference to Part II will not be considered because Part I must be passed in order to become eligible for Part II of the examination.

A candidate who fails Part I or Part II or both Parts of the examination may re-apply for admissibility for re-examination, if done before November 15 of the year before the scheduled examination.

Failure to Appear

Failure to take the examination once admissibility is established for either Part I or Part II shall result in forfeiture of the fee deposited without exception.

Examinations

As part of the requirements for certification by the American Board of Physical Medicine and Rehabilitation, candidates must demonstrate satisfactory performance in an examination conducted by the Board covering the field of physical medicine and rehabilitation.

The examination for certification is given in two parts. Part I is written; Part II is oral.

Part I (written) may be taken after the satisfactory completion of the specialized graduate education required by the Board outlined above.

Part II (oral) may be taken only after one year of full-time broadly based practice in physical medicine and rehabilitation, following satisfactory completion of approved residency training.

Both the written and oral examinations will cover certain aspects of the basic sciences as well as clinical physical medicine and rehabilitation. Those basic sciences will include:

1. *Anatomy*, including kinesiology and functional anatomy.
2. *Physics*, related to the field
3. *Physiology*, including physiology of movement and physiologic effect of the various physical agents used in physical medicine and rehabilitation.
4. *Pathology*
5. *Other fundamental sciences*: The applicant may be examined concerning his knowledge of other subjects related to physical medicine and rehabilitation.

The clinical aspects will include:

1. Those diseases and conditions that come within the field of physical medicine and rehabilitation including those of children. These include various rheumatic diseases; neuromuscular diseases; cerebral and spinal cord injuries and diseases (e.g. cerebral vascular accidents, postoperative sequelae of surgery of the brain and spinal cord, cerebral palsy and paraplegia) and musculoskeletal diseases, including the large group of traumatic and orthopedic conditions.

2. The clinical use of such physical agents as heat, water, electricity, ultraviolet radiation, massage, exercise, and rehabilitation techniques.
3. Diagnostic procedures including electromyography and electrodiagnosis.
4. A knowledge of the roles of allied personnel within or associated with the field of physical medicine and rehabilitation, such as the physical therapist, occupational therapist, clinical psychologist, medical social worker, and vocational counselors; and the ability to coordinate the services of such personnel.
5. An understanding of the basic principles of physical medicine and rehabilitation, and the ability to prescribe and supervise specific treatment to be executed by allied health personnel.

Method of Examination

Part I and Part II of the Board examination are given once each year, usually in May or June, at such time and place as the Board shall designate. Part I is a written examination. This examination is divided into morning and afternoon periods of approximately three hours each. The questions are designed to test the candidate's knowledge of basic sciences and clinical management as related to physical medicine and rehabilitation, and will be in the form of objective testing.

Part II is an oral examination. The oral examinations are given by the members of the Board with the assistance of selected guest examiners.

Candidates will be expected to present in a concise, orderly fashion evidence of their proficiency in the management of various clinical conditions which come within the field of physical medicine and rehabilitation. During the oral examination, questions will be asked about diagnostic procedures, therapeutic procedures and patient management. The candidate should be prepared to demonstrate his ability to interpret roentgenologic, electrodiagnostic and other material related to patient management. The candidate should demonstrate familiarity with the literature of basic and clinical research. Conciseness and clarity of statement is desirable. Evidence of the maturity of the candidate in a clinical procedure and of factual knowledge will be sought.

Certificate

Upon approval of the candidate's application and successful completion of the examinations, the Board will grant a certificate to the effect that the candidate has met the qualifications required by the Board for the specialty of Physical Medicine and Rehabilitation. The recipient of a certificate shall be known as a certificant or a diplomate of the American Board of Physical Medicine and Rehabilitation.

A certificate granted by this Board does not of itself confer or purport to confer any degree or legal qualifications, privileges, or license to practice physical medicine and rehabilitation. The Board does not limit or interfere with the professional activity of any duly licensed physician who is not certified by this Board. Privileges granted physicians in the practice of physical medicine and rehabilitation in any hospital or clinic are the prerogatives of that hospital or clinic, not of this Board.

The chief aim of the Board is to standardize qualifications for specialists in physical medicine and rehabilitation and to certify as specialists those who voluntarily appear before the Board for such recognition and certification, according to its regulations and requirements; and thereby provide assurance to the public and the medical profession that certificants possess particular competence in physical medicine and rehabilitation.

The names of consenting diplomates of the Board appear in the Directory of Medical Specialists by Marquis Who's Who, Inc. of Chicago, Illinois, for the American Board of Medical Specialties.

AMERICAN BOARD OF PLASTIC SURGERY

John B. Lynch, Chairman, Nashville, Tennessee
 Robert F. Ryan, Vice Chairman, New Orleans

Robin Anderson, Cleveland
 James Bennett, Indianapolis
 Bertram Bromberg, Mineola, New York
 Harry H. Buncke, Jr., San Mateo, California
 Lester M. Cramer, Colorado Springs, Colorado
 Robert V. DeVito, Seattle
 David W. Furnas, Orange, California
 Mark Gorney, San Francisco
 William C. Grabb, Ann Arbor
 B. Herold Griffith, Chicago
 Dwight C. Hanna, Pittsburgh
 Thomas J. Krizek, New York City
 Thomas D. Rees, New York City
 Melvin Spira, Houston
 William C. Trier, Chapel Hill, North Carolina
 John E. Hoopes, Secretary-Treasurer,
 1617 John F. Kennedy Blvd.,
 Philadelphia, Pennsylvania 19103

General Qualifications

1. Moral and ethical standing in the profession satisfactory to the Board. Practices contrary to ethical public relations will be subject to close scrutiny and may result in grounds for rejection of the application.
2. This Board will accept only those persons who have fulfilled the requirements set forth in this brochure as applicants for examination.
3. This Board will accept only those persons whose practice is limited to the field of plastic surgery as applicants for examination.

Professional Requirements for Qualification

The Board considers the requirements outlined below to be minimal in attaining its purpose, and encourages candidates to take advantage of broadening experience in other fields.

Since these requirements may be changed from time to time by Board action, the candidates must fulfill those requirements which are in force at the time of their examination and/or certification.

1. Graduation from an accredited medical school in the United States or Canada recognized by the Council on Medical Education of the American Medical Association or graduation from a foreign medical school acceptable by the Board. The Board will accept the certificate of the Educational Council for Foreign Medical Graduates as evidence that the holder thereof is possessed of medical knowledge comparable to that expected of graduates of approved medical schools in the United States or Canada. The certificate of the ECFMG will not be required for those graduates of foreign medical schools who are licensed by examination to practice medicine in any state of the U.S. or Canada.

2. Three years of training in general surgery as a resident or an assistant resident in a hospital approved by the Residency Review Committee for Surgery. Of the required three years of approved training in surgery, a minimum of twenty-four months must be spent in clinical surgery, and may include the usual rotation of one or more of the following: orthopedic surgery, urological surgery, neurological surgery, thoracic surgery, gynecological surgery and other divisions of surgery as well as general surgery. All general surgery residency training must be completed prior to entering a plastic surgery residency.

The Board may give credit up to one year toward this three year requirement to those who have had approved training in disciplines other than general surgery, or in non-clinical fields of particular value to the discipline of plastic surgery. It is recommended that a prospective candidate obtain prior approval of his plans for this third year whenever possible. This should be done either through the Director of his Training Program or by direct application to the Board. Each case is to be evaluated by the Board on its own merits. The training of those candidates who have been certified by one of the following boards will fulfill the prerequisite of three years of general surgery training: American Board of Colon and Rectal Surgery, American Board of Neurological Surgery, American

Plastic Surgery

Board of Orthopedic Surgery, American Board of Otolaryngology, American Board of Surgery, American Board of Thoracic Surgery, and American Board of Urology. Documentation of full fellowship (the certificate of higher surgical training) in the College of Surgeons of South Africa, the Royal Australian College of Surgeons, or the Royal College of Surgeons of England, Edinburgh, Glasgow or Dublin will fulfill the prerequisite of three years of general surgery training.

3. Training in plastic surgery for an additional period of not less than two years in a residency approved by the Residency Review Committee for Plastic Surgery is required. To be accredited, training in plastic surgery must be obtained in the United States or Canada.

AN APPLICATION FOR EXAMINATION AND CERTIFICATION MUST BE ACCOMPANIED BY A LETTER OF RECOMMENDATION FROM THE CHIEF OF SERVICE OF THE PROGRAM ON WHICH THE TRAINING WAS RECEIVED AND THE PROGRAM DIRECTOR'S OFFICIAL EVALUATION FORM.

4. During these years of training, a candidate must hold positions of increasing responsibility for the care of patients. Major operative experience and senior responsibility are an essential part of surgical education and training. An important factor in the development of a surgeon is the opportunity under guidance and supervision to grow by progressive and succeeding stages to the stature of complete responsibility for the surgical care of the patient. When a candidate receives his training in more than one institution, it is equally imperative that he hold positions of increasing responsibility.

5. Training in plastic surgery should cover a wide field of plastic surgery. It should include experience in both the functional and esthetic management of congenital and acquired defects of the face, neck, body and extremities. Sufficient material of a diversified nature should be available to prepare the trainee to pass the examination of the Board after the prescribed period of training. If the available material on one service is inadequate, the Chief of that Service may correct the deficiency by establishing an affiliation with one or more surgeons on another service within the hospital, or by regular rotation of his residents on another approved affiliated service in order that a broad experience is obtained. The trainee should be provided an opportunity to operate independently on suitable cases under more remote supervision.

This period of specialized training should emphasize the relationship of basic science—*anatomy, pathology, physiology, biochemistry, microbiology*—to surgical principles fundamental to all branches of surgery, and especially to plastic surgery. In addition, the training programs must provide in depth exposure to the following subjects: the care of emergencies, shock, wound healing, blood replacement, fluid and electrolyte balance, narcotics and hypnotics, anesthetics, chemotherapy, etc.

The Board reserves the privilege of:

- (1) requesting lists of operations performed solely by the candidate for one or more years;
- (2) of requesting special and extra examinations, written or oral and practical; and
- (3) of requesting any specific data concerning the candidate that may be deemed advisable before making final decision for certification.

The primary interest of the Board is to encourage well-rounded training in plastic surgery with the ultimate goal of producing a plastic surgeon capable of managing the wide variety of problems which may come under his care. The standards set up by the Board both for preliminary surgery, and for specialized plastic surgery training are established in an effort to further this aim. The quality of training received will be reflected in the candidate's ability to achieve good results in his practice. The examinations of the Board are an attempt to evaluate the general knowledge and ability of the candidate in his chosen specialty of plastic surgery.

Training Facilities

THE AMERICAN BOARD OF PLASTIC SURGERY DOES NOT ASSUME THE RESPONSIBILITY FOR INDEPENDENT INSPECTION AND APPROVAL OF RESIDENCIES. The Residency Review Committee inspects and makes recommendations for or against approval of a residency training program in plastic surgery only after the Director of the Residency has filed an application for approval with the Secretary of the Residency Review Committee for Plastic Surgery (Tripartite Committee), 535 North Dearborn Street, Chicago, Illinois 60610. The Residency Review Committee makes its inspection at the same time as the A.M.A. inspection, if at all possible, and reports its findings to the Secretary of the Tripartite Committee. The Chief of Service, the hospital administration, and the Board are notified by the Secretary of the joint action which has been taken. All correspondence concerning the application for approval is handled through the Secretary of the Tripartite Residency Review Committee. The Committee consists of 3 representatives from the Council on Medical Education of the A.M.A., 3 from the American College of Surgeons, and 3 from the American Board of Plastic Surgery.

ONLY TRAINING IN PLASTIC SURGERY RECEIVED IN THOSE RESIDENCIES APPROVED BY THE RESIDENCY REVIEW COMMITTEE FOR PLASTIC SURGERY IS ACCEPTABLE TO THE BOARD. Two years of training in plastic surgery in programs approved as two-year programs is acceptable as the minimum requirements in plastic surgery. In programs approved by the Tripartite Committee as three-year residencies, THE CANDIDATE MUST COMPLETE THE ENTIRE THREE YEARS WITH AT LEAST ONE YEAR OF SENIOR RESPONSIBILITY IN ORDER TO RECEIVE FULL CREDIT.

Candidates completing plastic surgery training in Canadian programs approved by the Royal College of Surgeons (Canada) will be eligible to take the American Board of Plastic Surgery examinations providing the general surgical requirements of the Board have been fully satisfied.

Neither the Board nor its individual members can be responsible for the placement of applicants for training. The Board does NOT maintain a list of available openings in training programs. Prospective candidates should write to the directors of those programs in which they are interested to obtain such information. For a list of approved residencies in plastic surgery, consult the Directory of Accredited Residencies published annually (October or November) by the Council on Medical Education of the American Medical Association. The Directory is available from the A.M.A. upon request.

Examination

After evaluation of the candidate's training, and upon approval by the Board of his Application for Examination and Certification, the candidate will be notified of his eligibility to take Part I of the Qualifying examinations. Application for Part I examination must be received in the office of the Board no later than January for the candidate to be eligible to take the Part I examination offered in the Spring.

If the qualifying examination is not taken within five years from date of application, the candidate will no longer be eligible for admission to examination and a new application for examination and certification will be required.

Part I

Part I of the American Board of Plastic Surgery certifying examinations will be given each year in the Fall. Each candidate will be notified of the time and location of the examination. The examination will be given on the date specified, at the time specified. There will be no exceptions made, no special examinations given.

Part I of the American Board of Plastic Surgery certifying examination will consist of the following:

- A. A three hour multiple choice written examination covering the spectrum of clinical plastic and reconstructive surgery and the body of basic science pertinent to it:
 1. Basic techniques, wound healing, microsurgery, transplantation.

2. Burns, sepsis, metabolism, trauma, resuscitation, nutrition, endocrine, shock, blood.
 3. Pre and post operative care, anesthesia, respiratory care, complications, clinical pharmacology.
 4. Neoplasia: Head and Neck, skin, breast. Radiation, immunotherapy, chemotherapy.
 5. Trunk, lower extremity, musculoskeletal, pressure sores, rehabilitation.
 6. Hand, peripheral nerves.
 7. Maxillofacial, craniofacial.
 8. Congenital anomalies, genetics, teratology, facial, speech.
 9. Aesthetic, medico-legal, psychology.
- B. A three hour multiple choice written examination covering pertinent:
1. Gross and microscopic pathology as well as basic knowledge of pathology; e.g., the biological behavior of neoplasms; inflammation and repair.
 2. Gross, microscopic and functional anatomy.

The candidate will pass or fail on the strength of his performance in the entire Part I examination.

Upon successful completion of Part I of the certifying examination the candidate will be notified of his eligibility to take Part II, the oral examinations, which will be given yearly in the Spring or at any other time if so decided by the Board action.

All candidates taking the examination of the American Board of Plastic Surgery must complete the entire examination. Certification by another surgical board does not exempt a candidate from any part of the examination.

A candidate scheduled for examination who fails to appear for examination or who fails to notify the Board office of cancellation of his examination 30 days prior to the examination date will be required to pay a fee of \$100.00 for rescheduling. Exceptions to this requirement, upon receipt of valid reason, may be made by officers of the Board.

Grades

Successful completion of the Part I examination requires that a candidate achieve a passing grade for the entire examination rather than for each and every specific section separately.

A candidate will be judged to have successfully completed Part I if his grade is at or above that grade which is one standard deviation below the mean of a peer reference group. The characteristics of that peer reference group have been determined by the Board and will set the standard of performance.

Re-examinations

In case of failure, the candidate will repeat the complete Part I examination rather than a component segment thereof. The candidate must give the Board office notice requesting re-examination and pay a fee of \$250.00 for the written re-examination. The candidate may be re-examined when Part I is next given, but not later than three years afterward. If the candidate is not re-examined within three years, a new application process is required. The candidate will be judged to have successfully completed Part I if his grade is at or above that grade which is one standard deviation below the mean of a peer reference group.

A candidate who failed one re-examination will be admitted for further examination after an interval of two years. If the candidate continues to be unsuccessful, he can be admitted for re-examination every two year period thereafter. The Board for valid and compelling reasons may deny a candidate the privilege of further re-examination.

Part II

Upon successful completion of the written examination the candidate will be notified of his eligibility to apply for the oral examination given each year in the Fall or at any other time as deemed necessary by the Board. To be eligible for admission, a candidate must notify the Board office of his intention to take the examination 60 days prior to the scheduled date of the examination.

Part II of the examination consists of two parts given the same day.

1. A 45 minute oral examination on eight major cases submitted by the candidate indicative of his work in the field of plastic surgery.
2. A 45 minute oral examination on the art and science of the practice of plastic surgery.

Eight cases will be assembled by the candidate and brought to the Board examination. All cases must have been done following the completion of the residency training period, and must have been performed by the candidate as the responsible surgeon. Each candidate will bring to the examination the following materials on each of his 8 submitted cases.

1. Pre and post operative photographs. 3 x 5 black and white or color prints mounted on 8 x 11 heavy paper similar to a standard photographic album. No slides will be allowed.
2. Official copies in English of all operative notes on the eight (8) submitted cases.
3. Pertinent pathology reports and other pertinent laboratory data.
4. Pertinent x-rays and drawings.
5. A copy of office treatment records.

A diversified nature of the case materials submitted is evidence of the candidate's expertise in the representative areas of plastic surgery, and should be drawn from the following categories; to be acceptable, there must be cases in seven of the nine categories:

1. Congenital facial clefts.
2. Traumatic defects requiring reconstructive surgery:
 - (a) Maxillofacial region
 - (b) Body and extremities
3. Acute burns.
4. Facial bone fractures (excepting simple nasal fractures).
5. Aesthetic operations.
6. Malignancies or conditions prone to malignancy:
 - (a) Of the head and neck regions.
 - (b) Of the body and extremities.
7. Hand surgery.
8. Congenital anomalies:

Examples: Syndactylism, microtia, hypospadias, congenital cysts, extensive nevi, congenital bands craniofacial dysostosis, etc.
9. Complications; i.e., iatrogenic or unexpected.

To be accepted, case summaries must be assembled according to the instructions given. In addition:

1. There must be a separate listing of cases by categories including the identifying hospital case number.
2. A separate signed form, stating, "I hereby certify that the planning and essential surgical procedures described herein were performed by me an independent operator." Only one statement is necessary for the entire group.
3. Each report is to be typed on a standard letter size paper (8½" x 11") with the candidate's name, the number of the case, the hospital case number, followed by a summary.
4. Bind the cases in groups of 4 or singly for ease of inspection. All assembled material, including photographs and copies of original operative reports and laboratory and pathology data, should be on the same size paper and bound into simple manila folders using the usual metal fasteners.

The American Board of Plastic Surgery regards the case reports submitted as important evidence of the candidate's basic ability and organization in plastic surgery. Improper and disorderly preparation of this material will be sufficient cause to disqualify the candidate for continued examination. The candidate must be prepared to defend his choice of operation, to present alternative treatment plans and to be familiar with pertinent literature on the subject. The Board, at its discretion, may request certification of the case reports by the hospital where the operations were performed.

Preventive Medicine

Each candidate will be examined by two teams of two examiners. If he feels he has been unfairly or inadequately examined by one of these two teams he may petition for re-examination immediately following the examination. If his petition to the Chairman of the Board or his designee has merit, that candidate will be given one additional forty-five minute oral examination. The candidate in so petitioning for another examination should be fully aware he does so without knowledge of his status as to pass or fail in the examination in question.

A candidate scheduled for examination who fails to appear for examination or who fails to notify the Board office of cancellation of his examination 30 days prior to the examination date will be required to pay a fee of \$100.00 for re-scheduling. Exceptions to this requirements, upon receipt of valid reason, may be made by the officers of the Board.

Grades

All candidates will be evaluated by each member of his examining teams and any having difficulty will be discussed in detail by the entire Board. The final decision regarding certification will be rendered at the meeting of the Board following completion of the oral examinations.

Candidates who have failed the oral examinations may be admitted to another examination at the next regular examination period but not later than three years afterward. If the candidate is not re-examined within three years, a new application process is required. The candidate must give the Board notice requesting re-examination, and pay a fee of \$250.00 for the oral re-examination. Any candidate who fails one re-examination will be admitted for further examination after an interval of 2 years. If the candidate continues to be unsuccessful, he can be admitted for further examination every two year period thereafter. The Board may, however, for reasons it deems sufficient, deny a candidate the privilege of further re-examination.

Certification

After a candidate has met the requirements for eligibility and passed the examinations of the Board a certificate attesting his qualifications in plastic surgery will be issued by the Board, which has been signed by its officers with the seal of the Board affixed thereto. It shall be the prerogative of the Board to determine the fitness, professionally and ethically, of any candidate for a certificate and the Board for cause may defer or deny certification of any candidate.

Fees

The fee for application and examination is \$500.00 in U.S. funds. Of the sum, \$250.00 must accompany the application and the remaining \$250.00 must be paid when the candidate is notified of acceptance for the Part II examination. There will be no refunds. This fee may be increased at the discretion of the Board. The Board is a nonprofit organization and the fees of candidates are used solely for defraying the actual expenses of the Board. The members of the Board serve without remuneration. Because of the limited number of surgeons certified by this Board it may be necessary to request a voluntary annual contribution from diplomates after the first year of certification to help defray expenses.

AMERICAN BOARD OF PREVENTIVE MEDICINE

Duane L. Block, Chairman, Dearborn, Michigan

Paul Q. Peterson, Vice Chairman for
Public Health, Chicago

Albert Oberman, Vice Chairman for
General Preventive Medicine, Birmingham, Alabama

Norbert J. Roberts, Vice Chairman for
Occupational Medicine, New York City

Stanley R. Mohler, Vice Chairman for
Aerospace Medicine, Dayton, Ohio

John B. Atwater, Ann Arbor, Michigan

George F. Catlett, Jamaica, New York

Bertram D. Dinman, Pittsburgh, Pennsylvania

H. Bruce Dull, Atlanta, Georgia

Eugene W. Fowinkle, Nashville, Tennessee

William M. Marine, Denver, Colorado

Pauline O. Roberts, Los Angeles

Edyth H. Schoenrich, Baltimore, Maryland

John H. Smith, Vancouver, British Columbia

Reuel A. Stallones, Houston, Texas

Stanley R. Mohler, Secretary-Treasurer,

Department of Community Medicine,

Wright State University School of Medicine,

P.O. Box 927, Dayton, Ohio 45401

Eligibility Requirements for Examination

Each applicant for a Certificate in Public Health, Aerospace Medicine, Occupational Medicine, or General Preventive Medicine is required to meet certain eligibility requirements and to pass an examination. Such eligibility requirements are set forth in the By-laws of the Board. For the information of applicants such requirements are briefly outlined below; but for a full statement thereof reference must be made to the By-laws, as from time to time in force, by which alone such requirements are governed:

General Requirements

1. Graduation from a medical school in the United States or Canada approved by the Council on Medical Education of the American Medical Association, or from a school of osteopathic medicine which was at the time approved by the American Osteopathic Association, or from a foreign school satisfactory to the Board;

2. A year of postgraduate clinical training developed as part of an approved residency program in preventive medicine or in a clinical program approved by one or more Residency Review Committees and comprising experience involving direct patient care; or service or training deemed by the Board to be equivalent to such training;

3. An unrestricted license to practice medicine in a State, Territory, Commonwealth or possession of the United States or in a Province of Canada.

4. Residency of not less than one year which shall have provided supervised experience in the practice of Public Health, Aerospace Medicine, Occupational Medicine or General Preventive Medicine including planned instruction, observation and active participation in a comprehensive organized program in one of the specialty areas, approved by the Liaison Committee on Graduate Medical Education on the recommendation of the Joint Residency Review Committee for Preventive Medicine of the American Medical Association's Council on Medical Education and the American Board of Preventive Medicine; or a period of experience deemed by the Board to be substantially equivalent to such residency.

5. A period of academic training consisting of completion of a course of study leading to a master's degree in preventive medicine or public health, the content of which shall include biostatistics, epidemiology, health services administration and environmental health; or successful completion of post-baccalaureate study of the extent, depth, content and rigor generally required in such master's degree program.

Special Requirements in Public Health

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, preventive medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.

2. The applicant must have been engaged in training for, or the practice of, public health for at least two of the five years preceding application for certification.

Special Requirements in Aerospace Medicine

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, aerospace medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.

2. The applicant must have been engaged in training for or the practice of aerospace medicine for at least two of the five years preceding application for certification.

Special Requirements in Occupational Medicine

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, occupational medicine. Candidates may be permitted to take examinations four months prior to the completion of this period but final certification is contingent upon such completion.

2. The applicant must have been engaged in training for, or the practice of, occupational medicine for at least two of the five years preceding application for certification.

Special Requirements in General Preventive Medicine

1. In addition to the general requirements, a period of not less than one year of special training or research in, or teaching or practice of, preventive medicine or some component discipline thereof. Candidates may be permitted to take the examinations four months prior to the completion of this period but final certification is contingent upon such completion.

2. The applicant must have been engaged in training for, or the practice of, preventive medicine for at least two of the five years preceding application for certification.

Equivalencies for Eligibility Determination

Individuals who have not formally completed all of the components previously described may be considered eligible if their training and experience is considered by the Board to provide suitable equivalency for that formal training.

The Board will consider granting certain credit toward satisfying requirements for eligibility for such factors as:

1. certification by one of the American specialty boards with significant preventive medicine components in their practice (e.g. Internal Medicine, Pediatrics, Family Practice) plus a minimum of two years of full-time practice of preventive medicine;

2. teaching or research experience in fields relevant to preventive medicine; and/or

3. suitable periods of practice, research or teaching in preventive medicine.

An applicant in aerospace medicine or occupational medicine who is lacking a formal academic year may substitute four additional years of practice in the special area of aerospace medicine or occupational medicine.

Each applicant is considered individually by the Board in accordance with the existing guidelines.

Applications for Examination and Re-examination

Each application for examination must be made on the prescribed form (which may be obtained from the Secretary of the American Board of Preventive Medicine). It must be accompanied by the required documentation, application fee, and two recent, clear, autographed photographs of the applicant. An official transcript of all graduate academic training in preventive medicine should be sent directly to the Board from the registrar of the institution where the training was undertaken.

No member of the Board is authorized to give an opinion as to the eligibility of candidates. The determination of eligibility will be made only by the full Board, after receiving full application information. Each candidate must comply with Board regulations in effect at the time the examination is taken and also those in effect at the time the Certificate (if any) is issued, regardless of when his original application was filed.

An applicant declared ineligible for admission to examination may refile or reopen his or her application on the basis of new or additional information within two years of the filing date of his original application, without payment of an additional application fee.

An applicant declared eligible for admission to examination but who fails to submit to examination within three years of the date of the first examination for which he or she is declared

eligible, is required to file a new application, and to pay a new application fee.

Candidates failing the examination, may, upon timely application and payment of appropriate fee, be admitted to re-examination within a three-year period.

Candidates failing three examinations will not be admitted to subsequent examinations unless the Board so directs.

Multiple Certification

An individual may establish eligibility for certification in multiple fields of preventive medicine by submitting separate applications and fees for each field. Eligibility determination will be carried out independently and candidates may be given credit for any period of appropriate training or experience, regardless of its having been used to establish eligibility in another field.

Fees

Application fee	\$100
Must be submitted with application; is not refundable.		
Examination fee	\$400
Fee for each Part of examination is one-half of total examination fee and is payable 30 days prior to the examination date.		
Re-examination fees:		
Each part taken	\$200
Examination fees for additional field		
Specialties: Each field	\$200

Examinations

The examination consists of two parts:

Part I is a comprehensive written examination designed to test the knowledge of the applicant in the basic principles of preventive medicine and is pertinent to all fields. Part II is a comprehensive written examination emphasizing the applicant's knowledge in the special field in which he or she requests certification, as well as knowledge of the broad principles of preventive medicine.

Candidates for certification in a second or third field will be required to pass only that portion of the examination relating specifically to such field, i.e. Part II only.

The examiners will submit a report upon each candidate to the assembled Board, by which the result of the examination will be determined finally.

Certification

Upon satisfactory completion of the examination and proof to the satisfaction of the Board that the applicant is eligible for certification, a Certificate will be issued to the effect that the applicant has been found to be possessed of special knowledge in the field specified. The Certificate will be signed by officers of the Board and will have its seal affixed. Each Certificate remains the property of the Board, but the person to whom it is issued is entitled to its possession unless and until it is revoked. Any Certificate issued by the Board may be revoked if evidence, satisfactory to the Board, is presented that the applicant was not eligible to receive it at the time of application or issuance, or that any pertinent fact had been misstated, misrepresented, or concealed. The issuance of a Certificate to any person does not constitute such person a member of the Board.

AMERICAN BOARD OF PSYCHIATRY AND NEUROLOGY

- MaRC H. Hollender, President, Nashville, Tennessee
- Melvin D. Yahr, Vice President, New York City
- Dewey K. Ziegler, Secretary, Kansas City, Kansas
- Richard M. Steinhilber, Treasurer, Cleveland, Ohio
- Leonard Berg, St. Louis
- Patrick F. Bray, Salt Lake City
- John R. Calverley, Galveston, Texas
- Alfred M. Freedman, Valhalla
- T. R. Johns II, Charlottesville, Virginia
- Audrey S. Penn, New York City
- Carolyn B. Robinowitz, Washington, D.C.
- Richard I. Shader, Newton Centre, Massachusetts

Psychiatry and Neurology

S. Mouchly Small, Buffalo, New York
 James N. Sussex, Miami
 John A. Talbott, New York City
 Lester H. Rudy, Executive Director,
 One American Plaza, Suite 808,
 Evanston, Illinois 60201

Certificates

The Board currently issues four types of certificates: (1) in Psychiatry, (2) in Neurology, (3) in Child Psychiatry, and (4) in Neurology with Special Competence in Child Neurology. An applicant may be certified in more than one area. The applicant shall receive a separate certificate for each area in which he or she qualifies. Each certificate shall be in such form as may be specified by the Board.

Revocation of Certificates

The Board shall have authority to revoke any certificate issued by it or to place a certificate holder on probation for a fixed or indefinite time if:

- (a) The certificate was issued contrary to or in violation of the Bylaws or any Rule or Regulation of the Board.
- (b) The person to whom the certificate was issued made any material misstatement or omission of fact to the Board in his application or otherwise.
- (c) A license to practice medicine of the person to whom the certificate was issued is forfeited, revoked or suspended without such person's consent.

Letters of Eligibility

The Board interprets the term "Board eligible" to mean having been accepted for examination. Letters of eligibility are not issued prior to receipt of formal application, application fee and acceptance of the candidate for examination by the Committee on Credentials. An applicant is considered "Board eligible" only when he or she has an active, approved application on file in the Board's Executive Office.

Application

An applicant who wishes to be examined by the Board shall complete, sign and file with the Executive Director an application on the official form, together with the required application fee and supporting data. Photocopies of applications are not acceptable. Application forms may be obtained from the Executive Director.

An application must be received in the Executive Office of the Board no later than the September 1 preceding the scheduled date of the Part I examination for which the physician is applying.

It takes approximately ten weeks for the Board to review and process an application. Applications received on the deadline date may take longer because of the volume received at that time.

Applications which are not accompanied by the application fee will not be processed. Application fees unaccompanied by the formal application will be returned.

An applicant must complete the Board's training requirements no later than September 1 of the year in which he or she is submitting an application.

Appeal Procedure for Negative Determinations Regarding Applications or Examinations

An applicant whose application for admission to examination for certification has been rejected or a candidate who has received a failing grade on either Part I or Part II of the examination may appeal such rejection or failure (both of which are hereafter called "negative determinations") by complying with the following procedures:

- 1) Within twenty (20) days after receiving notice of a negative determination, the applicant or candidate must give written notice of appeal to the Review Committee of the Board at the address specified in (5) below. Information tending to rebut the negative determination must be received within forty-five (45) days after receiving notice of a negative determination.

2) If the applicant or candidate requests the opportunity to appear personally or by counsel before the Review Committee, he shall be permitted to do so; however, such an appearance will not be scheduled until after submission of the written information required in (1) above. At any such appearance, the applicant or candidate will be given an opportunity to present his position and to cross-examine any adverse witnesses. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider any evidence it deems appropriate.

3) If the Review Committee decided to affirm the negative determination in question, it will notify the applicant or candidate in writing of its decision, the basis therefore, and of the applicant's or candidate's right to appeal the decision to the Board within twenty (20) days.

4) If the applicant or candidate appeals the decision of the Review Committee to the Board, the Board will review all of the evidence considered by the Review Committee. However, the Board will not consider any evidence, written or oral, that was not presented to the Review Committee. If the Board disagrees with the decision of the Review Committee, it may reverse the decision or remand that matter to the Review Committee for further consideration with precise instructions as to the basis of such reconsideration. The applicant or candidate will be informed in writing of the Board's decision which, in all events, will be final and binding on the Board and on the applicant or candidate.

5) All notices or other correspondence directed to the Review Committee or to the Board should be sent to the following address:

American Board of Psychiatry and
 Neurology, Inc.
 One American Plaza
 Suite 808
 Evanston, Illinois 60201

General Requirements

The following requirements must be met at the time of submission of the application.

1. If the applicant is a physician (M.D.), the applicant must establish that:
 - (a) He or she has an unlimited license to practice medicine in a state, commonwealth, or territory of the United States, or a province of Canada. All applicants are required to submit copies of licensures with current registrations with their Part I applications.
 - (b) He or she has satisfactorily completed the Board's specialized training requirements in Psychiatry or Neurology, or both.
2. If the applicant is an osteopathic physician (D.O.), the applicant must establish that:
 - (a) He or she has an unlimited license to practice medicine in a state, commonwealth, or territory of the United States. All applicants are required to submit copies of licensures with current registrations with their Part I applications.
 - (b) He or she has satisfactorily completed the Board's specialized training requirements in Psychiatry or Neurology, or both.

Training Requirements

Satisfaction of the following training requirements for residency is mandatory for physicians entering training programs on or after July 1, 1977.

Two patterns of training are acceptable:

1. Prior to entering an approved Psychiatry or Neurology training program, a physician must have completed one year of approved training after receiving the degree of Doctor of Medicine or Doctor of Osteopathy. This year of clinical experience should emphasize Internal Medicine, or Pediatrics or Family Practice.

The following training patterns would meet this requirement:

- (a) A Categorical First Year in Internal Medicine, Family

Practice, Pediatrics, Surgery, or Obstetrics and Gynecology.

(b) A Categorical* First Year in Neurology or Psychiatry which includes at least four months in direct patient care responsibility in Internal Medicine, Family Practice, or Pediatrics.

(c) A Flexible First Year which includes four months of Internal Medicine.

2. A four-year training program in Psychiatry or in Neurology would be acceptable with the provision that 4 to 12 months be spent in an approved program providing supervised, direct responsibility for the general medical care of children and/or adults.

For the physician seeking certification in both Psychiatry and Neurology, one general clinical year is required.

The Categorical First Year, Categorical* First Year, and the Flexible First Year are defined as follows in the May 22, 1974 memorandum from Leonard D. Fenninger, M.D., Director, Department of Graduate Medical Education, American Medical Association.

"Categorical First Year—There are first-year programs planned, sponsored, and conducted by a single approved residency program as part of that residency. The content of such a first year will be limited to the specialty field of the sponsoring residency program."

"Categorical First Year*—The Asterisk designates a first-year program that will be planned, sponsored, and supervised by a single, approved residency program as part of that residency's program of graduate medical education, the content of which will not be limited to the single specialty of the sponsoring residency program but may include experience in two or more specialty fields as determined by the sponsoring program."

"Flexible First Year—The first year will be sponsored by two or more approved residencies and will be jointly planned and supervised by the residencies that sponsor it. Such a first year is designed to give a broad clinical experience for: (1) students who feel the need for this type of first year; (2) program directors who feel that such an experience will best serve the purpose of subsequent graduate education in their field; and (3) students who have not yet decided on their specialty but may wish to choose among several fields during their first graduate year. The content of a flexible first year must include four months of Internal Medicine, but the remainder of the year may be designed in accordance with the purposes of the two or more sponsoring residency programs, and the interests and needs of the student."

CERTIFICATE IN PSYCHIATRY AND/OR NEUROLOGY

An applicant who seeks admission to examination for certification *either* in Psychiatry or in Neurology, must have satisfactorily completed three full years of postgraduate, specialized training in a program accredited by the Liaison Committee on Graduate Medical Education of the American Medical Association or the Royal College of Physicians and Surgeons of Canada and an approved PGY-1 year. The training must be in the specialty in which the applicant seeks certification and must be undertaken in the United States or Canada. No credit will be given for training done less than half-time.

For an applicant who began training after June 30, 1956, at least 24 months of training must have been spent in a training program or different programs approved for at least two years of training in the specialty in which he or she seeks certification.

For an applicant whose training began after June 30, 1964, at least two full years of his or her three years of training must be spent in a single program approved for two or three years of training credit.

For those who plan to seek certification in Child Psychiatry, the requirement can also be satisfied if the candidate takes one year of Adult Psychiatry and one year of Child Psychiatry in a single program approved for two or three years of training

credit. Similarly, for the candidate in Neurology with Special Competence in Child Neurology, this requirement will be satisfied by a candidate who takes one year of Child Neurology and one year of Adult Neurology in a single program approved for two or three years of training credit. As an alternative to two years of a three-year program being spent in a single program, the ABPN will accept other patterns of training if the applicant can document that the total time (i.e., three years) permitted the applicant to assume progressive levels of responsibility and that a comprehensive curriculum was covered.

With the approval of the Psychiatry program director, up to one year of training in Neurology may constitute a portion of the training program in Psychiatry.

Neurology candidates who have completed one year of approved training in neurosurgery may be granted up to six months of Neurology training credit, contingent upon the approval of the Neurology training director. One year of Neurology training credit will be granted to Neurology candidates who have completed three or more years of approved neurosurgery training, contingent upon the approval of the Neurology training director.

No residency training credit can be given for experience or work performed in another medical specialty.

Training program approved by the Residency Review Committees and accredited by the Liaison Committee on Graduate Medical Education of the American Medical Association may be found in the current issue of the *Directory of Residency Training Programs* published by the American Medical Association. This *Directory* includes the "Essentials of Accredited Residencies."

If an applicant seeks certification in *both* Psychiatry and Neurology, he or she must have satisfactorily completed five full years of postgraduate training, two years in each specialty, in approved training programs in the United States or Canada and an approved PGY-1 year. For an applicant whose training began after June 30, 1964, the two-year training period in Psychiatry must be spent in a single program approved for two or three years of training in Psychiatry. Similarly, the two-year training period in Neurology must be spent in a single program approved for two or three years of training in Neurology.

CERTIFICATE IN CHILD PSYCHIATRY

Each applicant for certification in Child Psychiatry must be certified by the Board in the specialty of general Psychiatry prior to taking the examination in Child Psychiatry. The general policies regarding training, application and examination in Child Psychiatry are contained in the pamphlet "Information for Applicants for Certification in Child Psychiatry," which is available from the Executive Office.

DUAL CERTIFICATION IN CHILD PSYCHIATRY AND IN NEUROLOGY WITH SPECIAL COMPETENCE IN CHILD NEUROLOGY

An applicant who wishes to obtain certificates *both* in Child Psychiatry and in Neurology with Special Competence in Child Neurology must meet the following requirements. He or she must be certified by the Board in the specialty of general Psychiatry prior to taking the examination in Child Psychiatry. The applicant must also meet the requirements for certification in Neurology with Special Competence in Child Neurology. One year of training in Neurology may be substituted for one year of the required psychiatric training.

CERTIFICATE IN NEUROLOGY WITH SPECIAL COMPETENCE IN CHILD NEUROLOGY

The American Board of Psychiatry and Neurology, Inc., believes that the proper preparation for the practice of Child Neurology requires that the practitioner be a competent Neurologist who has had additional training in Pediatrics and Child Neurology. To qualify for this certificate a different type of preparation and certifying examination is required. The

Psychiatry and Neurology

same diploma will be used, the only difference being that instead of certifying competence in "Neurology," it certifies competence in "Neurology with Special Competence in Child Neurology." The applicant must comply with the Board's requirements for certification and examination as stated in the section on GENERAL REQUIREMENTS. An applicant seeking admission to examination for certification in Neurology with Special Competence in Child Neurology must have completed the following specialized training:

1. A PL-2 year (or its equivalent) as defined by the American Board of Pediatrics.*
2. A total of three years of residency training in Neurology which includes:
 - a) One year of adult clinical neurological residency;
 - b) A total of one year of neurological residency devoted to clinical Child Neurology;
 - c) A total of one year in Neurology in which the trainee is offered adequate experience in (1) basic neurological sciences such as neuroanatomy, neurophysiology, neuropathology, neuropharmacology, and neurochemistry; (2) closely related specialties such as neuroradiology, neurosurgery, neuro-ophthalmology, child psychiatry, and child psychology; and (3) special studies and laboratory procedures essential to the production of an effective practitioner and investigator in the field of Child Neurology.

Training Credit for Applicants from the United Kingdom

For each year of residency training completed in an approved hospital program in Psychiatry or in Neurology in the United Kingdom, one year of training credit will be given toward eligibility for examination by the Board in Psychiatry or Neurology.

The hospital program must be among those approved by the Visiting Inspecting Specialty Committee in Psychiatry or the Visiting Inspecting Committee in Neurology of the Royal College of Physicians.

In order to obtain credit for two or three years of approved training in the United Kingdom, at least two years of the training must be spent at the same training center in Psychiatry or in Neurology.

The applicant will be responsible for sending the details of his or her training to the American Board of Psychiatry and Neurology's Executive Office, along with verification of this training from the approved hospital or hospitals in the United Kingdom. The applicant's program director must certify that the applicant was engaged in full-time residency training. Credit for approved residency training in the United Kingdom will be given only for training begun on or after July 1, 1976. Applicants who have completed residency training in the United Kingdom prior to July 1, 1976 must meet the criteria outlined in the section "Applicants With Non-U.S. Training Qualifications."

Applicants with Non-U.S. Training Qualifications

The following criteria pertain to all applicants who residency training was undertaken at a center located outside the United States or Canada. These criteria also apply to applicants who completed residency training in the United Kingdom prior to July 1, 1976.

1. The candidate must have had full-time specialty training in a manner equivalent in length of time and content to that required for U.S. training and
2. the candidate must successfully complete a comparable, national certification examination in the country of train-

*In its "Booklet of Information" dated September 1, 1975, the American Board of Pediatrics defines the PL-1 and PL-2 years as follows:

"PL-1 The first postgraduate year in general pediatric training in an approved program. It may occur immediately after graduation from medical school or following training at the PL-0 level."

"PL-2 Similar to and following PL-1 but with increased responsibility for patient care and for supervision of junior staff and medical students."

ing in the specialty in which the physician is seeking admission to examination and

3. the candidate must possess an unlimited license to practice medicine in a state or commonwealth of the United States or a province of Canada and

4. the candidate must have achieved certification within the past seven (7) years. If earlier, then the candidate must have had one year of clinical practice in a setting in which his/her professional work has been observed by at least two ABPN diplomates in that specialty and documented by two letters of sponsorship from such diplomates.

Criterion for PGY-1 Abroad

For those candidates who have completed the first postgraduate year of training in a training center located outside the United States or Canada the following criterion will be acceptable: The candidate must have completed a full year of supervised postgraduate training equivalent to that required by the Board for United States and Canadian graduates as evidenced by appropriate documentation. This documentation should consist of a letter of verification from the institution at which the training was taken and from the person who was in charge of the training. The burden of verification for this year rests with the candidate.

Program for Special Training and Qualifications (PSTQ)

The purpose of this program is to admit to examination those few exceptionally qualified candidates whose training and experience have been unusual because of the individualized research and clinical training features of their careers. The standard of performance at examination is the same as for candidates with conventional training.

A candidate must be nominated by a director of a training program approved by the Liaison Committee on Graduate Medical Education of the American Medical Association. The program director must be from the institution where the candidate had a substantial portion of training or experience, or where the candidate has a current professional appointment. The director must justify the unique but adequate character of the candidate's training program, and must describe in detail the candidate's clinical experience and competence, as well as his or her professional goals and accomplishments.

The candidate must have completed at least five years of training. Evidence must be submitted to show that the candidate has had satisfactory direct responsibility for patient care in his or her field of specialization. In addition to the usual application form, the candidate's curriculum vitae, bibliography, and reprints should be submitted for consideration. Each nomination for the PSTQ plan will be considered on an individual basis by the Credentials Committee and the Board of Directors.

Examinations

Though the purpose of the examination is to test the competence of the candidate in Psychiatry or Neurology, or both, it must not be forgotten that both these medical disciplines constitute part of the broad field of general medicine. The Board requires proficiency in Neurology on the part of those it certifies in Psychiatry and vice versa, but examines the candidate in accordance with the certificate he or she seeks.

Each candidate must pass both Part I and Part II of the examinations given by the Board. Each examination shall cover such subjects as the Board may determine.

The Board may conduct such examinations at such times and places as it deems appropriate. The Board reserves the right to limit the number of candidates admitted to any scheduled examination. The administration and grading of all examinations shall be in the sole discretion of the Board. After completion of such examinations, the candidate will be notified by the Executive Director as to the results.

Rules on Forfeiture of Examination Fees

A candidate who is unable to attend any examination to which he or she has been admitted and who fails to notify the

Executive Director at least three (3) months before the start of such examination shall forfeit the examination fee. This is necessary because all arrangements for each candidate's examination must be made several months in advance. The Board is responsible for expenses incurred whether the candidate appears or not. All fees may be modified from time to time as necessary.

Part I Examination Content

Successful completion of the Part I written examination in both basic Psychiatry and basic Neurology is required of candidates seeking certification in either Psychiatry, Neurology, or Neurology with Special Competence in Child Neurology.

Psychiatry Examination

For all candidates the Part I examination will include questions on the following areas in Psychiatry: normal and abnormal growth and development through the life cycle, mental retardation, psychopathology (descriptive and psychodynamic), biological and psychosocial psychiatry and diagnostic procedures.

For Psychiatry candidates the Psychiatry examination will involve additional questions on history, ethics, transcultural studies, epidemiology and Psychiatry and the law.

Neurology Examination

For all candidates the Part I Neurology examination will include material on the following neurological subjects: neuroanatomy, neuropathology, and the diagnostic, neurological procedures (neuroradiology, electroencephalography, visual fields, optic fundi, and psychometric testing).

The Neurology examination for Neurology candidates will also include questions on neurochemistry, neuropharmacology, neurophysiology, neurootology, and further diagnostic procedures (electromyography, nerve conduction time, brain scanning, and computerized axial tomography). The Neurology examination for Psychiatry candidates will include questions on clinical Neurology.

Part I Examination Procedures

The Part I examination is given once a year, in the spring, on a regional basis throughout the United States and Canada, as well as in selected sites outside the continental limits of the United States. Every effort is made to accommodate candidates in the locale of their choice, but no transfer to another site can be made during the three-month period preceding the Part I examination.

After an applicant has been advised by the Board of acceptance for examination, the applicant shall, on request, submit the required examination fee.

Applicants will also be expected to indicate, in order of preference, their choice of two examination sites.

Because of the volume of applications, the Board must adhere firmly to the deadlines established for receipt of examination fees. A candidate's name will be removed from the examination roster if he or she fails to submit the examination fee by the deadline specified. Candidates will then be required to request and submit a new application and application fee.

All candidates are required to take the next scheduled Part I following the date of acceptance for examination. Candidates who fail to do so will be required to request and submit a new application and application fee.

A candidate who passes Part I shall, upon request, submit to the Executive Director a check payable to the Board to cover the fee for Part II. Candidates who pass the Part I examination will automatically be assigned to a Part II examination and shall be required to be present as scheduled for Part II. All candidates will be scheduled for Part II within one year following notification of successful completion of the Part I.

A candidate who fails the initial Part I examination may, upon payment of the Part I re-examination fee, repeat the examination the following year. Two failures necessitate

reapplication (request for and submission of another completed application and payment of the application fee).

EFFECTIVE JULY 1, 1976, A PASSING GRADE ON THE PART I EXAMINATION DATED ANY TIME SINCE APRIL 1, 1969, WILL BE VALID FOR A PERIOD OF SEVEN (7) YEARS FROM THE DATE OF PASSING. ALL INDIVIDUALS HOLDING SUCH A GRADE MAY APPLY OR REAPPLY FOR THE PART II EXAMINATION.

Part II Examination

Part II, an oral examination, will include the examination of patients under the supervision of an examiner. The manner of examining patients, and the reasoning and deductions therefrom will constitute an important part of the examination. Knowledge of basic science principles, special diagnostic procedures, and management recommendations and risks are also essential parts of this examination, which is focused upon evaluation of clinical skills.

Candidates are expected to discuss the patient and their findings with their examiner. Questions frequently cover such areas as diagnosis, differential diagnosis, treatment, prognosis and management. Reference to the basic sciences of Psychiatry and Neurology may be made. Candidates who successfully complete the Part I will have the following Part II examination schedule:

Psychiatry candidates will take three examinations:

- 1 one-hour examination in Clinical Psychiatry (live patient)
- 1 one-hour examination in Clinical Psychiatry (audio-visual)
- 1 one-hour examination in Clinical Neurology (audio-visual)

In the patient section, the Psychiatry candidate will be given 30 minutes to examine a patient under the supervision of one or more examiners. Following the examination of the patient, the candidate will be examined by one or more examiners. This section will stress physician-patient interaction, conduct of the clinical examination, capacity to elicit clinical data, formulation, differential diagnosis and prognosis, therapeutic management and knowledge of therapies. Additional questions may be addressed to the basic science of Psychiatry.

The Psychiatry audio-visual section will consist of a 20-minute video-taped psychiatric examination which the candidate will observe. Candidates will then be individually examined by one or more examiners with particular reference to the content of the tape.

Beginning at the October, 1977, Part II examination the previously administered one hour of oral examination in Neurology for Psychiatry candidates will be replaced by a written examination. The written examination is based on a series of audio-visual vignettes of neurologic patients. Each vignette will last for approximately three to four minutes and will be followed by written, multiple choice examination questions pertinent to the brief patient presentation. Thus, there will be no examiner involvement or patient contact in this section.

Neurology candidates will take four examinations:

- 1 one-hour examination in Clinical Psychiatry (live patient)
- 1 one-hour examination in Clinical Neurology (live patient)
- 1 one-hour examination in Clinical Neurology (audio-visual)
- 1 one-hour examination in Child Neurology (audio-visual)

Child neurology candidates will take four examinations:

- 1 one-hour examination in Clinical Psychiatry (live patient)
- 1 one-hour examination in Clinical Neurology (audio-visual)
- 1 one-hour examination in Child Neurology (live patient)

Psychiatry and Neurology

1 one-hour examination in Child Neurology (audio-visual)

In the Psychiatry patient section, the examination will follow the same format as outlined for the patient section for Psychiatry candidates.

In the Neurology and Child Neurology patient sections, the candidate will be given 30 minutes to examine the patient under the supervision of one or more examiners. During the conduct of the examination, the candidate's ability to obtain an adequate history and perform a neurological examination will be observed. Following the examination of the patient, the 30-minute discussion with the examiner will focus on the evaluation of the findings and discussion of the diagnosis, treatment, and management. The examiners may also ask additional questions concerning the basic science of the particular section.

In the audio-visual sections, the candidate will observe a video-taped neurological examination and interview. Candidates will then be individually examined by one or more examiners with particular reference to the content of the tape.

All successful Part I candidates will receive a notice of assignment to a Part II together with a request to submit the required examination fee. Scheduling for the Part II examination will be made as much as possible, on a regional basis. Candidates who fail to take Part II as scheduled by the Board will lose their eligibility. They will be regarded as new applicants should they wish to reapply for the Part II examination.

The limited space available and the complicated logistics involved in administering the Part II make it impossible for the Board to allow candidates to select either the site or the date for examination. It is the candidate's privilege to decline the assigned examination, but there is no guarantee that another date or location will be available within the year's examination cycle.

Candidates who do not pay the Part II examination fee for their scheduled examination by the deadline specified, will be removed from the roster of candidates for that Examination. Such candidates will be required to submit a Part II application and the examination fee in order to be scheduled for a future Part II examination.

Candidates who pay their Part II examination fee but fail to appear at their scheduled Part II examination, will forfeit the fee. Such candidates will be required to submit a Part II application and new examination fee in order to be scheduled for a future Part II examination.

One month prior to the date of his or her Part II examination, a candidate will receive informational materials and an admission notice specifying the time and date to report for registration. Candidates are requested to report for registration only at the time indicated on the admission notice. Registration schedules are arranged to accommodate candidates in accordance with their examination schedules.

The Board office is unable to provide information concerning specific examination schedules prior to registration.

The current regulations for failure of the Part II examination are as follows:

FOR CERTIFICATION IN**Psychiatry**

2 hours Clinical Psychiatry (major)
1 hour Clinical Neurology (minor)

*Complete Failure = Fails 1 or 2 hours major and 1 hour minor

**Partial Failure = Fails 1 or 2 hours major
or
Fails 1 hour minor

Neurology

2 hours Clinical Neurology (major)
1 hour Clinical Psychiatry (minor)
1 hour Child Neurology (minor)

*Complete Failure = Fails 1 or 2 hours major and 2 hours minor

**Partial Failure = Fails 1 or 2 hours major and/or fails
1 hour minor
or
Fails 2 hours minor

Neurology with Special Competence in Child Neurology

2 hours Child Neurology (major)
1 hour Clinical Psychiatry (minor)
1 hour Clinical Neurology (minor)

*Complete Failure = Fails 1 or 2 hours major and 2 hours minor

Fails 1 or 2 hours major and/or fails
1 hour minor

or
Fails 2 hours minor

POLICY FOR RETAKING OF PART II EXAMINATION**A. For Psychiatry Candidates**

1. A candidate for certification in Psychiatry who passes both Psychiatry sections of his/her Part II examination need not repeat this part of the examination within seven (7) years following the date of successful completion of the Part I examination.

To pass the Psychiatry portion of the Part II examination, the candidate in Psychiatry must achieve final passing grades on both Psychiatry sections of the examination.

2. A Psychiatry candidate who fails one or both sections of the Psychiatry examination must take two hours of examination in Psychiatry at each subsequent examination until he/she passes both sections or until the expiration of the 7-year period following successful completion of the Part I examination.

3. Any candidate for certification in Psychiatry who passes the Neurology portion of his/her Part II examination need not repeat the Neurological portion of the examination within a period of seven (7) years following the successful completion of the Part I examination.

B. For Adult Neurology Candidates

1. A candidate for certification in Adult Neurology who passes both sections of his/her Adult Neurology portion of the Part II examination need not repeat this part of the examination within a period of seven (7) years following the date of successful completion of the Part I examination.

To pass the Adult Neurology portion of the Part II examination, the candidate in Adult Neurology must achieve final passing grades on both Adult Neurology sections of the examination.

2. Candidates in Adult Neurology who fail one or both sections of the Part II Adult Neurology examination must take two hours of Adult Neurology at all subsequent Part II examinations until he/she passes both sections or until the expiration of the 7-year period following successful completion of the Part I examination.

3. The candidate for certification in Adult Neurology who passes the Psychiatry portion of the Part II examination need not repeat this part of the examination within a seven (7) year period following successful completion of the Part I examination.

The same provision applies to Adult Neurology candidates who pass the Child Neurology portion of the examination.

C. For Neurology with Special Competence in Child Neurology Candidates

1. The candidate in Child Neurology who passes both sections of his/her Child Neurology portion of the Part II examination need not repeat this part of the examination within a period of seven (7) years following the date of successful completion of the Part I examination.

*A candidate who fails his/her entire initial Part II examination according to the regulations outlined above for COMPLETE FAILURE, must upon re-examination repeat the entire Part II examination and pass all subjects in which he/she is being re-examined.

**A candidate who fails a portion of his/her initial Part II examination according to the regulations outlined above for PARTIAL FAILURE, must upon re-examination pass all subjects in which he/she is being re-examined.

To pass the Child Neurology portion of the Part II examination the candidate in Child Neurology must achieve final passing grades on both Child Neurology sections of the examination.

2. Candidates in Child Neurology who fail one or both sections of the Part II Child Neurology examination must take two hours of Child Neurology at all subsequent Part II examinations until he/she passes both sections or until the expiration of the 7-year period following successful completion of the Part I examination.

3. The candidate for certification in Child Neurology who passes the Psychiatry portion of the Part II examination need not repeat this part of the examination within a seven (7) year period following successful completion of the Part I examination.

The same provision applies to Neurology with Special Competence in child Neurology candidates who pass the Adult Neurology portion of the examination.

This policy applies to all candidates who have passed the Part I (written) examination since April, 1969, or later. Candidates who have previously failed the Part II examination and who do not now have an active Part II application on file, must submit a Part II application to the Executive Office of the American Board of Psychiatry and Neurology, Inc. in order to be scheduled for a Part II examination under the new policy.

The candidate's most recent pass on the Part I examination will be considered the effective date for the beginning of the seven (7) year period.

REAPPLICATION FOR PART II EXAMINATION

Candidates submitting the Part II application will be scheduled for examination within one year, and possibly longer, from the date the Part II application is received in the Board office. Candidates will be scheduled for examination based on space availability and order of receipt of application. Invitations will be sent at least two to three months prior to the scheduled examination. A request for the examination fee will be made at that time. The examination fee should not be sent with the application. Candidates will be regarded as *new applicants* should they wish to apply for the Part II examination.

Candidates may choose to decline two invitations to Part II examinations. If the third invitation is declined, the candidate will be required to submit a new Part II application and will be placed at the end of the waiting list once the application is received in the Board office. Candidates should be aware of the expiration date of their passing the Part I examination. If the seven year limit expires prior to the candidate's submission of the Part II application, the candidate will be required to submit a new Part I application and fee and retake the Part I examination.

Supplementary Certification

A candidate who has been certified in either Psychiatry or Neurology may apply for supplementary certification in the other specialty upon submission of a new application and application fee. If the credentials for such other certificate are acceptable to the Board, the candidate thereupon becomes eligible to take Part I and Part II examinations in the supplementary subject.

Candidates who have achieved certification in Neurology and are desirous of gaining certification in Neurology with Special Competence in Child Neurology shall be required to take two one-hour examinations in Child Neurology during the Part II examinations. Such candidates will not be required to retake the Part I examination in Neurology.

Candidates should note that certification in one specialty must be obtained before the Board can consider an application for certification in the supplementary subject. The Board cannot maintain two active applications simultaneously.

APPLICATION FOR CERTIFICATION IN CHILD PSYCHIATRY

An applicant who wishes to be certified in Child Psychiatry shall complete, sign and file with the Executive Director of the

Board an application on the official form together with the required supporting data. Applications may be obtained from the Executive Director. The application shall be accompanied by a check payable to the Board for \$150.00. No part of this fee is refundable.

No application will be considered until the fee and all required data have been received by the Executive Director. *The application, supporting data and fee must be received by the Board no later than the October 1 preceding the Spring examination for which the candidate is applying.*

Determinations of applicants' eligibility will be made in accordance with the rules and regulations of the Board.

General Requirements

Each applicant for certification in Child Psychiatry must comply with the following requirements:

(a) He or she must have been certified by the Board in the specialty of general Psychiatry prior to submitting an application for examination in Child Psychiatry. He or she must at all times continue to meet all requirements of the Board for certification in general Psychiatry.

(b) He or she must have satisfactorily completed the Board's specialized training requirements in Child Psychiatry.

Training Requirements

All candidates beginning their specialized training in Child Psychiatry after June 30, 1965, must have two years of training in child psychiatric centers approved by the Committee in conjunction with the Residency Review Committee for Psychiatry and Neurology. All training must be completed in the U.S. No credit will be given for training done less than half-time.

Ordinarily the exposure to child psychiatry given to most general psychiatry residents as part of their basic psychiatric curriculum will not qualify for this credit.

The two years of specialized training in Child Psychiatry are usually taken at one center, but may be taken at no more than two centers. If training is taken at two centers (as when the candidate engages in specialized training in Child Psychiatry during his or her training in basic Psychiatry), the training director of each center must evaluate the candidate's training in that center.

The training director of the second center is responsible for ensuring that the *total two years* of the candidate's specialized Child Psychiatry training in the *combined program* is balanced to meet the essentials of the second training program as they have been described and submitted to the Board. A minimum of one year of training must be taken at the second center.

Candidates who have completed at least one year of approved pediatric training at RESIDENCY level (PL-2 and beyond the categorical PGY-1 or PL-1 year) after July 1, 1960, may be granted up to six months' credit toward Child Psychiatry training requirements. The six months' credit may be granted if the director of the Child Psychiatry training program recommends such credit, and if the candidate completes a minimum of one year of training in that Child Psychiatry program (in the event that training is split between two Child Psychiatry training programs). This recommendation should be set forth in the form of a letter from the director of the training program to the Child Psychiatry trainee. A copy should be attached to the application for examination in Child Psychiatry. This letter should specify the following:

(1) The exact dates of the pediatric training for which Child Psychiatry training credit is being granted and the pediatric residency program in which this training was obtained;

(2) The exact number of months of credit being granted toward Child Psychiatry training.

Thus, the following patterns of specialized training in Child Psychiatry are acceptable:

(1) Two years of training in basic Psychiatry, plus two years of training in Child Psychiatry;

(2) Two years of training in basic Psychiatry and at least 18 months of training in Child Psychiatry, plus up to (but not more than) six months of Child Psychiatry training credit for

Psychiatry and Neurology

one year of pediatric training at RESIDENCY level (PL-2 and beyond the categorical PGY-1 or PL-1 year). The total minimum amount of Child Psychiatry training is TWO FULL YEARS.

Any trainee or potential trainee in Child Psychiatry who contemplates a training program at variance with one of the above training patterns is advised to submit his or her proposed training sequence to the Executive Director of the Board. This should be done before beginning Child Psychiatry training, or as early as possible thereafter, in order to allow for an advisory opinion of the Committee as to whether the proposed training is likely to meet requirements for admission to examination.

The applicant should obtain from his or her training director(s) a statement certifying satisfactory completion of the training requirements during the period for which training credit was granted.

The Committee may require, at its discretion, the publications of the applicant and/or a series of case reports of children treated by the applicant, as part of the qualifications of eligibility for examination for Certification in Child Psychiatry.

Program for Special Training and Qualifications (PSTQ)

The purpose of this program is to admit to examination those few exceptionally qualified candidates whose training and experience have been unusual because of the individualized research and clinical training features of their careers. The standard of performance at examination is the same as for candidates with conventional training.

A candidate must be nominated by a director of a training program approved by the Residency Review Committee for Psychiatry and Neurology. The program director must be from the institution where the candidate had a substantial portion of his or her training experience, or where he or she has a current professional appointment. The director must justify the unique but adequate character of the candidate's training program, and must describe in detail the candidate's clinical experience and competence, as well as his or her professional goals and accomplishments. The candidate must have completed at least five years of training, and evidence must be submitted showing that he or she has had satisfactory direct responsibility for patient care in the field of specialization. In addition to the usual application form, the candidate's curriculum vitae, bibliography, and reprints should be submitted for consideration. Each nomination for this PSTQ plan will be considered on an individual basis by the Credentials Committee, the Committee on Certification in Child Psychiatry and the Board of Directors.

Application and Fees

Applicants shall make application on official forms. Such applications must be accompanied by an application fee of \$150.00. This fee is not refundable.

Those applicants accepted for examination will be notified and scheduled for examination. The examination fee of \$350.00 (\$250.00 for the oral examination, \$100.00 for the written examination) is payable when such payment is requested by the Executive Director of the Board.

Should the applicant be found not eligible for examination he or she will be notified of his or her deficiencies. Applications submitted before November 30, 1975 will remain valid for two years from the date of submission. After this period, the application expires. Applicants must submit a new application and pay a new application fee to receive further consideration.

Applications remain active for one year only. Candidates who fail to present themselves for the next scheduled examination following the date of submission of their applications will be required to submit a new application and pay a new application fee.

Applicants who submit their applications at the last minute risk achieving eligibility for the following examination because verification of their credentials has not been received in time.

Examinations

Examinations are given once a year in March. These will be oral and written examinations and will include examination in all areas relating to normal personality development and pathological deviations from infancy through adolescence. The examinations will cover any area of developmental disturbance, etiological mechanisms, and therapeutic measures and planning. Knowledge and critical understanding of the history and literature of Child Psychiatry as they apply to practice in the field will constitute a part of the examination. The utilization of psychological testing, contributions of collaborative personnel, and types of social planning will be included in the examination. A major part of the examination will assess the candidate's ability to reason from the material presented to him or her, to formulate a differential diagnosis, and to organize a practical program of therapy and management from these data.

The examination consists of a written examination, covering all areas of Child Psychiatry noted above, plus the following four oral examinations:

- 1) A 45-minute examination on the preschool child;
- 2) A 45-minute examination on the grade-school child;
- 3) A one-hour examination on the adolescent;
- 4) A 45-minute examination on community Child Psychiatry and interprofessional relations.

The examination on the preschool child is based on short, videotaped observations of a preschool child. The examination on the grade-school child is based on short excerpts from a videotaped interview of a child. Candidates are evaluated on their ability to observe and describe the most significant behaviors of the child and to determine the additional data they need in order to formulate a differential diagnosis and treatment plan.

The examination on the adolescent will include the psychiatric examination of an adolescent under the supervision of an examiner. This might be an adolescent psychiatric patient or an adolescent volunteer. The manner and process of interviewing the adolescent and the reasoning and deductions therefrom, including differential diagnosis and treatment plan, will constitute an important part of the examination.

The examination on community child psychiatry and interprofessional relations will include discussion to show that the candidate is familiar with community resources and can facilitate their utilization. Discussion should further show that the candidate understands the principals of consultation and working appropriately with other professional disciplines. Community-oriented clinical vignettes will also be used to assess these abilities. These short vignettes will focus on consultation to pediatric professionals, schools, courts and social agencies. Questions may also be asked about consultative problems such as child abuse, psycho-physiological disorders, delinquency and learning disabilities.

The current regulations for failure or condition of the examination for certification in Child psychiatry are as follows:

- Failure:** Fails two (2) or more oral sections of examination
Fails two (2) or more oral sections of the written examination
A candidate who fails the examination must upon re-examination repeat the entire examination including the written examination unless it has been specified that the written examination has been passed.
- Condition:** Fails one (1) oral section of the examination and/or the written examination
A candidate who conditions the examination must upon re-examination repeat only the section(s) conditioned.

Effective with the February, 1978 examination passage of the written examination is valid for a period of seven (7) years.

Effective with the February, 1980 examination passage of *all portions* of the oral examination is valid for a period of four (4) years.

According to the regulation of the Committee on Certification in Child Psychiatry, candidates who are unsuccessful in their initial examination must appear for the next Child Psychiatry examination as scheduled. Should a candidate elect to decline the scheduled re-examination, he/she would be required to request and submit a new application and application fee in order to pursue certification.

According to the regulations of the Committee on Certification in Child Psychiatry, candidates who are unsuccessful in their re-examination must request and submit a new application and application fee in order to pursue certification.

PLEASE NOTE THE CHANGE IN THE DEADLINE FOR SUBMITTING APPLICATIONS. All applications must be received by the Board office no later than *October 1* of the year preceding the examination.

Candidates who fail only the written examination will be given a choice of sites at which they may sit for re-examination. In order to alleviate the need for candidates to travel great distances to repeat the written examination, the Committee on Certification in Child Psychiatry will establish testing centers based on the distribution of eligible candidates. Candidates will be advised of the location of such testing centers and be given a choice of sites several months prior to the examination. This option applies solely to those candidates who must repeat only the written examination.

Any candidate who finds himself or herself unable to attend an examination to which he or she has been admitted and who fails to notify the Executive Director of the Board at least three (3) months before the date of the examination will forfeit the examination fee and the application fee. Such candidates must submit a new application and application fee. In the event that an urgent situation develops which makes it impossible for the candidate to attend an examination, an exemption from this ruling may be requested. Candidates should contact the Executive Director.

Appeal Procedure for Negative Determinations Regarding Applications or Examinations

An applicant whose application for admission to examination for certification has been rejected or a candidate who has received a failing grade on the examination may appeal such rejection or failure (both of which are hereafter called "negative determinations") by complying with the following procedures.

1) Within twenty (20) days after receiving notice of a negative determination, the applicant or candidate must give written notice of appeal to the Review Committee of the Committee on Certification in Child Psychiatry (hereafter called the "Committee") at the address specified in (5) below. Information tending to rebut the negative determination must be received within forty-five (45) days after receiving notice of a negative determination.

2) If the applicant or candidate requests the opportunity to appear personally or by counsel before the Review Committee, he shall be permitted to do so; however, such an appearance will not be scheduled until after submission of the written information required in (1) above. At any such appearance, the applicant or candidate will be given an opportunity to present his position and to cross-examine any adverse witnesses. A transcript of the proceedings will be kept. The Review Committee will not be bound by technical rules of evidence usually employed in legal proceedings, but may consider evidence it deems appropriate.

3) If the Review Committee decides to affirm the negative determination in question, it will notify the applicant or candidate in writing of its decision, the basis therefore, and of the applicant's or candidate's right to appeal the decision to the Committee within twenty (20) days.

4) If the applicant or candidate appeals the decision of the Review Committee to the Committee, the Committee will review all of the evidence considered by the Review Committee. However, the Committee will not consider any evidence, written or oral, that was not presented to the Review Committee. If the Committee disagrees with the decision of the

Review Committee, it may reverse the decision or remand the matter to the Review Committee for further consideration with precise instructions as to the basis of such reconsideration. The applicant or candidate will be informed in writing of the Committee's decision which, in all events, will be final and binding on the Committee and on the applicant or candidate.

5) All notices or other correspondence directed to the Review Committee or to the Committee should be sent to the following address:

Committee on Certification in Child Psychiatry,
American Board of Psychiatry and Neurology, Inc.,
One American Plaza,
Suite 808,
Evanston, Illinois 60201

Amendment of Rules and Regulations

The Board of Directors has authority to issue and amend from time to time, rules and regulations relating to the issuance and revocation of certificates in Child Psychiatry.

Revocation of Certificates

All certificates issued by the Board shall be issued subject to the provisions of its Certificate of Incorporation, Bylaws and Rules and Regulations. The Board has authority to revoke any certificate issued by it or to place a certificate-holder on probation for a fixed or indefinite time, in accordance with the rules and regulations of the Board, on the following grounds:

(a) The certificate was issued contrary to or in violation of its Bylaws or Rules and Regulations;

(b) The person to whom the certificate was issued was not eligible to receive, or has since become ineligible to hold, the certificate;

(c) The person to whom the certificate was issued made any material misstatement or omission of fact to the Board in his/her application or otherwise;

(d) A license to practice medicine of the person to whom the certificate was issued is forfeited, revoked or suspended.

AMERICAN BOARD OF RADIOLOGY

- E. Richard King, President, Richmond, Virginia
- Harold Jacobson, Vice President, New York City
- Jerome F. Wiot, Treasurer, Cincinnati, Ohio
- Kenneth L. Krabbenhoft, Assistant Secretary, Detroit
- Luther W. Brady, Philadelphia
- James H. Christie, Albuquerque
- Robert N. Cooley, Galveston, Texas
- Juan A. del Regato, Tampa, Florida
- John M. Dennis, Baltimore, Maryland
- Theodore E. Keats, Charlottesville, Virginia
- Eugene C. Klatt, Indianapolis
- Richard G. Lester, Houston, Texas
- Seymour H. Levitt, Minneapolis
- Robert W. McConnell, Houston, Texas
- Sidney W. Nelson, Seattle, Washington
- Robert G. Parker, Los Angeles
- Paul A. Riemenschneider, Santa Barbara, California
- Norah duV. Tapley, Houston, Texas
- C. Allen Good, Secretary, Kahler East, Rochester, Minnesota 55901

Certificates

A certificate will be issued to each candidate who has finished a prescribed and approved period of training and study and has passed an examination demonstrating an adequate level of knowledge and ability in Diagnostic Radiology, Diagnostic Radiology with Special Competence in Nuclear Radiology, and Therapeutic Radiology in accordance with the definitions as stated in the Bylaws.

A certificate granted by the Board does not of itself confer, or purport to confer, any degree, or legal qualifications, privileges, or license to practice Radiology.

Definitions

- 1. *Diagnostic Radiology* is that branch of Radiology which deals with the utilization of all modalities of radiant energy for

Radiology

the image portrayal of human morphology and physiologic processes in medical diagnosis. This includes the use of radionuclides, infrared rays and ultrasonic waves in such diagnostic studies.

2. *Nuclear Radiology* is a clinical sub-specialty of Radiology involving the imaging by external detection of the distribution of radionuclides in the body for the diagnosis of disease.

3. *Therapeutic Radiology* is that branch of Radiology which deals with the therapeutic application of ionizing radiation including roentgen and gamma rays as well as particulate radiation from whatever source including artificially and naturally radioactive materials as well as X-ray generators and particle accelerators.

Certification

Each applicant for admission to an examination of this Board must present evidence that he has fulfilled the following requirements.

A. General Qualifications:

That the applicant is a specialist in Diagnostic Radiology, Diagnostic Radiology with Special Competence in Nuclear Radiology, and/or Therapeutic Radiology as stated in the Bylaws.

B. General Professional Education:

Graduation from a medical school recognized by the Council on Medical Education of the American Medical Association or from a school of Osteopathy. If the applicant is a graduate of a medical school outside the United States or Canada, the applicant must be screened with approval by an agency approved by the Board of Trustees.

C. Special Training

After graduation from medical school there shall be a period of special training. This period of special training shall be as the Board of Trustees by resolution or motion shall determine from time to time.

The Board of Trustees may at its discretion require a recommendation from the program director to the effect that the applicant has satisfactorily completed the prescribed special training and is prepared to take the examination.

D. In special instances these requirements may be modified by majority vote of the Board of Trustees.

Diagnostic Radiology

1. Candidates beginning their training in Diagnostic Radiology after June 30, 1975 and who have not had an approved internship will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in Diagnostic Radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Liaison Committee on Graduate Medical Education. The other year may be spent in one of the following programs: a categorical year; a categorical* year; a flexible year; a year of approved residency in Radiology or one of its branches; or in a year of another approved specialty. No credit will be allowed for a foreign internship.

2. Candidates beginning their training in Diagnostic Radiology after June 30, 1983 will be required to have four years of approved postgraduate training. In order to enter an approved residency in Diagnostic Radiology, the individual must spend one full year (12 months) in a clinical field of medicine in an institution approved for such training by the Liaison Committee on Graduate Medical Education (LCGME). The individual may then begin his residency in Diagnostic Radiology in a program approved by LCGME. The length of the residency should be at least three years (36 months).

Candidates in this category will be eligible for the written examination when they have completed 36 of the required 48 months of approved training, or if they will have completed this amount by the end of the month in which the examination is given.

Candidates must receive training in Nuclear Radiology. Time spent in Nuclear Radiology may not exceed twelve months. A maximum of three months may be spent in Therapeutic Radiology.

Candidates may expect to be asked questions concerning computed tomography (CT) and ultrasound on both the written and oral examinations. Beginning in 1980 the grades obtained in CT and ultrasound will be used in determining the final results of the examinations.

Diagnostic Radiology with Special Competence in Nuclear Radiology

1. The American Board of Radiology will give a special examination leading to a certificate in Diagnostic Radiology with Special Competence in Nuclear Radiology to those diplomates in Radiology, Roentgenology, Diagnostic Radiology or Diagnostic Roentgenology who have fulfilled the requirement of one full year of formal residency or fellowship training in Nuclear Radiology.

2. Continuing its policy adopted in June, 1979 the Board will give a regular examination consisting of at least nine examiners (ten if candidate previously failed Physics in the written examination). The subjects to be covered are: Bones and Joints, the Chest, the Gastrointestinal Tract, the Genitourinary Tract, Neuroradiology, Nuclear Radiology (three examiners) and Cardiovascular Radiology, to candidates who have not been previously certified, who have passed the written examination in Diagnostic Radiology, and who will have completed four years of approved postgraduate education in this country or Canada, three years of which have been spent in residency training comprising at least twenty-four months of Diagnostic Radiology and its subspecialties and twelve months in Nuclear Radiology.

3. Candidates beginning their training in Diagnostic Radiology with Special Competence in Nuclear Radiology July 1, 1980 or thereafter will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in Diagnostic Radiology with Special Competence in Nuclear Radiology by the Residency Review Committee for Radiology representing the American Board of Radiology and the Council on Medical Education of the American Medical Association and accredited by the Liaison Committee on Graduate Medical Education.

4. Candidates beginning their training in Diagnostic Radiology with Special Competence in Nuclear Radiology after June 30, 1983 will be required to have four years of approved postgraduate training. In order to enter an approved residency in Diagnostic Radiology with Special Competence in Nuclear Radiology, the individual must spend one full year (12 months) in a clinical field of medicine in an institution approved for such training by the Liaison Committee on Graduate Medical Education (LCGME). The individual may then begin his residency in Diagnostic Radiology with Special Competence in Nuclear Radiology in a program approved by LCGME. The length of the residency should be at least three years (36 months).

Therapeutic Radiology

1. Candidates beginning their training in Therapeutic Radiology after June 30, 1975 and who have not had an approved internship will be required to have four years of approved postgraduate training. Three of these years must be spent in a department approved to train in Therapeutic Radiology by the Residency Review Committee for Radiology representing The American Board of Radiology and the Council on Medical Education of the American Medical Association. The other year may be spent in one of the following programs: a categorical year; a categorical* year; a flexible year; a year of approved residency in Radiology or one of its branches; or in a year in another approved specialty. No credit will be allowed for a foreign internship.

2. Candidates beginning their training in Therapeutic Radiology after June 30, 1983 will be required to have four years of approved postgraduate training. In order to enter an

approved residency in Therapeutic Radiology, the individual must spend one full year (12 months) in a clinical field of medicine in an institution approved for such training by the Liaison Committee on Graduate Medical Education (LCGME). The individual may then begin his residency in Therapeutic Radiology in a program approved by LCGME. The length of the residency should be at least three years (36 months).

Candidates in this category will be eligible for the written examination when they have completed 36 of the required 48 months of approved training, or if they will complete this amount by the end of the month in which the examination is given.

3. The three-year residency training period must include training in Pathology and training in the Therapeutic aspects of Nuclear Medicine. Credit may not exceed three months for time spent in either subject. A maximum of three months' training in Diagnostic Radiology will be allowed.

Foreign Candidates

Citizens of foreign countries who have had previous training in Radiology outside of the United States or Canada are required to take at least two years formal residency training in an approved Department of Radiology or Therapeutic Radiology in this country or Canada in order to qualify for admission to examination, except in those individual cases where the Board of Trustees rules otherwise or the Executive Committee is requested to act in its stead.

Application and Fee

Application for examination must be made in duplicate on forms which may be obtained from the Secretary. (One application will suffice for both the written and the oral examinations.) These forms shall be forwarded with the required data, two unmounted photographs autographed on the front, and the application fee of \$450.00 (U.S. Currency) by the deadline established for filing. Checks should be made payable to THE AMERICAN BOARD OF RADIOLOGY, INC. THE DEADLINE FOR FILING FOR EITHER THE WRITTEN OR THE ORAL EXAMINATIONS IN ANY GIVEN YEAR IS SEPTEMBER 30 OF THE PRECEDING YEAR. The application fee (noted above) will cover both the written and the oral examinations provided the candidate is successful in the written examination.

A candidate who finds it necessary for any reason to cancel after his notification for an appointment for either the written or oral examination shall be required to submit an additional fee of \$100.00. This amount represents administrative costs to the Board.

A candidate who does not accept an appointment for examination within three years after becoming eligible, except for legitimate reason, shall be required to submit another application and an application fee. In addition, he shall be required to take and pass the written examination before again being given the opportunity of taking the oral examination. (Not applicable if candidate previously passed written examination.)

If a candidate withdraws his application, \$295.00 will be retained for processing.

WRITTEN EXAMINATION

Written examinations are given at a time designated by the Board of Trustees.

Eligibility for the written examination is determined by the Executive Committee.

Objectives of the Written Examination

In 1965 it became apparent to the Board of Trustees of The American Board of Radiology that the then current oral examination could not cover the entire burgeoning field of Radiology without the addition of more segments, and in turn more examiners. This would not only impose a further burden on the candidates but also on the Board itself. It was decided, therefore, to search for other methods of examination. At that time, it was agreed to adopt a written examination to be given

once each year as a prerequisite for the oral examination. The content of the examination was to include the basic sciences of anatomy, pathology, physiology and pharmacology as these subjects relate to its clinical practice. Also to be included were roentgenologic technique, radiological physics, and radiation biology.

The content of the examination in Therapeutic Radiology was to include the basic sciences of physics, radiation biology, and clinical oncology as well as anatomy, pathology, physiology and chemotherapy as these subjects relate to the clinical practice of Therapeutic Radiology.

With the help of many radiologists who were not Trustees of the Board and with the assistance of the National Board of Medical Examiners, a pool of multiple-choice questions was developed and the first examination was given in 1969 to all candidates seeking certification in Diagnostic Radiology and in Therapeutic Radiology.

Content of Written Examination in Each Field

Each examination consists of between 300 and 350 multiple-choice questions to be administered over a period of approximately eight hours. About one-half of the questions are contained in the test booklet to be distributed on the afternoon of one day and the other half in the test booklet distributed on the morning of the following day.

New written examinations are formulated each year in all categories of Radiology and the content of the examinations is carefully evaluated in order to keep pace with new information and developments. Even the number of questions in each category may be changed as necessity dictates from year to year.

ORAL EXAMINATION

Oral examinations are given at a time designated by the Board of Trustees.

Eligibility for the oral examination is determined by the Executive Committee. Experience has shown that to delay taking the oral examination does not benefit the candidate.

Content of Oral Examination

In general, the examination consists of film interpretation, problems regarding the clinical application of roentgen rays, radium, and radionuclides, and questions in pathology, physiology, radiobiology, and radiological physics. (Inclusion of the latter subject will be contingent upon the results of the written examination.)

Re-examinations

Failures

A candidate who fails or conditions his first examination in Diagnostic Radiology or in Therapeutic Radiology may be reexamined in one year. The required fee of \$250.00 must be submitted.

A candidate who fails to accept an appointment to appear for re-examination within three years after it is offered, must submit a new application and application fee. In addition, he (or she) shall be required to take and pass the written examination before again being given the opportunity of taking the oral examination. (Not applicable if candidate previously passed the written examination.)

A candidate who has had three consecutive failures in Diagnostic Radiology or in Therapeutic Radiology may not appear for re-examination within two years after the date of the last previous examination. During this two-year interval, he (or she) shall be required to have received at least twelve months' additional formal residency training or submit evidence that he (or she) has spent twelve months or more full time in a department approved for residency training in Diagnostic Radiology or in Therapeutic Radiology. In addition, the candidate shall be required to update his (or her) application, submit the re-examination fee, and take the written examination if he (or she) had not been previously required to do so.

Surgery

A candidate who has had *four* consecutive failures in Diagnostic Radiology or in Therapeutic Radiology may not appear for re-examination within *three* years after the date of the last previous examination. During this three-year interval, he (or she) shall be required to have received at least twenty-four months' additional formal residency training or submit evidence that he (or she) has spent twenty-four months or more full time in a department approved for residency training in Diagnostic Radiology or in Therapeutic Radiology. In addition, he (or she) shall be required to update his (or her) application, submit the re-examination fee, and take the written examination if he (or she) had not been previously required to do so.

Status of a Physician

The Board will reply to an inquiry concerning the status of a physician with one of the following statements:

1. This physician is Board certified.
2. This physician is in the examination process.
3. This physician is neither certified nor in the examination process.

Final Action of the Board

The final action of the Board is based on the applicant's professional record, training, and attainment in the field of Diagnostic Radiology or in Therapeutic Radiology, as well as on the results of his examination. This Board has been organized, not to prevent qualified radiologists from obtaining certificates, but to assist them in becoming recognized in their communities as men and women competent to practice Diagnostic Radiology and/or Therapeutic Radiology.

Revocation of Certificates

Certificates issued by this Board are subject to the provisions of Articles of Incorporation and the Bylaws. According to Article IX, Section 4, of the Bylaws, "Any certificate issued by the Board of Trustees shall be subject to revocation in the event that:

- (a) The issuance of such certificate or its receipt by the individual so certified shall have been contrary to or in violation of any provision of the Certificate of Incorporation of this, The American Board of Radiology, or of these Bylaws or rules and regulations adopted by the Board of Trustees; or
- (b) The individual so certified shall not have been eligible in fact to receive such certificate; or
- (c) The individual so certified shall have made any misstatement of fact in the application or in any other communication to the Corporation or its representatives; or
- (d) The individual so certified shall have been convicted by a court of competent jurisdiction of a felony or of any misdemeanor involving, in the opinion of the Board of Trustees, moral turpitude; or
- (e) The license to practice medicine of the individual so certified shall be revoked.

Before any such certificate shall be revoked a notice shall be sent by registered or certified mail to the last known address of the holder of such certificate, as it appears on the records of this Corporation, setting forth the act, omission or conduct alleged or complained of, and giving the holder of such certificate a reasonable opportunity to answer in writing thereto. Such certificate holder shall have not less than 30 days in which to reply thereto. The Board of Trustees may at its discretion make such further investigation as it deems necessary and proper.

The Board of Trustees of this Corporation shall have the sole power, jurisdiction and right to determine and decide whether or not the evidence or information before it is sufficient to constitute one of the grounds for revocation of any certificate issued by this Corporation, and the decision of such Board of Trustees in the premise shall be final."

All correspondence should be addressed to the Secretary:

**Specialty of Surgery
("General Surgery") Defined**

The Board interprets the term "general surgery" in a comprehensive but still specific manner. Candidates for examination are expected to have a detailed knowledge of surgery of the alimentary tract, of abdominal conditions, of the breast, of the head and neck, of the peripheral vascular system, of the endocrine system; and of the surgical management of trauma including musculoskeletal and head injuries. In addition they are expected to possess an adequate breadth and depth of understanding of the principles of and experience in the more common problems in cardiothoracic, gynecologic, neurologic, orthopaedic, plastic, pediatric and urologic surgery.

**Requirements for Admission to the
Examinations for General Certification in Surgery****I. General Qualifications**

Candidates must have demonstrated competence in surgery, have an ethical standing in the profession and a moral status in the community which are satisfactory to the Board, and be actively engaged in the practice of Surgery.

II. Minimal Education Requirements

A. Preliminary

Graduation from an approved school of medicine granting an M.D. degree in the United States or Canada. Graduates of medical schools in other countries must have completed the requirements as promulgated in June 1971 by the Council on Medical Education of the American Medical Association in its "Policy on Eligibility of Foreign Medical Graduates for Admission to American Medical Education," namely: (1) certification by ECFMG or (2) unrestricted licensure to practice medicine issued by a state or other United States jurisdiction, or (3) if a United States citizen, passing the complete licensing examination in a state or jurisdiction which will issue full licensure upon satisfactory completion of internship or residency in that state without further examination, or (4) if premedical education was in the United States and the academic curriculum was completed in residence in a foreign medical school, completion of an "academic year of supervised clinical training" in an approved program in a medical school in the United States as a substitute for an internship required by a foreign medical school.

B. Graduate Education in Surgery

1. General Information

The fundamental concept of graduate education in surgery is that there must be a properly organized and progressively graded clinical experience which provides the opportunity under guidance and supervision to grow in competence by progressive and succeeding stages of responsibility for patient care. Major operative experience and senior/chief responsibility are essential components of surgical education. The Board will not accept a candidate for examination who has not had such experience in general surgery, regardless of the number of years spent in educational programs.

The Board requires that a candidate must have completed a "bona fide" senior/chief year of residency in an accredited program in general surgery in a manner satisfactory to the Board in order to be considered for admission to the examinations. The senior/chief appointment must be the final clinical year of the program as accredited.

The graduate educational requirements set forth in these columns are considered to be the minimal requirements of the Board and should not be interpreted to be restrictive in nature. The Board recognizes that the time required for the total educational process should be sufficient to provide adequate clinical experience for the development of sound surgical judgment and adequate technical skill. The requirements do not preclude additional desirable educational experience and Program Directors are encouraged to retain residents in a program as long as is required to achieve the necessary degree of competence.

The integration of basic sciences, particularly pathology, with clinical training is considered to be superior to formal courses in such subjects. Accordingly, while recognizing the value of formal courses in the study of surgery and the basic sciences at approved graduate schools of medicine, the Board will not accept such courses in lieu of any part of the required clinical years of surgical education.

The Board may at its discretion require that a member of the Board or a designated Diplomate observe and report upon the clinical performance of a candidate before establishing his admissibility to examinations or awarding his Certification.

The Board considers a residency in Surgery to be a full time endeavor and looks with disfavor upon any other arrangement.

All phases of the graduate educational process must be completed in a manner satisfactory to the Board.

2. Acceptable Programs

Those residency programs in Surgery in the United States which are reviewed and approved by the Resi-

dency Review Committee for Surgery and accredited by the Liaison Committee on Graduate Medical Education are acceptable to the Board as an adequate educational experience.

In Canada, those University residency programs in Surgery which bear accreditation by the Royal College of Physicians and Surgeons are an acceptable educational experience. Applicants from such programs must meet the Board's specific requirements for Group I candidates and cannot receive credit for training in countries other than the United States or Canada.

Except as mentioned above, participation in surgical training programs in countries other than the United States is not creditable toward the Board's educational requirements unless under the specific conditions set forth in the section "Credit for Foreign Graduate Education."

To provide flexibility and the opportunity for experimentation in surgical education, proposed programs at variance with the requirements outlined will be considered upon request by Program Directors to the Residency Review Committee for Surgery (535 North Dearborn Street, Chicago, Illinois 60610).

Lists of accredited programs may be found in the Directory of Residency Training Programs, published annually under the aegis of the Liaison Committee on Graduate Medical Education.

C. Specific Requirements

The specific time required to acquire the necessary knowledge, judgment and technical skill cannot be specified, but experience has demonstrated that a minimum four-year program will be adequate only in specific educational circumstances. In most instances five years of graduated training in a program acceptable to the Board following graduation from medical school will be required for candidates to reach the level of qualification satisfactory to the Board.

Satisfactory completion of four years of graduated responsibility in clinical surgery, which must include at least three years of "general surgery" in an accredited program post-medical school, is the minimum required of all candidates. The three years of "general surgery" must encompass surgery of the alimentary tract, of abdominal conditions, of the breast, of the head and neck, of the peripheral vascular system, of the endocrine system; and of trauma, including musculo-skeletal and head injuries.

The Board believes that optimal surgical education requires that the resident remain in the same program for at least the final two years of his training.

Candidates may under current policies complete Board requirements only under Group I:

1. GROUP I—Candidates who have satisfactorily completed an accredited four or more year program of graded residency in Surgery including a bona fide Senior/Chief Residency which must be the final clinical year of the program as accredited. The Board considers the terms Chief and Senior to be synonymous and to mean the final year of the program.
 - a. For candidates entering a program of graduate education in Surgery after June 30, 1971, a free-standing internship is not required, but the program must include a minimum of four years of *clinical* training after graduation from medical school. Three of the four years must be devoted to training in "general surgery," i.e., surgery of the alimentary tract, of abdominal conditions, of the breast, of the head and neck, of the peripheral vascular system, of the endocrine system; and of trauma, including musculoskeletal and head injuries. The remaining year may include training assignments in other surgical specialties and/or in allied disciplines such as anesthesiology, surgical pathology, internal medicine or pediatrics. No more than six months on allied disciplines and/or six months on any one surgical specialty

Surgery

other than "general surgery" will be credited toward the Board's requirements.

A program of five or more years may include assignments to research, basic sciences or other electives, but there must be at least four years of clinical training of which at least three years must be in "general surgery." In a five-year program the Board will accept no more than one year of training in any one surgical specialty other than "general surgery" and no more than six months of training in allied disciplines.

The final clinical year, regardless of the program duration, must be the Senior/Chief Residency year in "general surgery."

- b. For candidates who entered a program of graduate education in Surgery prior to July 1, 1971, having had a freestanding internship of at least one year's duration after graduating from medical school, the ensuing residency may include assignments to a research project, or to a basic science department such as pathology, physiology or anatomy, provided such assignment is an integral part of the accredited program and the program includes a minimum of three years of clinical general surgery. The final clinical year must be a Senior/Chief Residency year in "general surgery."
 - c. A candidate serving in a program designed for more than four years must complete the entire program unless the Program director requests that the Board consider his credentials earlier. In any case, he must complete the minimum requirements including a final clinical year as Senior/Chief Resident in "general surgery."
 - d. A Group I candidate serving in an "Integrated Program" may be assigned for any part of his residency at the discretion of the Program Director to any hospital or institution which is recognized as a component of that program by the Liaison Committee on Graduate Medical Education.
 - e. Rotations for not more than a total of one year during junior years may be made to hospitals accredited by the Liaison Committee on Graduate Medical Education as "Affiliates" of the parent program. If the total time to be spent outside the parent hospital is to exceed one year, special consideration must be requested from the Residency Review Committee for Surgery. The Senior/Chief Residency year must be accomplished in the parent institution except where special approval has been granted for a part thereof to be spent in a specified "Affiliate."
 - f. Rotations for not more than six months' total during junior years of the program may be made to hospitals in the United States which are not recognized "Affiliates" of the parent program.
 - g. Resident rotations to hospitals outside the United States not to exceed a total of twelve months during junior years may be approved by the Board provided the Program Director requests such approval in advance of the assignment of each resident. Such rotations require consideration by the Credentials Committee which normally meets in January and June of each year.
2. GROUP II—Those who, prior to July 1, 1972, satisfactorily completed a residency in general surgery, including the senior year, in a program approved by the Conference Committee on Graduate Education in Surgery as Type II (three years) are no longer admissible to the examinations of the Board. Previously published requirements stated that all such persons must have become certified prior to July 1, 1979 and will not be admissible to the Board's examinations after that date until they have complied with such requirements as the Board may promulgate in each case.

III. Operative Experience

Applicants for examination must have had an operative experience of such breadth and depth as may be deemed adequate by the Board. Each must submit a list of the operative procedures performed, and those in which he has been first assistant or teaching assistant, during the entire period of training. The list must be submitted on a form supplied by the Board or on the *Resident's Record* form of the Residency Review Committee for Surgery.

In tabulating cases for credit toward Board requirements a resident may claim a case "As Surgeon" when he has actively participated in the patient's care so that he has made or confirmed the diagnosis; participated in selection of the appropriate operative procedure; has either performed or has been responsibly involved in performing the critical portions of the operative procedure; been a responsible participant in both pre- and post-operative care and in so far as possible seen the patient in follow-up visits. All this must be accomplished under the supervision of the responsible member of the Senior Staff.

Failure to submit a complete and properly authenticated list of operative procedures will constitute incomplete credentials and will result in deferral of admission or examination.

Applicants are advised to keep a copy of the lists of operative work they submit, for their records, as the Board cannot furnish copies.

Credit for Military Service

Credit will not be granted toward the minimum requirements of the Board for service in the Armed Forces, the Public Health Service, the National Institutes of Health or other governmental agencies to persons entering such services after June 30, 1974, unless the service was as duly appointed resident in an accredited program in Surgery. Credit for those who had satisfactory surgical assignments in the various governmental agencies prior to June 30, 1974 is not automatic, but not more than twelve months may be granted by the Board provided the Director of the Program in which the candidate is serving so recommends and the resident completes his training in that program. Credit granted is not transferable to another program unless the new Program Director so recommends to the Board. Special requests from Program Directors will be considered by the Credentials Committee.

Credit for Foreign Graduate Education

Acceptance for examination and certification by the American Board of Surgery is based upon satisfactory completion of the stated requirements in accredited residency programs in surgery in the United States. Regardless of an individual's professional attainments here or abroad, no credit will be granted directly to a candidate for surgical education in a foreign country. The Board will consider granting partial credit only upon the request of the Director of an accredited program who has observed the candidate as a junior resident for nine to twelve months and wishes to advance the candidate to a higher level in that program. The credit granted will not be valid until the candidate has successfully completed that program. If the candidate moves to another program the credit is not transferable and must again be requested by the new Program Director. Only under exceptional conditions will the Board consider granting more than one year of residency credit at a junior level for foreign training.

Rules Governing Admissibility to the Certifying Examinations

A. A Candidate is admissible to the Certifying Examinations only when he has satisfactorily fulfilled all the educational requirements of the Board *currently in force at the time of receipt of his formal Application for Examination by the Board*, and/or such other requirements as the Board may specify in special cases; all his credentials, including his operative experience and the endorsement by the Program Director and Faculty, have been reviewed and deemed acceptable; his Application has been approved; and he has successfully

completed the Qualifying Examination. He then becomes an "Active Candidate for Certification" and will be so notified and will be scheduled for appearance at the appropriate Certifying Examination.

B. The Qualifying Examination will be offered, annually for ten (10) years, if necessary, to those whose Applications have been approved. Examinees will be assigned to a specified center designated by the Board based upon the last recorded address of the Applicant. No personal preferences will be honored and assignments by the Board are final. Those who have not completed the Qualifying Examination within ten (10) years will no longer be considered Applicants. They will be required to undertake such additional remedial education in Surgery as may be directed by the Board, submit their credentials to the Board for review, submit a new formal Application and all appropriate fees. If approved they become "New Applicants."

C. The Certifying Examination will be offered to those who have passed the Qualifying Examination and have become "Candidates for Certification" at the earliest practicable time consistent with the Board's geographical examination policy. Candidates will be assigned to centers as designated by the Board; no personal preferences will be honored and center assignments are final. Candidates will be offered three (3) and only three opportunities to appear for examination during the five academic years following completion of the Qualifying Examination. An opportunity offered which is missed or not taken will be counted as one of the three available. If a candidate fails the examination three times, or fails to accept the opportunities offered he will be required to complete satisfactorily at least one year of residency in general surgery at an advanced level in an accredited program and be recommended by the Program Director and Faculty before again being considered by the Board for admission to the Certifying Examination. A candidate who is admitted to the Certifying Examination for the fourth time and again fails must complete a minimum of three years of residency in general surgery, including a Senior/Chief Residency, in an accredited program and will then be treated as a "New Applicant." A "New Applicant" is required to submit a new Application and supporting documents, pay all fees and successfully complete the Certifying Examination before advancing to the status of "Active Candidate for Certification."

D. Applicants who, ten (10) academic years after original approval, have not become Certified or who are not actively pursuing the completion of the stated requirements applicable in each case, shall have their files disposed of and no longer have status with the Board. If they wish later to be considered, they must fulfill the requirements specified in each case and at that time by the Board.

E. The Board on the basis of its judgment may waive the above rules in whole or in part and grant or deny an "Applicant" or "Candidate for Certification" the privilege of examination whenever the facts in the case are deemed by the Board to so warrant.

The Board, does not use or sanction the terms "Board Eligible" or "Board Qualified." The standing of an individual with the Board varies according to the current status of his credentials.

The Examinations Offered by the Board

The Board offers a *Qualifying Examination* and a *Certifying Examination for General Certification in Surgery*, an *Examination for Certification of Special Qualifications in Pediatric Surgery*, and an *In-Training Examination*. The examinations leading to Certification are offered to individuals, but the In-Training Examination is offered to Program Directors for their use as an educational tool, for the assessment of the individual resident's grasp of surgical fundamentals.

The Board notifies each candidate for General and Special Certification of his performance on examinations. Beginning with candidates whose formal Applications were approved in 1975, the Board may report their performance on any or all of

the Board's examinations to the Director of the Program in which the candidate completed his final year of residency. All reports pertaining to the In-Training Examination are provided to the Program Director.

All examinations are composed annually by members of the American Board of Surgery.

Assignment to Examination

The Board will determine the specific examination and center to which examinees are to be assigned. There will be no option as to time, date or place available to examinees. The Board's assignment is final and if not accepted will be counted as an opportunity.

I. EXAMINATIONS FOR GENERAL CERTIFICATION IN SURGERY

A. THE QUALIFYING EXAMINATION

This examination is written and is offered once a year, usually late November or early December. It is given simultaneously in a number of locations in the United States and at selected locations abroad.

Applicants whose applications have been approved by the Board are sent annually, throughout their period of admissibility, and announcement of the examination. With the announcement is a reply card which must be returned to the Board if the applicant wishes to be scheduled for this examination. Shortly before the date of examination he is sent an *Admission Card* indicating the specific location of the examination center, and reporting times, and a pamphlet describing the examination and the types of questions to be expected.

The examination itself consists of questions of the objective multiple-choice type designed to cover general surgical principles and the sciences basic to surgery. In addition, there are programmed-type questions designed to measure the ability to manage patients by offering the opportunity to order and interpret various diagnostic studies and procedures, to prescribe appropriate therapy or operative intervention, and to make other pertinent decisions related to the care of surgical patients.

Successful completion of the Qualifying Examination is a requirement for all, to attain the status of "Active Candidate for Certification" and admission to the Certifying Examination.

B. CERTIFYING EXAMINATIONS

Examinations are held periodically, usually six or seven times a year, in major cities within the continental United States. Candidates for Certification will receive an announcement of the examination to which they may be assigned approximately two months prior to the examination session, with a reply card which must be returned at once if a candidate wishes to be included in that examination. Failure to return or late return of the card will result in that examination being counted as one of the three opportunities to be offered. Since announcements are sent to a few more candidates than can be examined at a particular session, if the Board cannot accommodate a candidate at that particular examination it will not be counted as an opportunity and he will be offered another. A candidate firmly assigned to an examination will be sent an *Admission Card* indicating the specific time and place to report for examination.

The Board will normally assign candidates to the examination center serving the geographical area in which the candidate was last known to reside. Personal preferences for assignments to other centers or dates will not be honored.

The examinations are conducted by members of the American Board of Surgery and certain selected associate examiners who are Diplomates of the Board and usually from the local geographic area.

The examinations consist of three oral sessions conducted by teams of two examiners each, directed toward determining the candidate's understanding of clinical entities, his level of surgical judgment, and his problem solving ability. In addition there is one examination session directed at testing the candidate's interpretive skills by presenting a number of cases using projected transparencies. During all sessions, the ability to apply knowledge of anatomy, physiology, pathology,

Surgery

biochemistry, and bacteriology to clinical problems is also evaluated.

The examination occupies one full day and since it ordinarily starts at approximately 7:45 a.m. it is well for those who live at some distance to arrange to stay in the city of the examination the night before.

II. EXAMINATIONS FOR SPECIAL CERTIFICATION

The Board offers examinations for *Certification of Special Qualifications in Pediatric Surgery*. Please see the section on "Special Certification in Pediatric Surgery."

III. IN-TRAINING EXAMINATION

The Board offers annually to Program Directors of accredited residency programs in Surgery, a written *In-Training Examination* which is designed to test the general level of knowledge which has been attained by residents regarding the fundamentals and the basic sciences related to Surgery. The test is aimed at the level of the second-year resident, but at the Program Director's discretion, may be administered to any one. It is also designed to meet the first milestone which is required by the "Essentials" for residencies in general surgery.

The Board will normally furnish pertinent information to the Directors of all accredited programs in Surgery several months in advance of each year's examination and ascertain the number of test booklets desired.

The examination will be administered by each participating Program Director in the Spring each year and reports should be in their hands in mid-June.

Program Directors should take note of the fact that the Board does not contact each institution in which residents are located, but depends upon the Director of the Program to order an adequate number of test booklets for residents in his total program which includes not only his own institution but also all those indented under his program designation in the Directory of Residency Training Programs.

It is important to note that the In-Training Examination is not offered to individuals, but to Program Directors only.

The In-Training Examination is not required by the Board as part of the certification process.

Application for Examination for General Certification in Surgery

A prospective candidate for examination by the Board should carefully read the requirements set forth in its Booklet. If he needs advice about his plans for graduate education in surgery, or believes that he has met or is within six months of meeting the requirements, he should write the Board and request an *Evaluation Form*. This form should be completed precisely and returned to the Board. The candidate will then be advised as to whether or not it appears that he has met or will meet the requirements, or what will be necessary. Candidates are advised not to submit documents, testimonials, letters of recommendation, case reports or other information unless requested by the Board.

Candidates must, in any case, communicate with the Board at least four months before completion of their educational requirements and in no instance later than June 1st if they wish to receive the formal *Application for Examination* and be considered for the Qualifying Examination to be given in that year. The *Application for Examination* form will not be sent to candidates until they are within several months of completing the educational requirements and appear to have met all other requirements.

The *Application for Examination* form must be completed and returned to the Board no later than August 1st or the candidate will not be considered for the Qualifying Examination to be given in that year.

Candidates who complete the educational requirements after September 30th will not be considered for admission to the Qualifying Examination in that year, but must wait until the following year.

The acceptability of a candidate does not depend solely upon the completion of an approved program of education, but also upon information available to the Board regarding his

professional maturity, surgical judgment, technical competence and ethical standing.

A candidate who has submitted an *Application for Examination* form will be notified as to his admissibility to examination.

Fees (General Certification)

Registration—payable with	
<i>Application Form</i>	U.S. \$100.00
Qualifying Examination	U.S. \$200.00
Certifying Examination	U.S. \$200.00
(Both these examination fees payable upon assignment to a center.)	

Fees for a re-examination are the same as shown above, for each Examination.

Each fee for examination or re-examination includes a U.S. \$50.00 processing charge which is not refunded if the candidate withdraws after he has been assigned to an examination center.

A candidate who withdraws must notify the Board Office more than 3 business days before the examination for which he is scheduled. (For Certifying Examination this means more than 3 business days before the start of the three-day period of examining at the center, regardless of which day he is scheduled.) A candidate who fails to appear for examination or who withdraws without giving more than three days' notice as defined above, may forfeit the *entire fee* for examination.

Fees are subject to change as directed by the Board.

The Board is a non-profit organization. All fees will be used, after a reasonable amount is set aside for necessary expenses, to aid in improving existing opportunities for the education of surgeons. The members of the Board, except the Secretary-Treasurer, serve without remuneration.

Special Certification in Pediatric Surgery

The American Board of Surgery with the approval of the American Board of Medical Specialties offers *Certification of Special Qualifications in Pediatric Surgery*. By definition, the Special Certification is to be offered to those whose training and activities encompass the scope of pediatric surgery as delineated for general surgery in the paragraph "Specialty of Surgery ('General Surgery') Defined," above. It has been agreed with other recognized specialty Boards that this Special Certification will not be offered to those who, for practical purposes, limit their activities to the spheres of interest of other Boards, such as Orthopaedic, Urologic, Plastic and Thoracic Surgery.

I. ACCEPTABLE PROGRAMS

Residency Programs in Pediatric Surgery in the United States accredited by the Liaison Committee on Graduate Medical Education are acceptable as are those in Canada accredited by the Royal College of Physicians and Surgeons.

II. SPECIFIC REQUIREMENTS

- A candidate must have demonstrated special qualifications in pediatric surgery, have an ethical standing in the profession and a moral status in the community which are satisfactory to the Board.
- A candidate must be a Diplomate of the American Board of Surgery and hold an unrestricted license to practice in the United States or Canada.
- A candidate must have satisfactorily completed at least two years of residency in pediatric surgery, the final year being as Chief Resident. Training begun after June 30, 1981 will be acceptable only if received in a program approved by the Residency Review Committee for Surgery and accredited by the Liaison Committee on Graduate Medical Education. The residency in pediatric surgery must be in addition to the basic educational requirements for Certification in Surgery.
- A candidate must receive the unqualified endorsement of the Director of the Program(s) in which he received his pediatric surgical education.
- A candidate must be actively and primarily engaged in the practice of pediatric surgery.

F. A candidate must submit an authenticated list of his operative experience as surgeon and as assistant for review by the Board. While no limits have been fixed, a candidate's operative experience over a given period of time must be adjudged adequate by the Board.

III. EXAMINATION FOR SPECIAL CERTIFICATION IN PEDIATRIC SURGERY

The examinations are developed and administered by the Committee for Pediatric Surgery of the American Board of Surgery and certain selected Diplomates acting as associate examiners. The examination, written and oral, is administered at a single center for all candidates, usually in the Spring, and ordinarily occupies two days.

The Examination in Pediatric Surgery is held *every other year*, in the even number years.

IV. APPLICATION FOR EXAMINATION

Candidates desiring admission to examination should communicate with the Board immediately following completion of their pediatric surgery residency, requesting pertinent information and a *Preliminary Evaluation Form*. Those who appear to have met all the educational requirements will then be sent an *Application for Examination* form. The *Application* must be fully and precisely completed and returned to the Board office *no later than October 15th* in order to be considered for examination the following Spring. The *Pediatric Surgery Operative Experience Report* must also be in the Board's hands by October 15th.

No candidate will be admitted to the examination until he has met the specified requirements, his credentials have been reviewed and his *Application* has been approved by the Board.

V. RULES GOVERNING ADMISSIBILITY TO EXAMINATION

A. GENERAL RULES—A candidate is admissible to the examinations only when he has successfully fulfilled the requirements *currently in force at the time of receipt of his formal Application for Examination by the Board* and/or such other requirements as the Board may specify in special cases; all his credentials, including the unqualified endorsement of the Pediatric Surgery Program Director under whom training was completed, and his operative experience, have been considered and deemed acceptable; and his formal *Application* has been approved. Each candidate will be admissible to the next three examinations after approval of his *Application*. If he does not become Certified within this period he will no longer be a Candidate for this Special Certification and will be required to undertake such additional educational experience in pediatric surgery as the Board may direct before again being considered for admission to examination.

B. RE-EXAMINATION RULES—A candidate may be examined for a second or third time at the next two opportunities following his initial examination. If he has not successfully completed the examination within this period, he loses his status as an "Active Candidate." He is then required to complete satisfactorily at least one year of residency in an accredited program in pediatric surgery or full time Fellowship in pediatric surgery, the location and detailed plan for which have been approved in advance by the Board, before he will again be considered for readmission to examination. A candidate who is then accepted for a fourth examination and is unsuccessful will be required to complete two additional years, including a Senior/Chief Residency year, in an accredited program in pediatric surgery, and will be treated as a "New Applicant."

The Board, on the basis of its judgment, may deny or grant a candidate the privilege of further re-examination whenever the facts in the case are deemed by the Board to so warrant.

VI. FEES (PEDIATRIC SURGERY)

U.S. \$100.00 Registration—payable with *Application* form.

U.S. \$250.00 Examination or Re-examination—payable upon assignment.

Each fee for examination or re-examination includes a U.S. \$50.00 processing charge which is not refunded if the candidate withdraws after he has been assigned to an examination center. A candidate who withdraws must notify the Board Office *more than 3 business days* before the examination for which he is scheduled. A candidate who fails to appear for examination or who withdraws without giving more than three days' notice as defined above, may forfeit the *entire fee* for examination.

Certification

I. GENERAL CERTIFICATION

A candidate who has met all the requirements and has successfully completed the examinations of the American Board of Surgery will be issued a Certificate by the Board, signed by its Officers, attesting to his qualifications in *Surgery*.

II. SPECIAL CERTIFICATION IN PEDIATRIC SURGERY

A candidate who has met all the requirements and has successfully completed the examination in pediatric surgery will be issued a certificate by the American Board of Surgery, signed by its Officers, attesting to his *Special Qualifications in Pediatric Surgery*.

III. RECERTIFICATION

A. GENERAL CERTIFICATION IN SURGERY

The American Board of Surgery intends to offer Recertification to its Diplomates. All those receiving General Certification in Surgery after December 31, 1975 are issued Certificates which bear a limiting date of ten years, after which they are no longer valid. Those desiring to renew their certified status must fulfill the requirements for Recertification specified by the Board at that time.

For those Certified prior to December 31, 1975, the Board will offer the opportunity to become Recertified beginning in 1980, if they so desire. Certificates issued before December 31, 1975 do not have a time limited validity.

The REQUIREMENTS to be met by those seeking *Recertification* are:

1. Have been previously issued and hold a Certificate issued by the American Board of Surgery.

2. Have been Certified seven or more years at the time of application for recertification.

3. Hold a valid license to practice medicine and/or surgery.

4. Currently hold privileges to practice surgery in a hospital(s) accredited by the Joint Commission on Accreditation of Hospitals, or such other hospitals as may be judged acceptable by the Board.

5. Be currently engaged in the practice and/or teaching of surgery.

6. Receive a satisfactory evaluation as to his surgical qualifications by the current Chiefs of Surgery in those hospitals in which practice privileges are exercised, or by the President or Chief of Medical Staff or similar official.

7. Be in good standing in the profession as evidenced by membership in the local medical/surgical society, fellowship in the American College of Surgeons or other regional or national surgical associations. This requirement is not applicable to Diplomates residing and practicing abroad. If not a member of any association it shall be of the applicant's own choice.

8. Participation during the three years preceding Application, in at least 120 hours of continuing education in surgery. At least 60 hours must have been earned in Category I activities bearing accreditation by the Liaison Committee on Continuing Education and the other 60 hours may be accrued through Category 3 and 5 activities as designated currently by the Council on Medical Education of the American Medical Association. The Surgical Education and Self-Assessment Program (SESAP) of the American College of

Thoracic Surgery

Surgeons offers an attractive method for obtaining Continuing Medical Education credits for Recertification.

9. Submit for the Board's consideration a practice profile in the form of an Operative Experience Report covering the two calendar years prior to Application. The Report must be authenticated by an official (other than the applicant) of the hospital in which the operations were performed.

10. Approval of the above credentials by the Board and authorization for admission to the Examination for Recertification. If the individual's credentials are not approved he will be so notified and will have the opportunity to appeal to the Credentials Committee of the Board.

11. Attainment of a score on the Examination for Recertification which has been determined by the Board to demonstrate acceptable knowledge of the specialty of Surgery.

The American Board of Surgery will offer an Examination for Recertification beginning in the academic year starting July 1, 1980. The examination will be offered annually or at other appropriate intervals and at such centers and times as may be decided by the Board. The examination will be written, clinical in nature and devoted to the components of the Specialty of Surgery as defined earlier in these columns. The examination will be constructed and administered by the Board.

The American Board of Surgery and the American College of Surgeons have agreed that while surgical education and the certification process are directly interconnected they need not be carried out by the same body. It was further agreed that the American College of Surgeons would continue as in the past to provide the opportunities for continuing education for the surgeon through its Congresses, post graduate courses, Surgical Education and Self-Assessment Programs and other activities and that the Board would not produce nor provide educational materials nor opportunities, but would continue to be the body concerned with testing and Certification of the specialist in Surgery.

It was further agreed that the Board would recommend, but not require, participation in the SESAP of the College and would base the greater part of any examination for Recertification upon the material contained in SESAP and other educational activities of the College, but would not utilize the actual SESAP questions as such.

In addition, all of the sponsoring surgical organizations of the American Board of Surgery have input into the Recertification process by virtue of their representatives who serve on the Board as Directors.

The Recertification procedure involves submission of an Application by those seeking Recertification. The Application will be accompanied by the necessary documentation to indicate that the applicant meets the requirements. Those who meet all the requirements will be admitted to examination. However, in cases in which requirements have not clearly been met, the Credentials Committee will thoroughly review the data submitted and make recommendations to the Board of Directors as to further action. Those who pass the examination will be Recertified. Applicants who fail the examination may take it four more times in consecutive years. If the applicant has not become Recertified within the five years it will be necessary to again establish credentials with the Board and meet the requirements listed in Items (3) through (11) above, before again being admitted.

Those desiring to seek Recertification are encouraged to communicate with the Board for further information regarding the process.

B. SPECIAL CERTIFICATION IN PEDIATRIC SURGERY

All Certificates of Special Qualifications in Pediatric Surgery will bear dates limiting their validity to ten years, after which they are no longer valid. Those desiring to renew their Certified status must fulfill the requirements for Recertification specified by the Board at that time.

Revocation of Certificate

Any Certificate issued by the Board shall be subject to revocation at any time in the case the Board shall determine, in its sole judgment, that a candidate who has received a Certificate was in some respect not properly qualified to receive it.

AMERICAN BOARD OF THORACIC SURGERY

Robert G. Ellison, Chairman, Augusta, Georgia
 Benson B. Roe, Vice Chairman, San Francisco, California
 Herbert Sloan, Secretary-Treasurer, Ann Arbor, Michigan
 Philip E. Bernatz, Rochester, Minnesota
 Richard J. Cleveland, Boston, Massachusetts
 Hermes C. Grillo, Boston, Massachusetts
 Charles R. Hatcher, Jr., Atlanta, Georgia
 John W. Kirklin, Birmingham, Alabama
 Harold V. Liddle, Salt Lake City, Utah
 Donald G. Mulder, Los Angeles, California
 Hassan Najafi, Chicago, Illinois
 Frank C. Spencer, New York City
 Quentin R. Stiles, Los Angeles, California
 Harold C. Urschel, Jr., Dallas, Texas
 Watts R. Webb, New Orleans, Louisiana
 Miss Louise Sper, Executive Assistant,
 14640 East Seven Mile Road, Detroit, Michigan 48205

Requirements for Certification

1. Certification by the American Board of Surgery.
2. Adequate training in thoracic and cardiovascular surgery (as defined below).
3. Satisfactory performance on the American Board of Thoracic Surgery examination.

Definition of Adequate Training

Every candidate for certification must complete a minimum of 24 months of identifiable training in thoracic and cardiovascular surgery. This must include 12 months of senior responsibility which should be continuous. The Director of the Thoracic Training Program is required to sign the application form stating that the candidate has satisfactorily completed training in thoracic surgery, of which the last 12 months were of senior responsibility.

Candidates who have satisfactorily completed a minimum of two years of training in thoracic surgery and are recommended by their program director are eligible for examination subject to the following conditions:

1. Candidates in non-approved programs who began training before July 1, 1976, may be accepted for examination after review of their experience by the Credentials Committee. They must meet the same criteria as candidates from approved programs.
2. Candidates for certification who began their training in thoracic and cardiovascular surgery on or after July 1, 1976, will be accepted for examination only if they have completed two years of training in a program approved by the Residency Review Committee for Thoracic Surgery or in a program approved for full training by the Royal College of Surgeons of Canada.
3. The applications of candidates who started their training on or after January 1, 1972, and whose independent operative experience falls below the thirtieth percentile of the entire candidate group will be referred to the Credentials Committee for review. The thirtieth percentile figure of the 1979 candidate group was 180 major operations for credit.

4. The applications of candidates who started their training on or after July 1, 1974, and whose independent operative experience is concentrated in one area, or is inadequate in an area, will be referred to the Credentials Committee of the Board for review.

The Credentials Committee has been authorized by the Board to reject candidates from approved programs if their training is considered to be inadequate. The candidate, the program director, and the Residency Review Committee for Thoracic Surgery will be notified if such actions are taken by the Credentials Committee.

As a guideline for the operative experience for which credit will be allowed, the Credentials Committee considers that a candidate should perform an average of one or two major thoracic procedures a week during his two years of residency. Among these cases an adequate distribution in key areas is necessary to insure a reasonably balanced experience. While these figures are changed periodically to reflect changes in the patient population, currently the following *minimal* experience is recommended:

	<i>Procedures</i>
Lungs, pleura, chest wall	25
Esophagus, mediastinum, diaphragm	10
Congenital heart	20
Acquired heart	20
Myocardial revascularization	25

The majority of the cardiac procedures should involve the use of cardiopulmonary bypass. In addition to major operative experience, the candidate should have implanted at least 15 cardiac pacemakers and performed at least 25 endoscopic procedures. It is emphasized that the actual numbers of operations in each category should not be taken too literally, but merely used as a guide in acquiring what is considered acceptable training. Major vascular operations outside the thorax will be counted for credit toward Board requirements if they are itemized in the summary of operative experience.

Even though emphasis on one or another facet of thoracic surgery (pulmonary, cardiovascular, esophageal, thoracic trauma, etc.) may have characterized the candidate's training experience, a candidate is nevertheless held accountable for knowledge concerning all phases of the field.

Credit will be allowed for operative experience only when the following criteria are met:

- a. The resident participated in the diagnosis, pre-operative planning and selection of patient for operation or surgical indication;
- b. The resident performed those technical manipulations that constituted essential parts of the procedure itself;
- c. The resident was substantially involved in post-operative care.

Credit will be allowed whether there is direct or indirect supervision by the responsible staff or faculty.

The Board wishes to emphasize, in addition, that first-assessing at operations is considered an important part of resident training.

Credit for Foreign Graduate Education

Foreign candidates may be considered for examination by the Credentials Committee regardless of when the training occurred when the following conditions have been met:

1. The candidate has obtained certification by the American Board of Surgery.
2. The candidate has been allowed no more than one year's credit by the Credentials Committee for training outside the United States and Canada.
3. The candidate has obtained one year of thoracic residency training at the senior level in an approved United States or Canadian program.

Applications

Prospective candidates desiring to apply for examination should consider whether they are able to meet the minimum requirements of the Board. They should then submit a letter to the office of the secretary of the Board, outlining briefly their training and experience in thoracic surgery.

An application blank will be sent to those candidates who have completed residency training programs which have been approved by the Residency Review Committee for Thoracic Surgery. Candidates who have completed their training in other than approved programs will be sent an Evaluation Form, which, when completed and returned, will be considered by the Credentials Committee of the Board. If the candidate's training is acceptable, an application blank will be sent.

Candidates are notified of their eligibility for examination when their applications have been approved. Candidates

who do not exercise the examination privilege within three years of the date they are declared eligible will be required to file a new application, have their eligibility for examination reviewed by the Credentials Committee, and pay a new examination fee.

Candidates who apply for examination more than five years after the satisfactory completion of their residency must have an additional year of training in an approved program before they will be eligible to apply for examination. This ruling applies to candidates finishing their training in thoracic and cardiovascular surgery after January 1, 1975.

Candidates applying for admission to the 1981 certifying examination, and thereafter, must fulfill all the requirements of the Board in force at the time their applications are received.

Examinations

It is the policy of the American Board of Thoracic Surgery to examine candidates only upon completion of their thoracic surgery residency.

Separate written and oral examinations are each held annually at times and places determined by the Board. Information regarding the dates and places of the examination is published in the Examination and Licensure column of the Journal of the American Medical Association, the Journal of Thoracic and Cardiovascular Surgery, and the Annals of Thoracic Surgery.

Part I—Written Examination

The examination consists of an objective multiple choice written examination designed primarily to assess cognitive skills. Candidates unfamiliar with objective, multiple choice, machine scorable type of examination might find helpful the book, "Measuring Medical Education: The Tests and the Experience of the National Board of Medical Examiners" by J. P. Hubbard, M.D., Lee and Febiger, Philadelphia, 1978

Part II—Oral Examination

Successful completion of the Part I (written) examination will be a requirement for admission to the Part II (oral) examination. The oral examination must be taken within three years after notice has been sent to the candidate that he/she has passed the written examination, or the candidate will be required to submit a new application for approval by the Board and pay an additional fee. The oral examination is designed to test the candidate's knowledge, judgment, and ability to correlate information in the management of clinical problems in thoracic and cardiovascular surgery.

Re-examinations

Candidates who fail an examination (Part I or Part II) are eligible to repeat the examination the following year.

Candidates who fail an examination (Part I or Part II) three times must complete an additional year of training, preferably in a program approved by the Residency Review Committee for Thoracic Surgery, before they will be considered for examination a fourth time. If training in an approved program cannot be obtained, training may take place in an unapproved program if the training has been reviewed and approved in advance by the Credentials Committee.

Candidates who are eligible for re-examination and who do not exercise the re-examination privilege within three years of the date they failed will be required to file a new application blank, have their eligibility for examination reviewed by the Credentials Committee, and pay a new examination fee.

Fees

Registration fee	\$100.00
Part I examination fee	\$400.00
Part I re-examination fee	\$400.00
Part II examination fee	\$250.00
Part II re-examination fee	\$250.00

Candidates who do not appear for the examination (Part I or Part II) or who cancel less than six weeks before either examination will forfeit their examination fee.

Urology

The Board is a non-profit corporation, and the fees from candidates are used solely for defraying actual expenses incurred in office administration and conducting examinations. The directors of the Board serve without compensation.

Certification

After a candidate has met the requirements for eligibility and passed the examination, a certificate attesting to his qualifications in thoracic surgery will be issued by the Board.

Recertification

Applicants who are certified in thoracic surgery after December 31, 1975, will be issued certificates valid for ten years from the date of certification, after which the certificates will no longer be valid. Certificates can be renewed prior to expiration by fulfilling the requirements for recertification specified by the American Board of Thoracic Surgery at that time.

Revocation of Certificate

No certificate shall be issued and any certificate may be revoked by the Board if it shall determine that:

(a) the candidate for certification did not possess the required qualifications and requirements for examination whether or not such deficiency was known to the Board or any Committee thereof prior to examination or at the time of the issuance of the certificate as the case may be,

(b) the candidate for certification or certified physician made a material misstatement or withheld information in his application or any other representation to the Board or any Committee thereof, whether intentional or unintentional,

(c) the candidate for certification or certified physician was convicted by a court of competent jurisdiction of any felony or misdemeanor involving moral turpitude and, in the opinion of the Board, having a material relationship to the practice of medicine, or

(d) the candidate for certification or certified physician had his license to practice medicine revoked or was disciplined or censured by any court or other body having proper jurisdiction and authority because of any act or omission arising from the practice of medicine.

AMERICAN BOARD OF UROLOGY

Willard E. Goodwin, President, Los Angeles
 C. Eugene Carlton, Jr., Vice President, Houston, Texas
 David C. Utz, Secretary-Treasurer, Rochester, Minnesota
 Alan D. Perlmutter, Chairman, Examination Committee,
 Detroit
 Joseph B. Dowd, Boston
 James F. Glenn, Durham, North Carolina
 John T. Grayhack, Chicago
 Frank Hinman, Jr., San Francisco
 Clarence V. Hodges, Portland, Oregon
 James H. McDonald, Phoenix, Arizona
 William J. Staubit, Buffalo, New York
 Ralph A. Straffon, Cleveland, Ohio
 J. Tate Mason, Executive Secretary,
 Harborview Medical Center, 325—9th Avenue,
 Seattle, Washington 98104

Requirements for all Applicants

All applicants for examination and potential certification by the American Board of Urology shall meet certain basic requirements:

A. APPLICATION

1. A special application form, provided by the Secretary shall be completed by the applicant and returned to the Board with other required documents.

2. A portion of the examination fee shall be paid at the time the application is submitted, as specified in section B, FEES.

3. Application must reach the American Board of Urology by December 1 in order to permit the applicant to be seated for the written or qualifying examination in the May following.

4. Senior residents applying for Part I, the written or qualifying examination, will omit 5, 6, 9, 10 and 11 on the applica-

tion form, this additional information to be provided in a supplemental form after a reasonable period of post-residency practice.

5. Applications from senior residents must be supported by a letter from the Program Director, confirming that the applicant will have completed at least six months of senior residency by June 1 of the year in which the written or qualifying examination is taken and recommending the applicant for Part I.

6. Applications for examination will be examined by the Credentials Committee, reviewed by the Board, and additional data if required will be requested by the Secretary.

7. Applications will be suspended if two successive examination appointments are cancelled by the applicant. (See section B, FEES).

8. A new application will be required of an applicant who fails to take the examination within five years of the date of original application.

9. An applicant or candidate who fails any portion of the examination on three occasions must file a complete new application to be approved by the Board, and full fees will be required.

B. FEES

The examination fee is \$800.00, but may from time to time be altered as deemed necessary in the judgment of the Board. No fees are returnable or refundable.

Four hundred dollars shall be paid and should accompany the initial application, except in the case of senior residents who shall pay \$300.00 at the time of initial application to take Part I, the written or qualifying examination. In all cases, the balance of the examination fee shall be paid by the candidate on notification of successful completion of the qualifying examination and eligibility to take the certifying examination, Part II.

Applicants or candidates failing one or more parts of the examination will be permitted to take repeat examinations after one year or within three years, and a fee of \$100.00 will be charged for each re-examination.

Applications suspended by reason of cancellation by the applicant on two successive occasions will require payment of a reinstatement fee of \$100.00 to be returned to active status.

Applicants or candidates failing any portion of the examination on three occasions will be required to file a new application with payment of fees as specified at the time of reapplication.

Applicants failing to take Part I, the written or qualifying examination within five years of date of original application will be required to file a new application with payment of fees as specified at that time.

Candidates failing to take Part II, the certifying examination, within five years of notification of eligibility to take that examination will be required to file a new application with payment of fees in full as specified at that date.

C. EDUCATION PREREQUISITES

1. Applicants must submit documentations of graduation from a medical school approved and recognized by the Liaison Committee on Medical Education, or from a medical school deemed by the Board to have provided equal or superior medical educational opportunities and experience.

2. Applicants must submit evidence of at least two years or preliminary graduate residency training, preferably in surgery, in approved graduate training programs.

3. Applicants must satisfactorily complete a urologic residency of at least three years duration in an approved program, including a final year as senior resident.

4. Training in a formally integrated urologic residency program embracing variations in preliminary and urologic training may be permitted by the Board at its discretion, provided the basic minimum intervals of training are observed.

5. Applicants are urged by the Board to seek more than minimal training opportunities, and additional experience in both surgical and urologic residency programs will be encouraged.

6. Applications which do not reflect the applicant to have met these basic requirements will be judged on individual merit, and the Board may in its own discretion permit some variation from these requirements when a suitable and satisfactory documentation of equivalent or superior education and training is provided.

D. LICENSURE AND PRACTICE

1. Applicants for Part I, the written or qualifying examination, may be practicing urologists or senior residents as specified in section on APPLICATION, A.

2. Candidates for Part II, the certifying examination, having met all other requirements and passed the Part I examination, must document not less than eighteen months in the practice of urology in a community, academic appointment, or military service.

3. Applicants must assure the Board of full time engagement in the practice of urology.

4. Applicants must be duly licensed by law for the practice of medicine and must establish this in a manner satisfactory to the Board.

5. Applicants must be of high ethical, moral and professional standing, and this must be established to the satisfaction of the Board.

Requirements for Certification

The requirements for certification include:

A. EVIDENCE OF HOSPITAL PRACTICE

1. The candidate must bring to the Board, at the time of reporting for oral examination, a list of all major and minor hospital cases, during the eighteen months immediately preceding January 1 just prior to taking the oral examination. These lists must be prepared in accordance with the form provided by the American Board of Urology and must be verified by the hospital administrators of all hospitals where procedures were performed.

2. Photostatic copies of one or more of the full hospital records of any of the above may likely be requested. The candidate is expected to furnish this within one month of the request.

B. EXAMINATIONS

1. Part I—Qualifying Examination

This examination will be given in June of each year, simultaneously at various locations convenient for applicants. Anyone who has completed his residency or senior residents in training whose applications have been approved may take this part of the examination. The written examination is designed to demonstrate the candidate's knowledge of the entire field of urology and allied subjects.

Following is a concise outline of the areas covered:

Anatomy — The gross anatomy, relations, blood and nerve supply, and lymphatic drain of all of the organs involved in urology including the adrenal.

Physiology — Physiology of the pituitary, as related to urology, adrenal gland, kidney, organs of urinary transport, prostate, seminal vesicles, testis, epididymis, and penis are covered.

Embryology, Growth and Development, Physiology of the Genitourinary System Peculiar to the Infant and Child — This area covers pediatric endocrinology, sex differentiation, and all of the endocrine and ambiguous sex problems. All physiology related to the genitourinary system in the infant and child are covered.

Neoplasms — All benign and malignant neoplasms including adrenal, plus all organs of the genitourinary system. Diagnosis, surgical treatment, nonsurgical treatment and prognosis are covered.

Calculous Disease — All aspects of calculous disease including etiology, diagnosis techniques, and all forms of medical and surgical treatment are covered.

Obstructive Uropathy and Urinary Diversions — The pathophysiology of obstruction, causes and diagnosis of obstruction, treatment of acquired obstructive lesions,

and urinary diversions of all types are covered.

Trauma and Fistula — of all of the organs involved in urology are covered (Etiology, diagnosis, and treatment).

Neurogenic Bladder and Incontinence, Priapism and Impotency, Endocrinology Related to Urology and Infertility are covered.

Fluid and Electrolyte Problems, Transplantation, Renovascular Problems, and Nephrology That is Essential to Urology — In this section all types of fluid and electrolyte problems are covered. In those questions dealing with nephrology essential to urology, the candidate is asked about a number of conditions which are eventually treated by the nephrologist but which the urologist should be able to recognize.

Infectious Disease — All infections of the genitourinary tract are covered as well as a certain amount of basic bacteriology that is related to the diagnosis and treatment of infections of the genitourinary system. This area covers, to a measure, basic bacteriology as related to urology, immunology as related to urology, and all of the specific and nonspecific bacterial and viral infections as they may effect the genitourinary tract.

Gross Congenital Anomalies — Anomalies of the entire genitourinary system are covered. These include anomalies of all of the organs and systems normally treated by the urologist.

Obstructive Uropathy (Congenital and Acquired) Infectious Disease, Nephrology, Urinary Diversion, and Neoplasms as is Related Specifically to the Infant and Child — All of the obstructive lesions that might be found in an infant or child are covered. Pediatric nephrology that the urologist should be familiar with, at least to the extent that he can make the diagnosis, are covered. Urinary diversion in the infant and child is covered. All the neoplasms found in the infant and child, of a urologic nature are covered.

2. Part II—Certifying Examination

This examination will be given each year in February and all who have passed Part I, have a minimum of eighteen months in practice and who have been approved as candidates will be eligible to take Part II. It will consist of Pathology, Radiology and Oral examinations. The oral examination will consist of a discussion of urological problems. Subjects forming the basis of this examination include all phases of urography and clinical urology (men, women and children) encompassing metabolic, physiologic, biochemical and bacteriologic aspects of clinical urology. It will ascertain the candidate's familiarity with recent literature, the breadth of his clinical experience and his general qualifications for the practice of urology.

C. The professional adaptability of each candidate will be investigated in an attempt to determine his ethical conduct and his attitude toward his patients and fellow practitioners before taking Part II of the examination but shall not be a prerequisite to taking Part I.

Final Action of the Board

Final action concerning each applicant is made by the entire Board and is based on the applicant's training, his professional record, his attainments in the field of Urology, and the results of the examinations. This Board is organized not to prevent qualified urologists from obtaining certificates but to assist them in becoming recognized in their communities as men competent to practice in the special field of Urology. An appeals mechanism, however, is available to all applicants at any stage of the certification proceedings.

THE ACTIVITIES DESCRIBED IN THE FOREGOING PROCEED FROM THE CERTIFICATE OF INCORPORATION IN WHICH IS STATED THE NATURE OF THE BUSINESS, OBJECTS, AND PURPOSES PROPOSED TO BE TRANSACTED AND CARRIED OUT BY THIS CORPORATION.

Urology**Guidelines for Special Training**

While certificates of special competence in certain areas of Urology are not offered by the Board, it is recognized that special expertise in some aspects of the discipline may be achieved through an organized program of study, practice and exposure, which is in addition to formal residency training. The Board has established guidelines for such special training programs in the fields of Pediatric Urology, Renal Transplantation, Urologic Oncology, and Male Infertility. These guidelines and others to be developed in the future can be obtained by program directors and prospective trainees from the office of The American Board of Urology, Inc.

Revocation of Certificate

Certificates issued by this Board are subject to the provisions of the Articles of Incorporation and the By-laws. According to Article IX, Section 4, of the By-laws: "Each Certificate shall be subject to revocation in the event that:

A. The issuance of such certificate or its receipt by the physician so certified shall have been contrary to, or in violation of, any provision of the Certificate of Incorporation of this, The American Board of Urology, Inc., or of the By-laws; or

B. The physician or party certified shall not have been eligible to receive such certificate, irrespective of whether or not the facts constituting him so ineligible were known to, or could have been ascertained by, the directors of the Board at the time of issuance of such certificate; or

C. The physician or party so certified shall have made any misstatement of fact in his application for such certificate or in

any other statement or representation to the Board or its representatives; or

D. The physician so certified at any time while continuing to practice, shall cease to practice Urology; or

E. The physician so certified shall at any time have neglected to maintain the degree of competency in the practice of the specialty of Urology as set up by the Board, and shall refuse to submit to re-examination by the Board; or

F. The physician so certified has been found to be guilty of unethical practices or immoral conduct or of conduct leading to revocation of his license."

The Board of Trustees of this Corporation shall have the sole power, jurisdiction and right to determine and decide whether or not the evidence or information before it is sufficient to constitute one of the grounds for revocation of any certificate issued by this corporation. The Board of Trustees, may, however, in its discretion, require any physician so certified to appear before the Board of Trustees or before any one or more of them or before any individual or individuals designated by the Board of Trustees, upon not less than twenty (20) days written notice, and to show cause, at the time and place specified in such notice, why his certificate should not be revoked upon any one or more of the above-described grounds specified in such notice. The failure of any physician so notified to appear as required in such notice, without due excuse deemed sufficient to the Board of Trustees, shall constitute, *ipso facto*, cause for revocation of his certificate. The decisions of the Board of Trustees relating to all matters under this Section 4 shall be final and binding.

APPENDIX D
MEDICAL LICENSURE REQUIREMENTS

MEDICAL LICENSURE REQUIREMENTS

The following information has been provided by Lorna Wunderman of the staff of the AMA Center for Health Services Research and Development in cooperation with Arthur Osteen, Ph.D. of the Department of Physician Credentials and Qualification. The four tables are taken (with post publication corrections) from "Physician Distribution and Medical Licensure in the U.S., 1978," published by the AMA.

Policies for Initial Medical Licensure for Graduates of U.S. Medical Schools

The initial medical license of most U.S. medical school graduates is granted by endorsement of their National Board Certificates. All licensing jurisdictions, except Louisiana, Texas, and the Virgin Islands, will endorse certificates from the National Board. Texas will accept a National Board certificate earned prior to January 1, 1978, but not one earned after that date. Those graduates who are not licensed by endorsement of a National Board certificate, must pass the Federation Licensing Examination (FLEX) which is used by all states as their medical licensing examination. In many states the certificate of the National Board of Examiners for Osteopathic Physicians and Surgeons can be endorsed for licensure. Boards of medical examiners in Massachusetts, Oregon, Pennsylvania, Virginia, and West Virginia will endorse U.S. specialty board certificates for licensing purposes in specific circumstances as delineated by the licensure regulations of those states.

Policies for Licensure of Graduates of Foreign Medical Schools

Most of the state medical boards will accept graduate training in Canada as equivalent to training undertaken in the U.S. Twenty-seven states will issue a medical license to a graduate of a Canadian medical school who holds a license in one of the provinces of Canada. Graduates of foreign medical schools who hold a Licentiate Medical Council of Canada certificate are evaluated for licensure in twelve states on the same basis as graduates of U.S. schools.

In the most recent survey (June, 1979) conducted by the AMA Department of Physician Credentials and Qualification forty-seven states have indicated they will license foreign medical graduates who hold a Fifth Pathway certificate.¹

Foreign educated candidates for licensure are permitted by twenty-three state boards to take the FLEX before they have had graduate training in either a U.S. or Canadian hospital. In most cases, however, candidates are not awarded a license until they have training in the U.S. and have met other specific requirements of the individual boards, e.g., an Educational Commission on Foreign Medical Graduates (ECFMG) certificate, personal interview, etc. Tables 1, 2 and 3 on the following pages summarize the licensure policies of state boards.

It is strongly recommended that candidates contact the specific state board for the most current information on licen-

sure requirements in that state. Names and addresses of the corresponding officers are listed in Table 4 of this Appendix.

Restricted Licenses and Educational Permits

Forty-eight boards provide for the issuance of educational permits, limited and temporary licenses, or other certificates for the restricted practice of medicine. The terms for the issuance of such certificates vary. Such certificates may be issued (1) for hospital training of those eligible for licensure, (2) for supervised employment in state or private hospitals, and (3) for full-time practice until the next regular session of the licensing board. These permits must generally be renewed once a year with a stipulated maximum number of renewals allowed (usually five years).

Visa Qualifying Examination

Amendments to the Immigration and Nationality Act made through Public Law 94-484, the Health Professions Educational Assistance Act of 1976, establish new requirements for the admission of alien physicians to the United States, whether for permanent residency or for participation in graduate medical education training programs. The amendments require that alien graduates of foreign medical schools pass Parts I and II of the National Board of Medical Examiners examination, or an examination determined by the Secretary of Health, Education, and Welfare, to be the equivalent. The amendments also require that alien medical graduates demonstrate competence in oral and written English.

The Secretary of Health, Education, and Welfare has determined that the Visa Qualifying Examination (VQE), which is prepared by the National Board of Medical Examiners and administered by the Educational Commission for Foreign Medical Graduates, is the equivalent of Parts I and II of the National Board of Medical Examiners examination for purposes of the amendments to the Immigration and Nationality Act. This examination, which lasts for two days and is composed of equal proportions of clinical science and basic science questions in a multiple choice format, is given once a year at a limited number of examination centers abroad and in the United States. Applications for the examination and questions about it and about demonstrating English language competence should be addressed to the Educational Commission for Foreign Medical Graduates, 3624 Market Street, Philadelphia, Pennsylvania 19104, U.S.A.

The new amendments to the Immigration and Nationality Act are not applicable to graduates of foreign medical schools who are citizens of the United States, are already lawful permanent residents of the United States, or who seek such residence as the parents, spouses, children, brothers, or sisters of United States citizens, or as the spouses or unmarried children of lawful permanent residency aliens of the United States. Questions concerning whether an alien medical graduate is required to take the VQE should be addressed to American Embassies and Consulates General abroad.

¹For an explanation of the Fifth Pathway, see Section I, of this DIRECTORY.

MEDICAL LICENSURE REQUIREMENTS

TABLE 1
 POLICIES OF STATE BOARDS OF MEDICAL EXAMINERS
 FOR INITIAL LICENSURE FOR GRADUATES
 OF U.S. MEDICAL SCHOOLS

State	Written Exam	Endorsement of National Boards (NB)	Length of Time NB's are endorsed?	Graduate Training Required	No. of Yrs. of Graduate Training Required

Yes—Implies yes.

No—Implies no or no requirement.

¹—Plus the cost of FLEX.

ALABAMA: Foreign physicians must have completed an AMA residency program, obtained an ECFMG certificate, appear for a personal interview, and be board eligible or board certified by an American specialty board.

ARIZONA: Two years of approved graduate training in US or Canadian hospitals required.

CALIFORNIA: Noncitizens—1 year residency in an approved hospital in California after passing written examination, or specialty board certification based on US or Canadian training.² With Declaration of intention—four years engaged in the practice of medicine in US hospitals approved for post-graduate training or board certification as above. US

²with no more than one year of training in another country.

citizens—1 year of residency in an approved hospital in the US. Written (FLEX) and oral and clinical examination required of all FMGs. US Citizens with diplomas from Mexican medical schools must complete an approved "special supervised clinical internship" program and pass written examination.

COLORADO: Credentials may be submitted in original form and accompanied by translation. Three years of approved graduate training.

DISTRICT OF COLUMBIA: Considered on individual basis.

FLORIDA: One year of AMA approved training or 5 years licensed practice in another state or country. ECFMG certificate waived if physician has US specialty board certificate and has 4 years of meritorious practice in another state in 5 years preceding application or prior to his establishment of residence in Florida.

GEORGIA: Must have lived in the US 1 year and completed 1 year of post-graduate training.

GUAM: Legal residence for 1 year required.

IDAHO: Considered on an individual basis.

ILLINOIS: Considers application on an individual basis for graduates of schools not on approved list. Candidate can take FLEX without US training at the discretion of the Board.

INDIANA: Must have 2 years approved graduate training in US to become licensed, but residency not required to take exam; or can serve a 2 year perceptorship in Indiana.

IOWA: The medical examiners may accept in lieu of a diploma from a school of medicine approved by this board all the following: (a) a diploma issued by a medical college which has been neither approved nor disapproved by the medical examiners; (b) completion of 2 years of training as a resident physician which training has been approved by or is acceptable to the medical examiners, and (c) recommendations of the ECFMG.

KANSAS: Medical school transcripts and certificate that the college is recognized by authorities of such foreign country as qualifying its graduates for practice therein; diploma from such college; certificate of licensure in the country where graduated; all documents to be translated into English and certified by the consul.

LOUISIANA: Must have had 3 years AMA approved graduate training in US or Canadian hospitals.

MAINE: Fifth Pathway students considered on same basis as FMGs with ECFMG certificate.

MINNESOTA: FLEX exam may be taken without US training if candidate has been accepted in recognized training program.

MISSISSIPPI: Reciprocity with other states when licensed on the basis of FLEX with grade of at least 75 obtained at a single sitting of FLEX and/or with diplomates of the National Board Medical Examination.

MONTANA: Considered on individual basis.

NEBRASKA: One year approved residency in US or Canadian hospital required.

NEVADA: Three years postgraduate training satisfactory to the board, one year of which is approved residency in a US or Canadian hospital.

NEW HAMPSHIRE: Proof of a commitment to practice in the State of New Hampshire. Permits partial retake of FLEX if original taken in New Hampshire. Must serve at least 2 years residency in approved hospital in US.

NEW JERSEY: Candidates required to have not less than 1 year training in a hospital approved by the board.

NEW MEXICO: A graduate of a foreign medical school may be granted a license by endorsement at the discretion of the New Mexico board of Medical Examiners in the same manner if the applicant had graduated from a medical college located in the United States or its possessions.

NEW YORK: ECFMG or equivalent plus 1 or 2 years approved hospital training required.

NORTH CAROLINA: FMGs must take North Carolina examination.

NORTH DAKOTA: Considered on an individual basis.

OHIO: Must serve at least 2 years residency in approved hospital in this country.

OREGON: Must show evidence of internship and/or residency of not less than 2 years in not more than two hospitals approved for such training. Less than an unqualified recommendation from the heads of these training programs shall preclude further consideration.

PENNSYLVANIA: Graduates of foreign medical schools who are Board certified are considered on an individual basis.

RHODE ISLAND: Two years of graduate training in an approved hospital in US or Canada are required.

SOUTH CAROLINA: Permits candidates to take FLEX without US training if the candidate has been accepted in a current training program.

TENNESSEE: Each applicant considered on an individual basis following 1 year of training.

TEXAS: All foreign-trained physicians must appear for personal interview and present original documents. Applications with questionable credentials must appear before entire board. Specialty board certificate may be substituted for ECFMG certificate.

VIRGIN ISLANDS: Residence of 6 months required.

VIRGINIA: One year of accredited hospital training in approved hospital in the US or Canada.

WEST VIRGINIA: Original medical school diploma and official translation. Original ECMFG certificate.

WYOMING: Oral examination required. Considered on individual basis. Partial retake of FLEX is at the discretion of the Board.

TABLE 4

CORRESPONDING OFFICERS OF BOARDS OF MEDICAL EXAMINERS IN THE UNITED STATES AND POSSESSIONS

Alabama: Robert Parker, M.D., Executive Secretary, Alabama State Board of Medical Examiners, P.O. Box 946, Montgomery 36102.

Alaska: Byron Perkins, Licensing Examiner, Department of Commerce & Economic Development, Division of Occupational Licensing, State Medical Board, Pouch D, Juneau 99811.

Arizona: Mr. Paul R. Boykin, Executive Director, Arizona Board of Medical Examiners, 810 W. Bethany Home Road, Phoenix 85013.

Arkansas: Joe Verser, M.D., Secretary, Arkansas State Medical Board, P.O. Box 102, Harrisburg 72432.

California: Mr. Robert G. Rowland, Executive Secretary, California Board of Medical Quality Assurance, 1430 Howe Ave., Sacramento 95825.

Colorado: Mrs. Lorreta W. Arduser, Secretary to the Board, Board of Medical Examiners, 1525 Sherman Street, Denver 80202.

Connecticut: Mr. Stephan A. Harriman, Executive Director, Board of Medical Examiners, 79 Elm St., Hartford 06115.

Delaware: Ms. Mary Jane Clark, Adm. Asst. Board of Medical Practice of Delaware, Board of Medical Examiners, Jesse S. Cooper Bldg., Room 233, Dover 19901.

District of Columbia: P. Joseph Sarnella, Commission on Licensure, 614 H St., NW, Washington, D.C. 20001.

Florida: George S. Palmer, M.D., Executive Director, Board of Medical Examiners, 2009 Apalachee Parkway, Suite 220, Oakland Bldg., Tallahassee 32301.

Georgia: Mr. C. L. Clifton, Executive Director, Composite State Board of Medical Examiners, 166 Pryor Street, S.W., Room 300, Atlanta 30303.

Guam: Joaquin C. Camacho, Commission on Licensure to Practice the Healing Art, Guam Memorial Hospital, P.O. Box AX, Marianas Islands, Agana 96910.

Hawaii: Mr. Bert M. Tonasu, Board of Medical Examiners, 1010 Richards St., Honolulu 96813.

Idaho: Mr. Donald L. Deleski, Executive Secretary, State Board of Medicine, P.O. Box 6817, Boise 83707.

Illinois: James D. Nowland, Acting Director, Department of Registration and Education, 320 W. Washington, Springfield 62786.

Indiana: Isadore J. Kwitny, M.D., Medical Licensing Board of Indiana, 700 N. High School Road, Suite 201, Indianapolis 46224.

Iowa: Mr. Ronald V. Saf, Executive Director, Board of Medical Examiners, 910 Insurance Exchange Bldg., Des Moines 50309.

Kansas: Elizabeth W. Carlson, Executive Secretary, Board of Medical Examiners, 503 Kansas Avenue, Suite 500, Topeka 66603.

Kentucky: Mr. C. Wm. Schmidt, Ass't. Secretary, State Board of Medical Licensure, 3532 Ephraim McDowell Drive, Louisville 40205.

Louisiana: J. Morgan Lyons, M.D., Secretary-Treasurer, Louisiana State Board of Medical Examiners, 621 Hibernia Bank Bldg., New Orleans 70112.

Maine: George E. Sullivan, M.D., Secretary, Board of Medical Examiners, 100 College Avenue, Waterville 04901.

Maryland: Arthur T. Keefe, Jr., M.D., Board of Medical Examiners, 201 W. Preston Street, 5th Floor, Baltimore 21201.

Massachusetts: C. E. Cassidy, M.D., Secretary, Massachusetts Board of Registration & Discipline in Medicine, 100 Cambridge St., Room 1511, Boston 02202.

Michigan: Bert C. Brennan, Executive Director, Michigan Board of Medicine, 905 Southland, P.O. Box 30018, Lansing 48909.

Minnesota: Arthur W. Poore, Executive Secretary, Board of Medical Examiners, 717 Delaware St., S.E., Room 352, Minneapolis 55414.

Mississippi: Frank J. Morgan Jr., M.D., Asst. State Hlth. Officer for Licensure, State Board of Health, P.O. Box 1700, Jackson 39205.

Missouri: Mr. Gary Clark, Executive Secretary, Board of Registration for the Healing Arts, P.O. Box 4, Jefferson City 65102.

Montana: Mrs. Dixie J. Heisey, Secretary, Board of Medical Examiners, LaLonde Bldg., Helena 59601.
